CONCLUSIONS

The postpartum period is described as the time immediately following birth. During this period, the cow must be prepared for the next lactation and the next period of pregnancy. The postpartum period is critical for the health and productivity of the cow.

MATERIALS AND METHODS - PRAK

During the postpartum period, the cow needs to be carefully monitored and managed to ensure its health and productivity. This includes providing adequate nutrition, housing, and veterinary care.

RESULTS

Throughout the postpartum period, the cow's health and productivity can be monitored using various indicators, including milk production, weight gain, and reproductive performance.

INTRODUCTION

In conclusion, the postpartum period is a critical time for the cow, and careful management during this period can have a significant impact on its health and productivity.
