Abstract

Hanoi province, Vietnam has much potential for agricultural development such as large consumer market for agricultural products, soil and water resources, naturalimate, physical and social infrastructure, and so on. Hanoi is also one of provinces of the whole country where has attracted a larger number of investors. However, there is a w of investment projects in agriculture in Hanoi in recent years. This paper presents a suit of the structure interview for managers of 200 samples including agricultural firms, -operatives and farms in Hanoi province in 2008-2009. The finding shows that even ese enterprices are happy with their business performances and profitability, the vestment climate could be negative effects obstructing investment incentives in riculture. The study finds out 8 key factors determining the investment climate in agriculture in Hanoi province. The constraints are ranked by the interviewees from the guest to the lowest to be land issue, provincial policies for agriculture, capital, physical infrastructure, administrative procedures, market, technology and labor issue. In which nd issues and provincial agricultural policies are the most important constraints; the cond group are capital, physical infrastructure, governmental administration; the third e market, technology, and labor issues.
