

WP4 - Task 4.2

Parallel measurements of formaldehyde
(H₂CO) at the Jungfraujoch station:
Preliminary FTIR results and first
comparison with MAXDOAS data

1. INTRODUCTION

The Jungfrauoch station (Swiss Alps, 46.5° N, 8.0° E, 3580m a.s.l.)

- Site of the NDACC network
- Ground-based FTIR measurements performed year-round
- Using high-resolution FTIR spectrometer BRUKER 120HR
- Remote operation of the BRUKER instrument since late 2008

1. INTRODUCTION

The Jungfrauoch station (Swiss Alps, 46.5° N, 8.0° E, 3580m a.s.l.)

- Site of the NDACC network
- Ground-based FTIR measurements performed year-round
- Using high-resolution FTIR spectrometer BRUKER 120HR
- Remote operation of the BRUKER instrument since late 2008

- FTIR regular cloud-free observations since 1984, ~ 120 days yr^{-1} on average since the mid-1990s
- grating spectra recorded from 1976 to 1989, covering narrow IR intervals

→ more than 35 years of uninterrupted IR monitoring in the Alps
→ more than two dozen stratospheric and/or tropospheric retrieved species

1. INTRODUCTION

Formaldehyde: H₂CO

- Sources → photochemical oxidation of CH₄ and other carbonic compounds
- Sinks → photolysis, oxidation by OH and deposition
- Lifetime → a few hours
- Absorption → very weak in IR domain (< 1%)

1. INTRODUCTION

Formaldehyde: H₂CO

- Sources → photochemical oxidation of CH₄ and other carbonic compounds
- Sinks → photolysis, oxidation by OH and deposition
- Lifetime → a few hours
- Absorption → very weak in IR domain (< 1%)

FTIR and MAX-DOAS observations of H₂CO at Réunion Island (21° S, 55° E)

Vigouroux et al., Atmos. Chem. Phys., 9, 9523-9544, 2009.

Microwindows (cm⁻¹)

2763.425 – 2763.600

2765.725 – 2765.975

2778.200 – 2778.590

2780.800 – 2781.150

2810.000 – 2810.350

2855.650 – 2856.400

Largely influenced by **biomass burning and fossil fuel combustion**

Jungfraujoch station (46.5° N, 8.0° E, 3580m a.s.l.)

→ 2833.070 – 2833.350 cm⁻¹
Tunable optical filter improving the S/N ratio since 2005

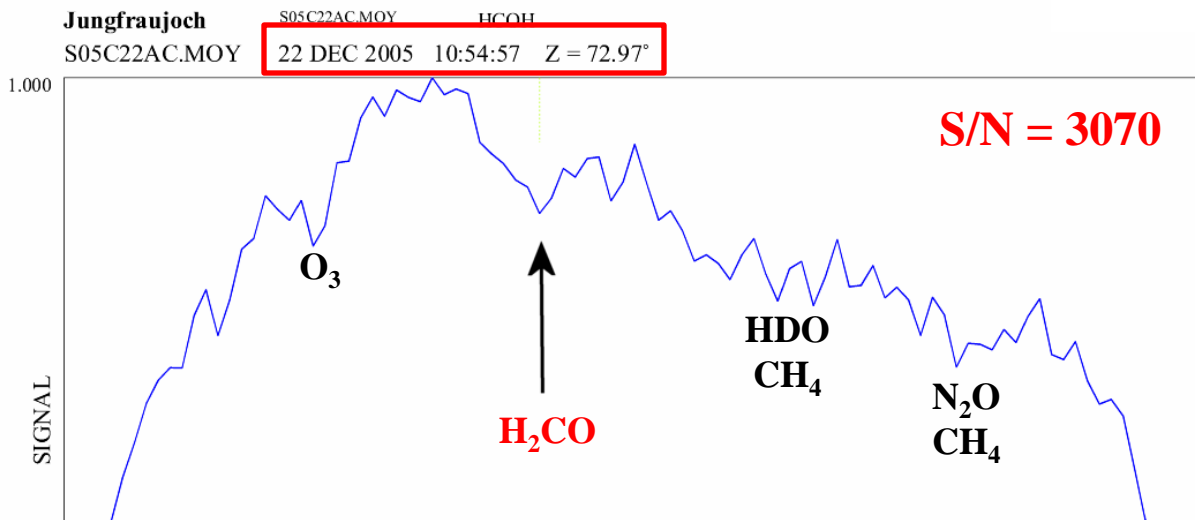

2. RETRIEVAL STRATEGY

Broad bandpass optical filter

- from 2400 to 3000 cm⁻¹
- aperture = 1.1 mm

2. RETRIEVAL STRATEGY

Broad bandpass optical filter

- from 2400 to 3000 cm⁻¹
- aperture = 1.1 mm

Narrow bandpass optical filter

- from 2810 to 2850 cm⁻¹
- aperture = 1.45 mm

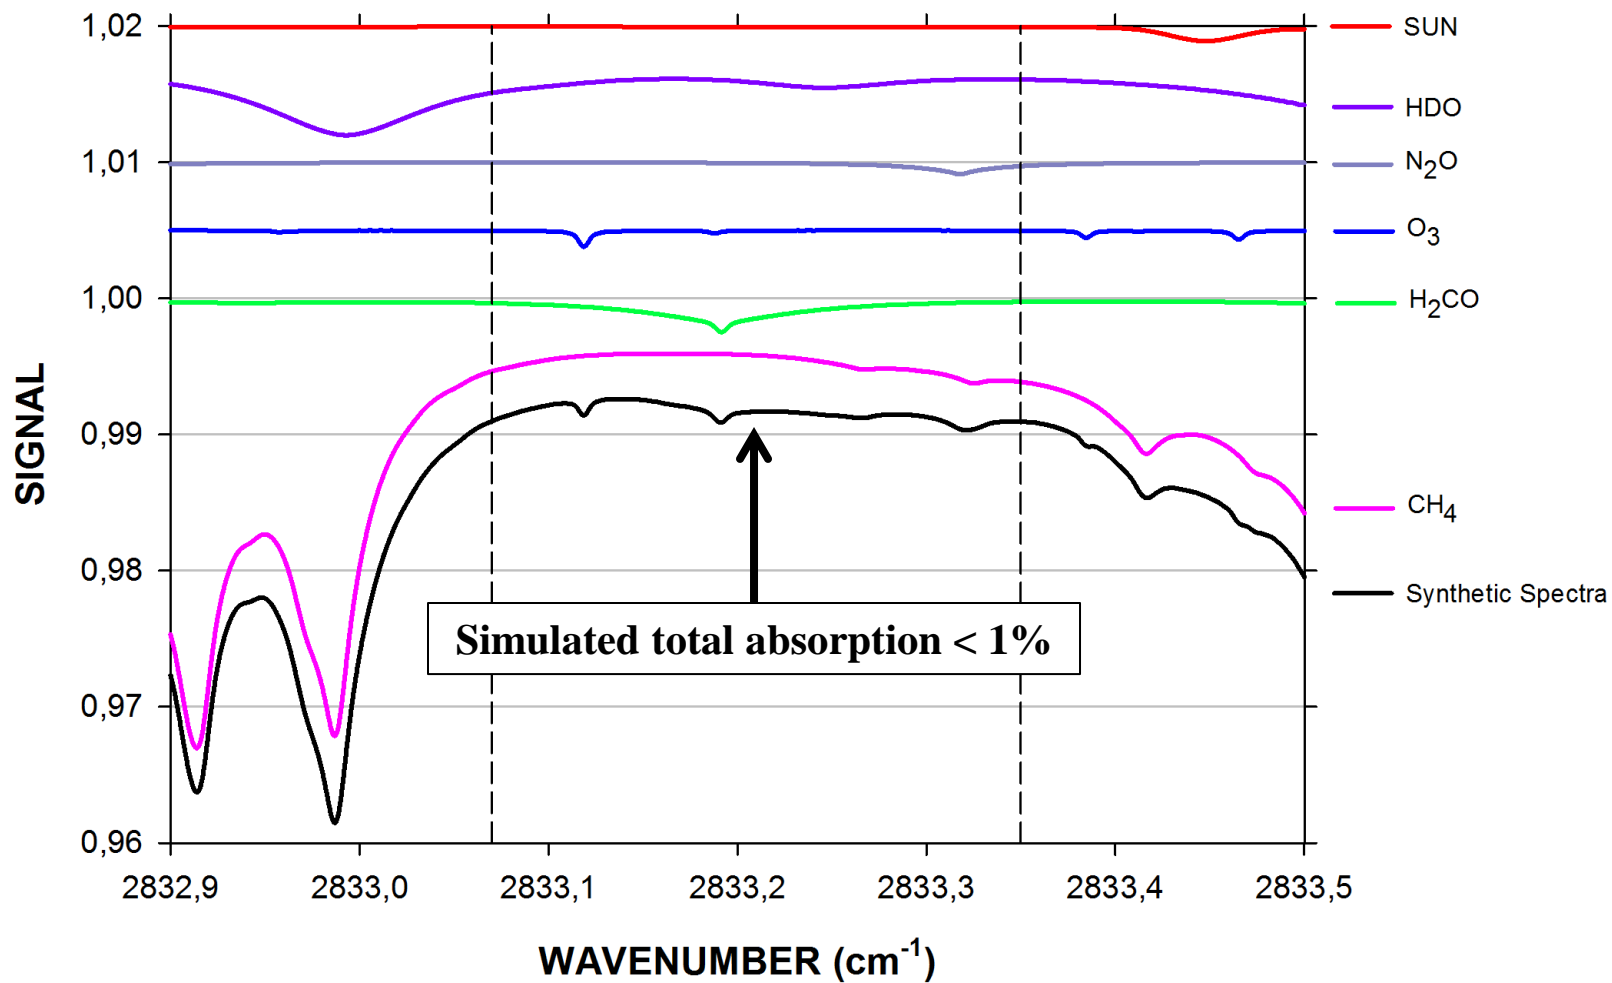

Enhanced S/N ratio

2. RETRIEVAL STRATEGY

Simulation of formaldehyde window at the Jungfraujoch station

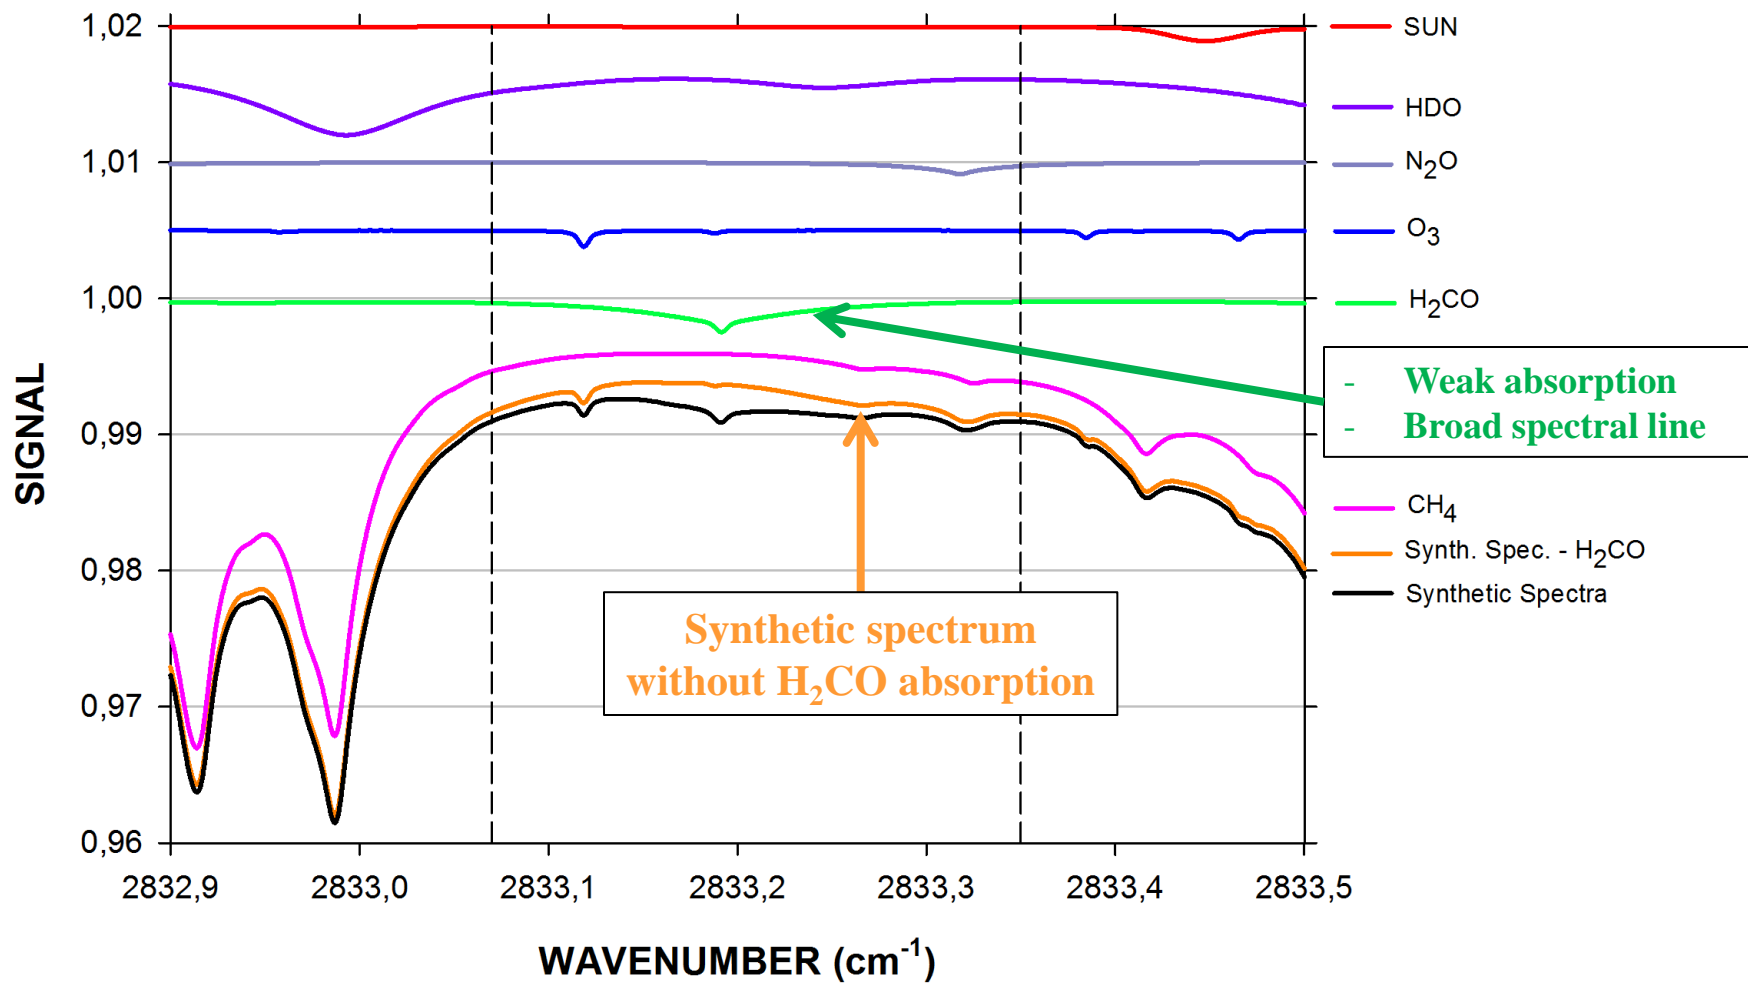

Jan 21st 2010 - SZA = 70°

2. RETRIEVAL STRATEGY

Simulation of formaldehyde window at the Jungfraujoch station

Jan 21st 2010 - SZA = 70°

2. RETRIEVAL STRATEGY

Simulation of formaldehyde window at the Jungfraujoch station

Jul 11th 2010 - SZA = 80°

H₂CO retrieval strategy at the Jungfraujoch station

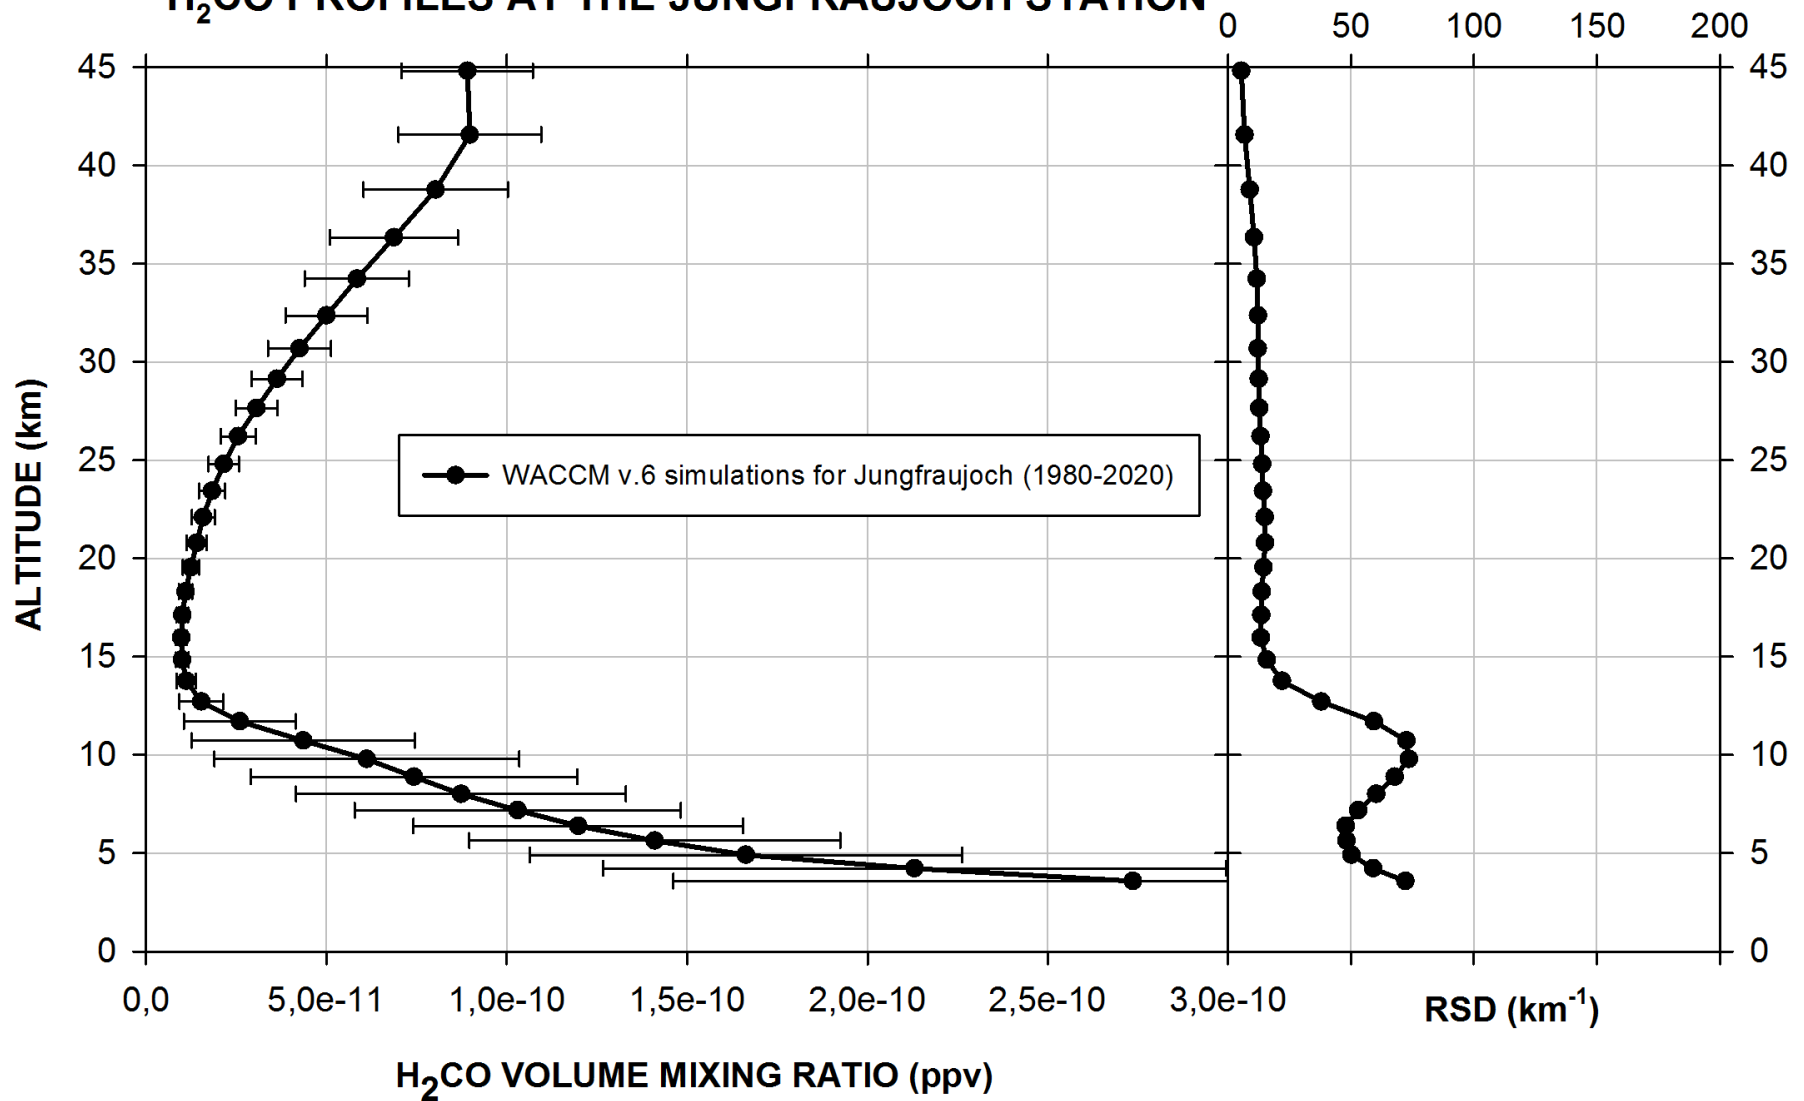

- Retrieval with the SFIT-2 algorithm (v3.91)
- Microwindow: 2833.070 – 2833.350 cm⁻¹
- Spectral resolution: 0.005 cm⁻¹
- Interfering species: CH₄, HDO, O₃ and N₂O
- Spectroscopic parameters:
 - HITRAN 2004 for interfering species
 - HITRAN 2008 for H₂CO
- Data set: 2343 solar spectra from December 2005 to April 2013

A priori profile ?

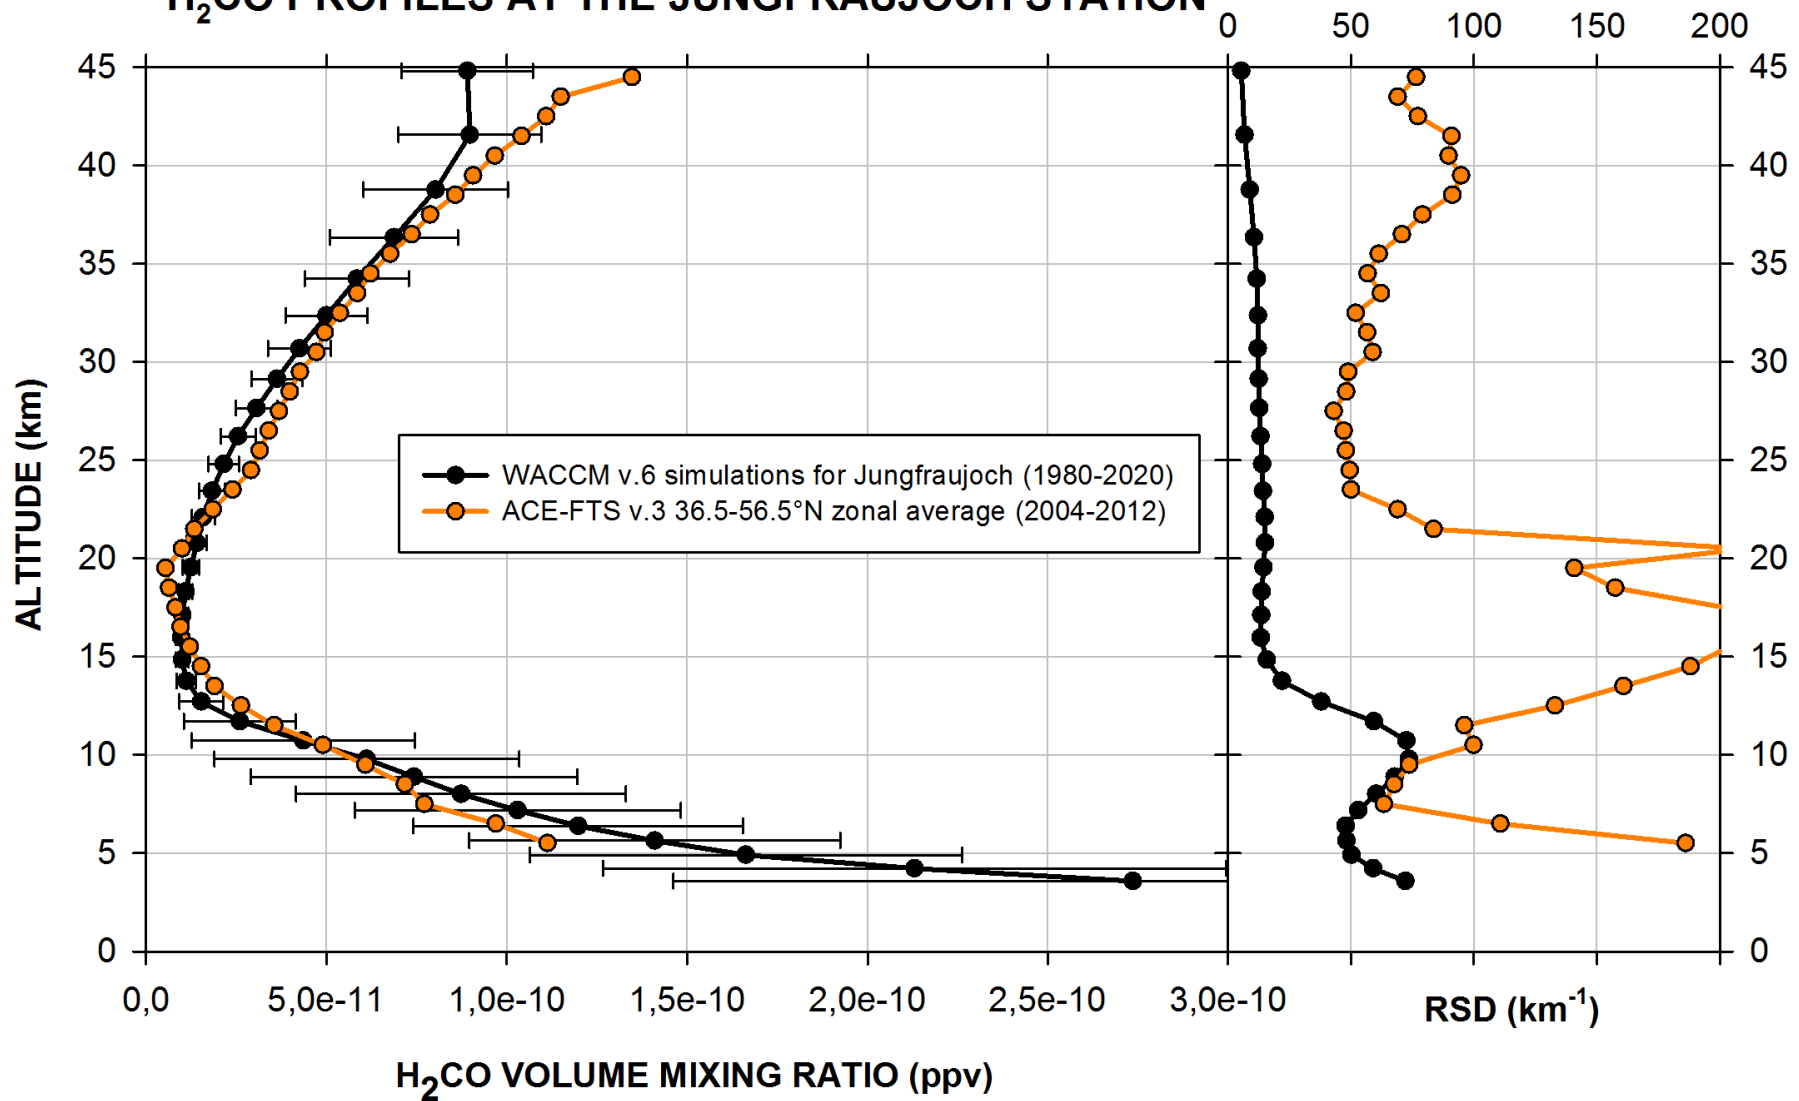

2. RETRIEVAL STRATEGY

H₂CO PROFILES AT THE JUNGFRAUJOCH STATION

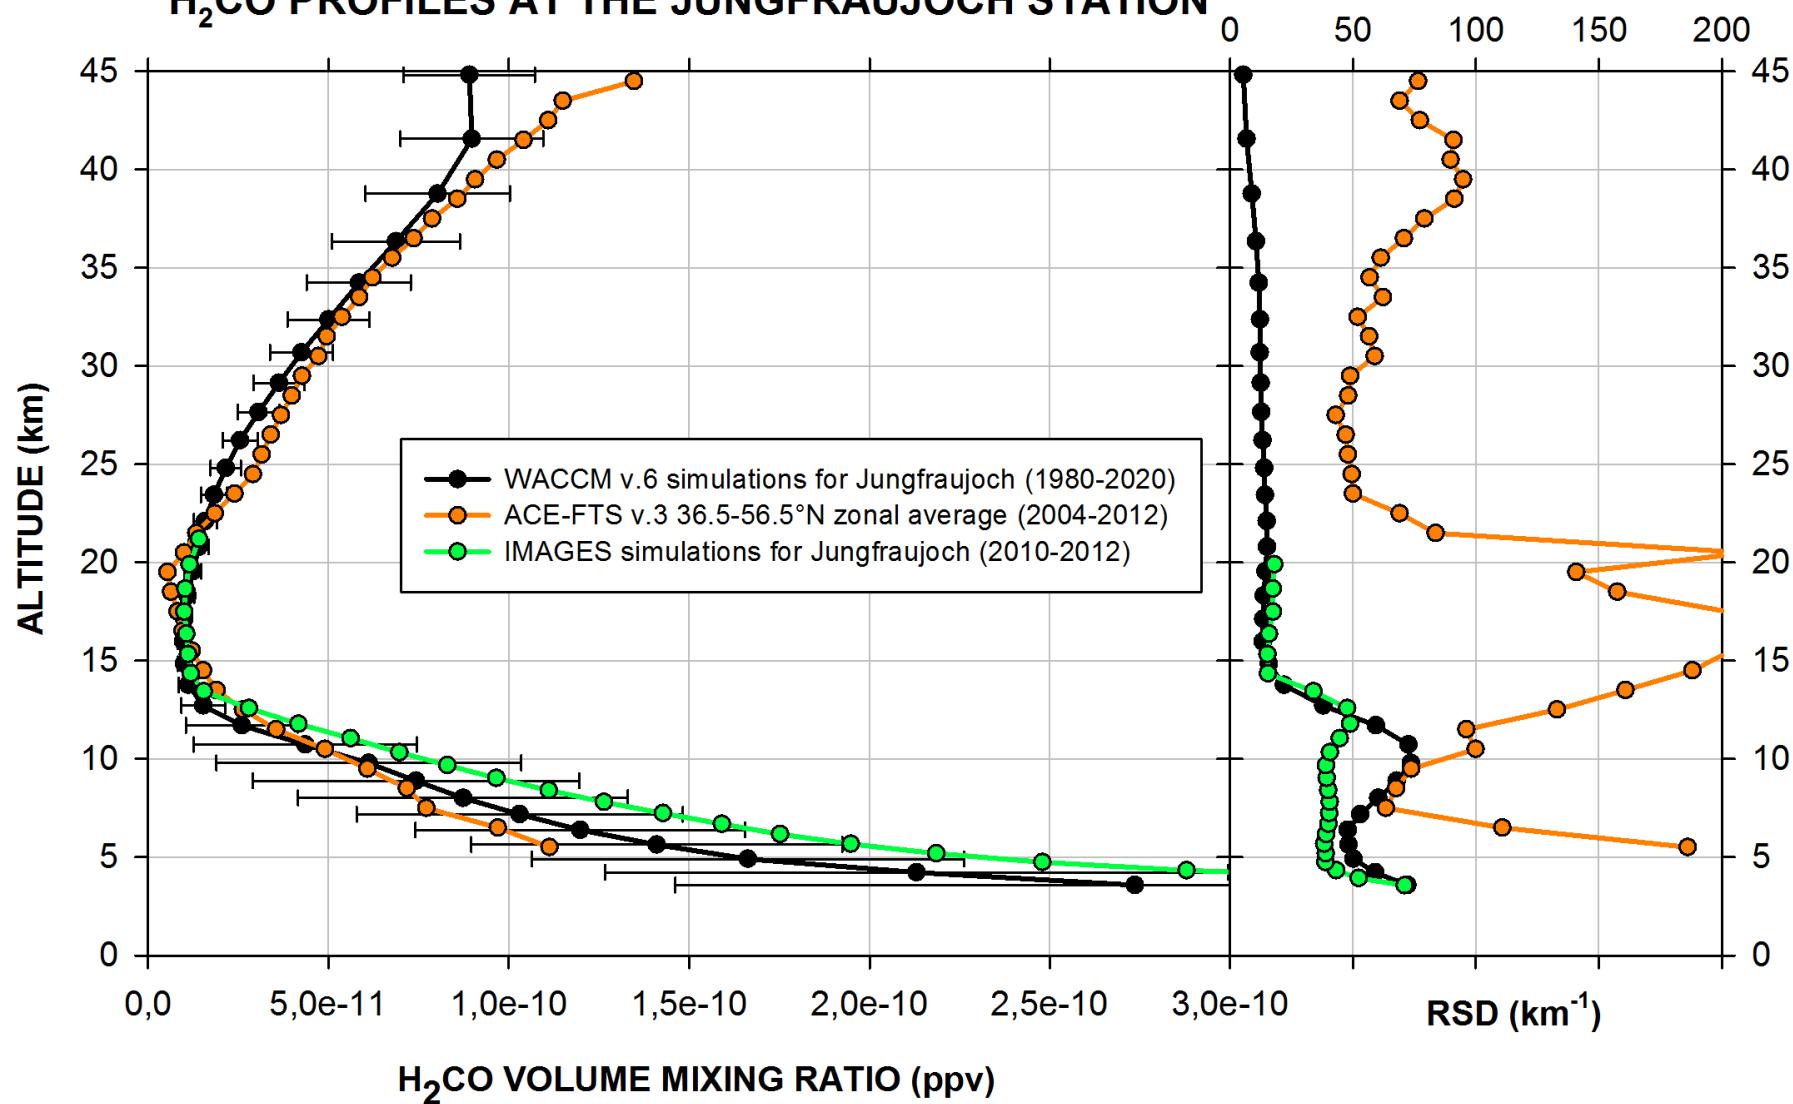

2. RETRIEVAL STRATEGY

H₂CO PROFILES AT THE JUNGFRAUJOCH STATION

2. RETRIEVAL STRATEGY

H₂CO PROFILES AT THE JUNGFRAUJOCH STATION

H₂CO retrieval strategy at the Jungfraujoch station

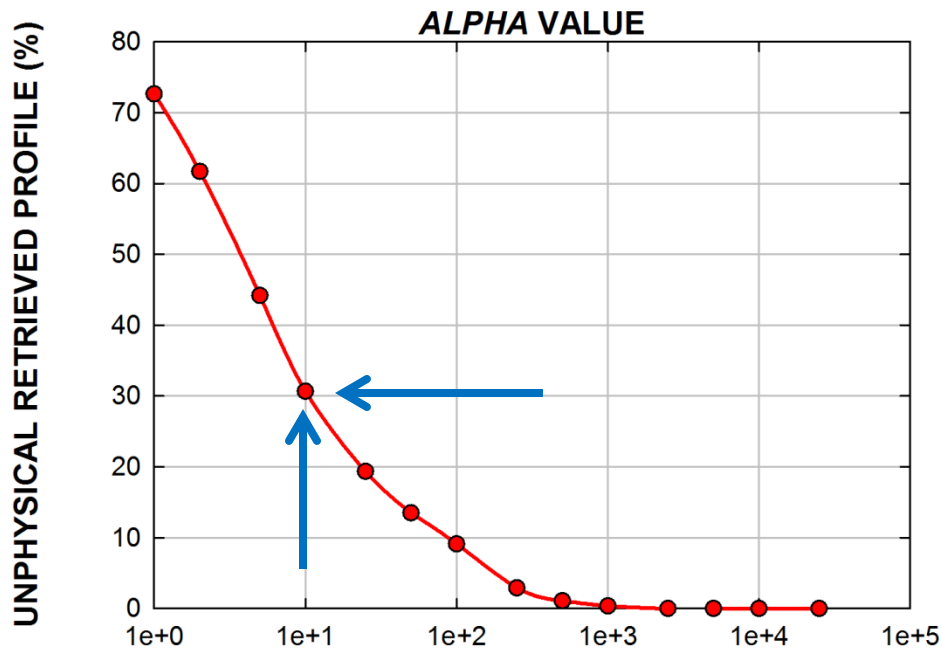

- Retrieval SFIT-2 algorithm (v3.91)
- Microwindow: 2833.070 – 2833.350 cm⁻¹
- Spectral resolution: 0.005 cm⁻¹
- Interfering species: CH₄, HDO, O₃ and N₂O
- Spectroscopic parameters:
 - HITRAN 2004 for interfering species
 - HITRAN 2008 for H₂CO
- Data set: 2343 solar spectra from December 2005 to April 2013
- *A priori* profile from WACCM v.6

Tikhonov type L_1 regularization

Constraint matrix **$\mathbf{R} = \alpha \mathbf{L}_1^T \mathbf{x} \mathbf{L}_1$**

2. RETRIEVAL STRATEGY

Determination of α (regularization strength)
based on H₂CO retrievals for 2010

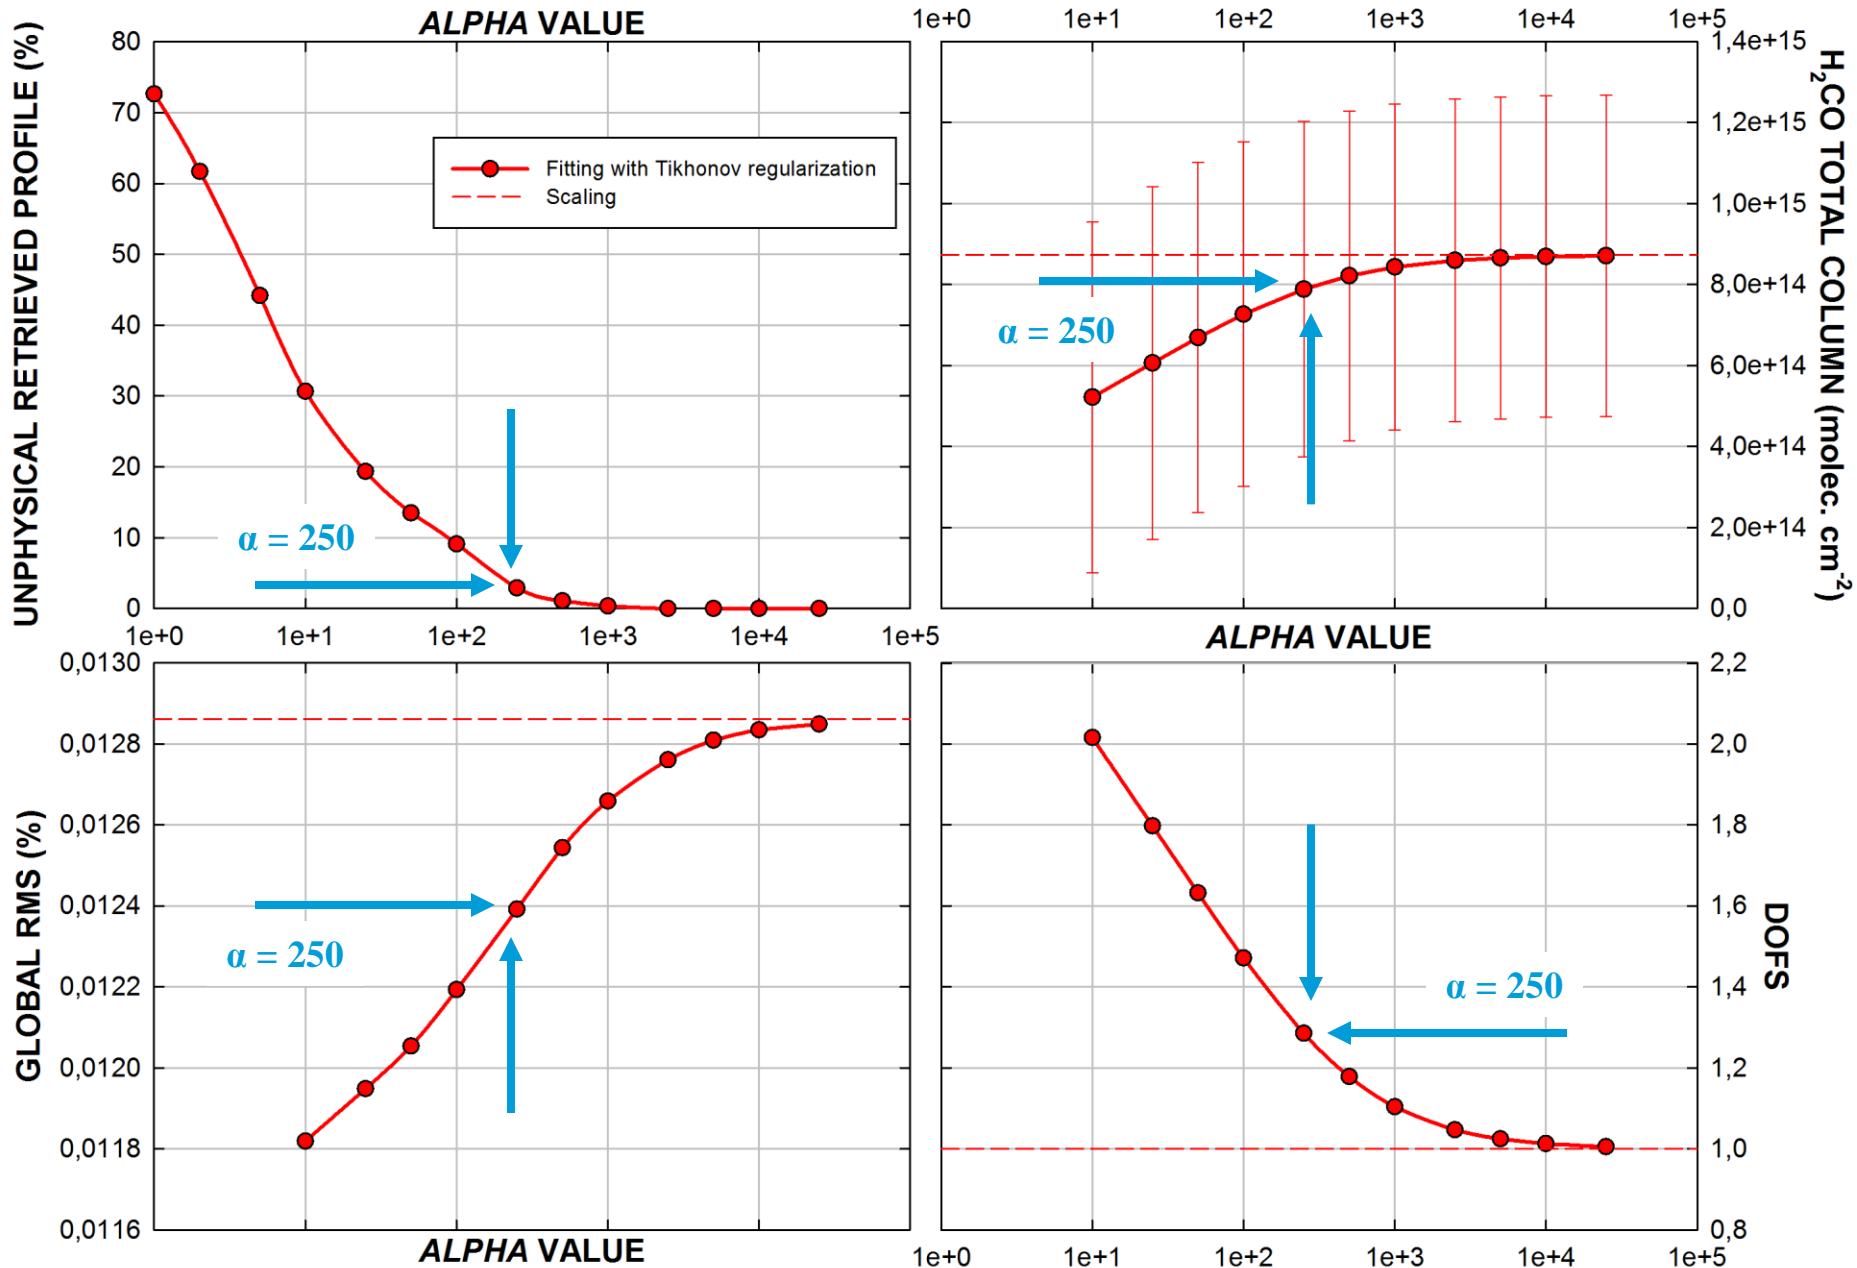

↓
274 solar spectra

→ New subset: spectra with « positive »
retrieved profile only, when using $\alpha = 10$

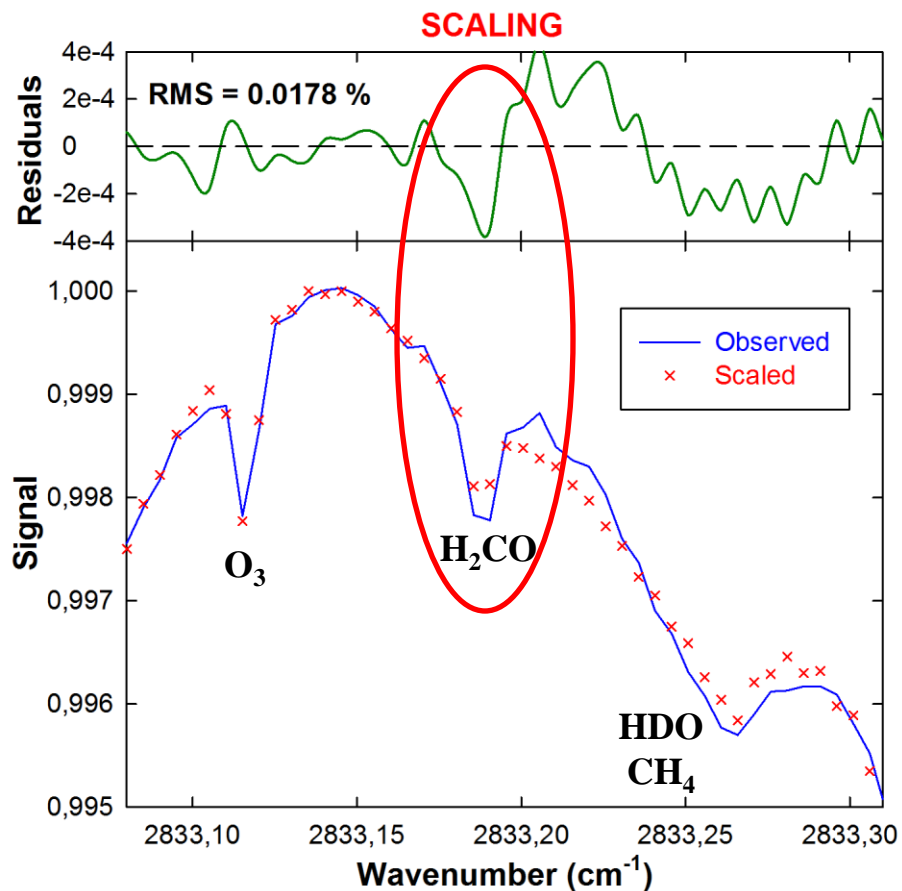

2. RETRIEVAL STRATEGY

2. RETRIEVAL STRATEGY

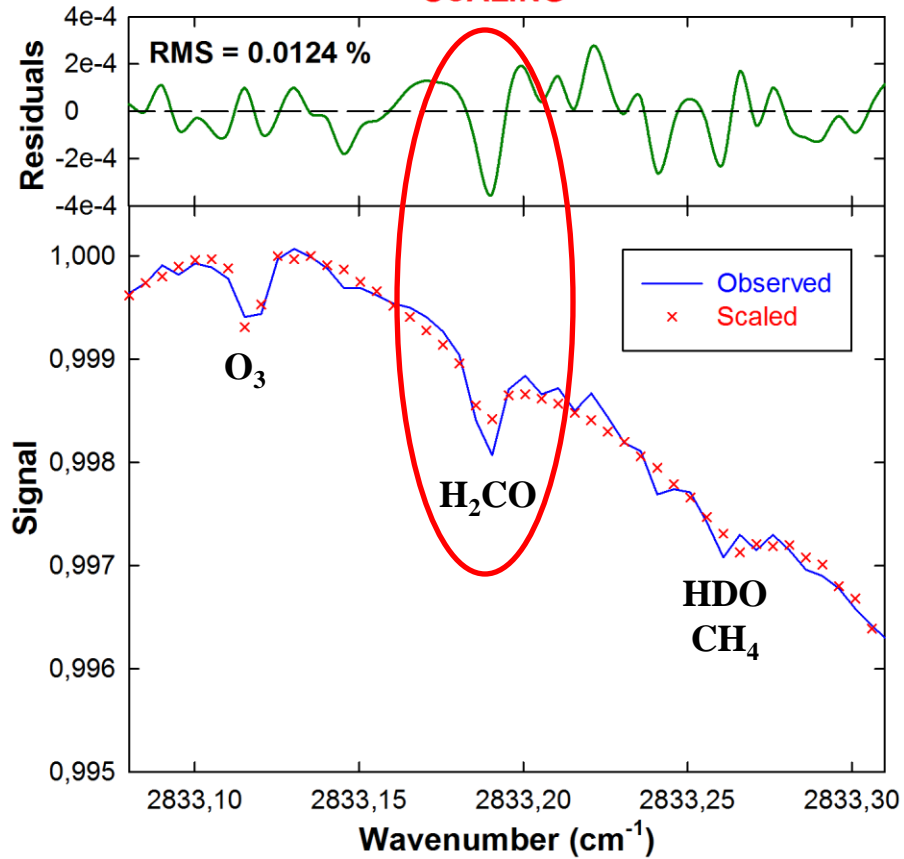

3. PRELIMINARY RESULTS

June 23rd 2010 – SZA = 77° - S/N = 17354

3. PRELIMINARY RESULTS

SCALING

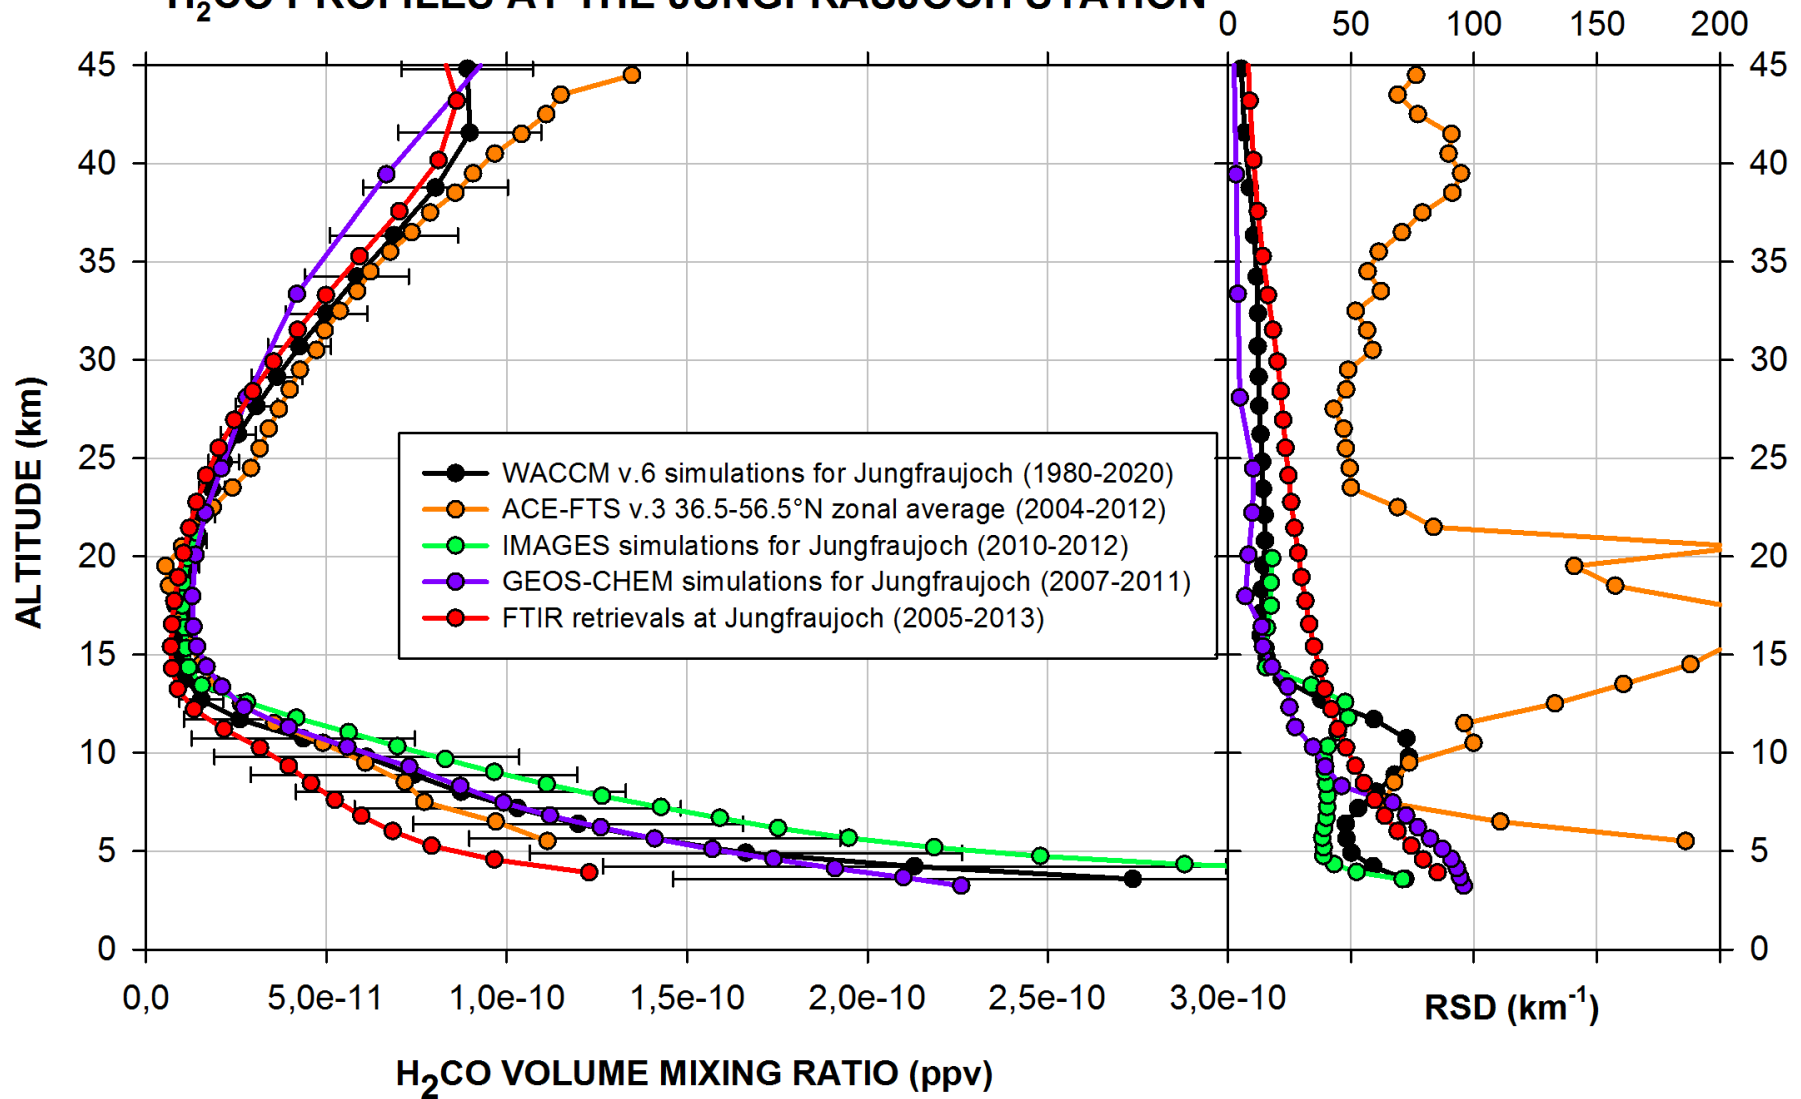

FITTING WITH TIKHONOV REGULARIZATION

October 18th 2010 - SZA = 61° - S/N = 9701

3. PRELIMINARY RESULTS

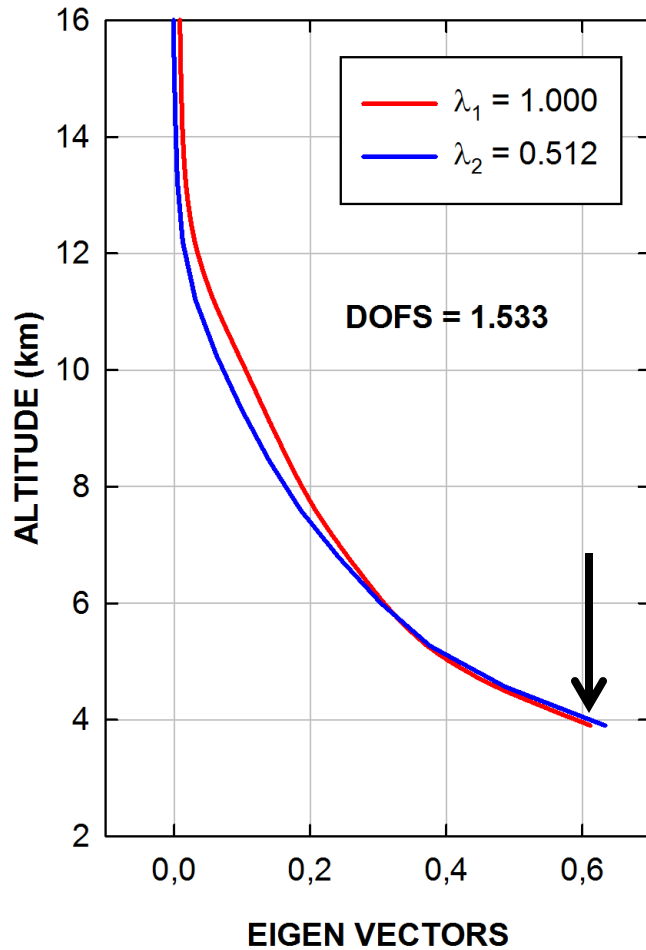

H₂CO PROFILES AT THE JUNGFRAUJOCH STATION

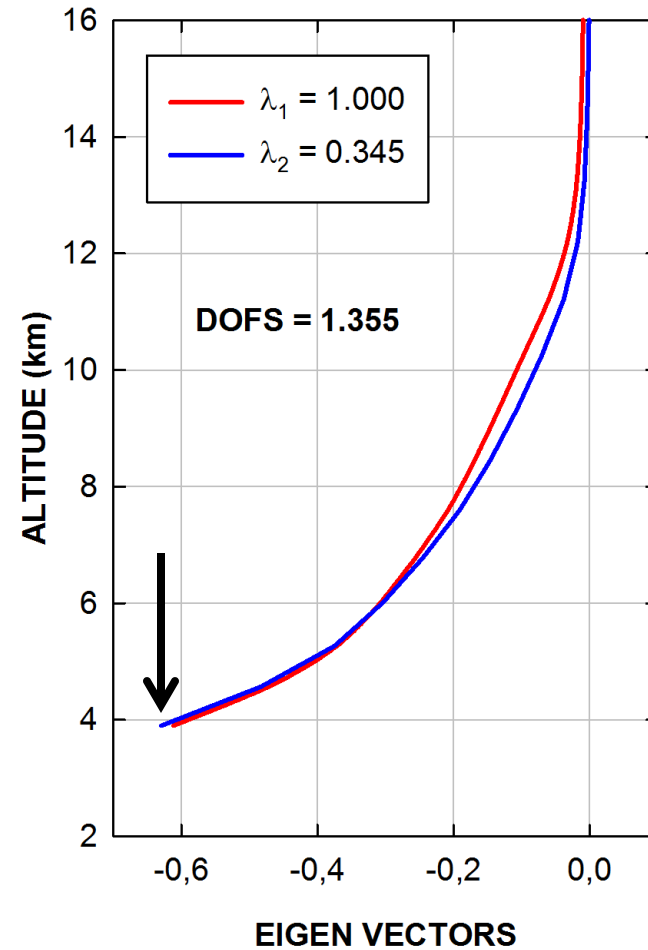

3. PRELIMINARY RESULTS

EXAMPLE OF H₂CO EIGEN VECTORS AT JUNGFRAUJOCH

March 23rd 2010 spectra
SZA = 77°

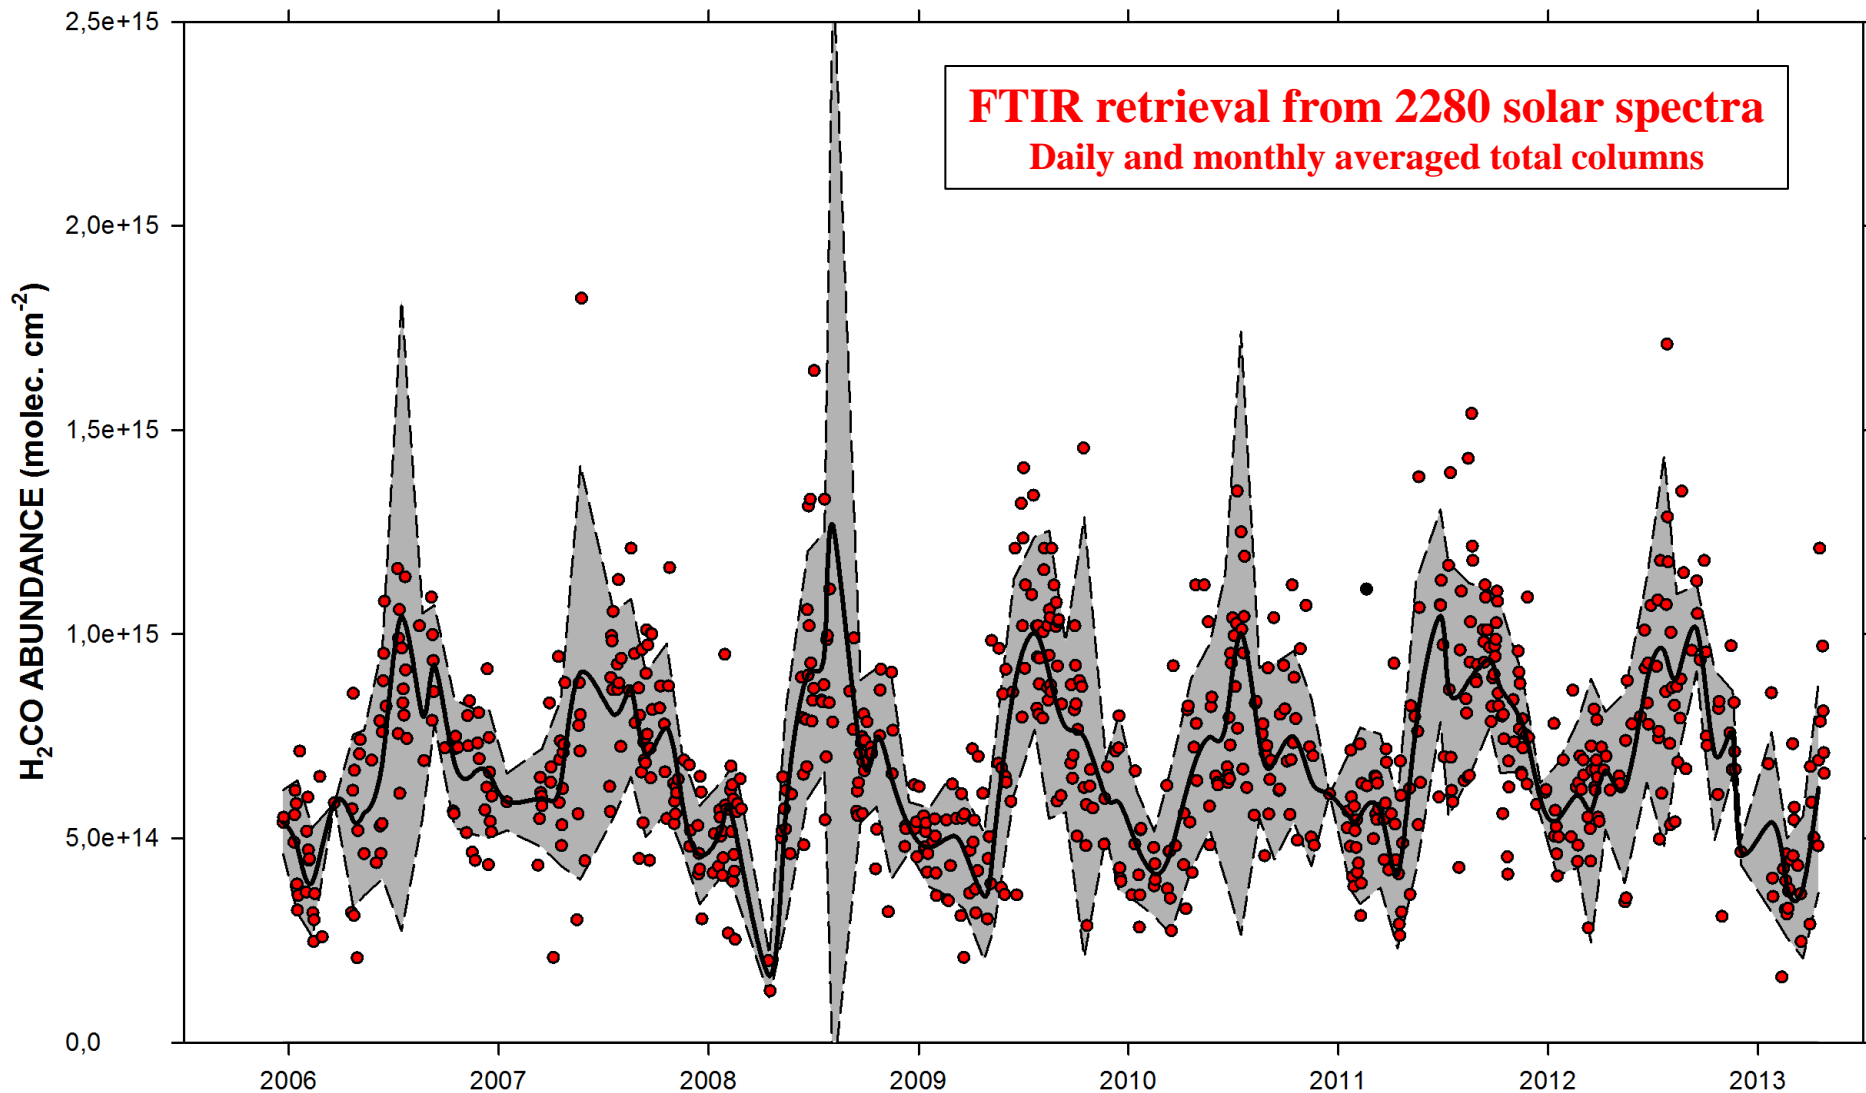

July 7th 2010 spectra
SZA = 71°

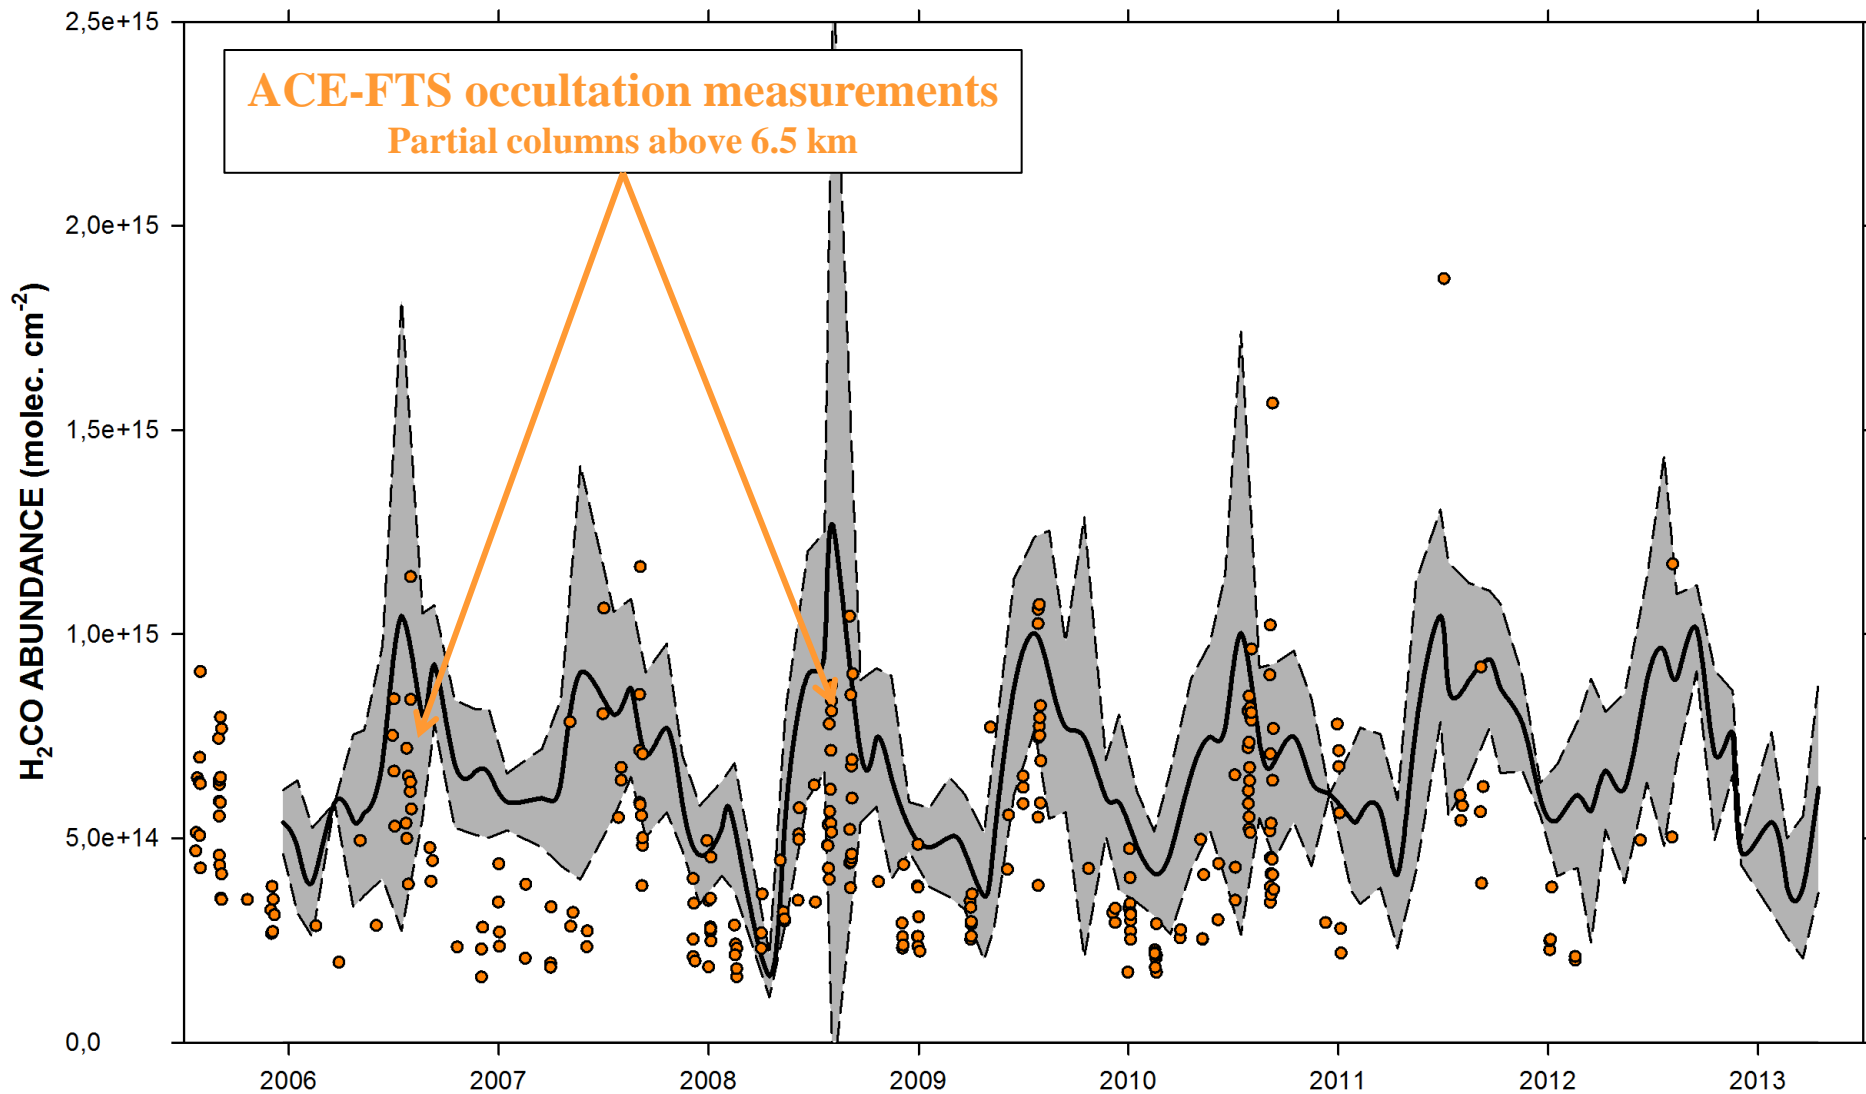

3. PRELIMINARY RESULTS

TIME SERIES OF H₂CO COLUMN ABOVE JUNGFRAUJOCH

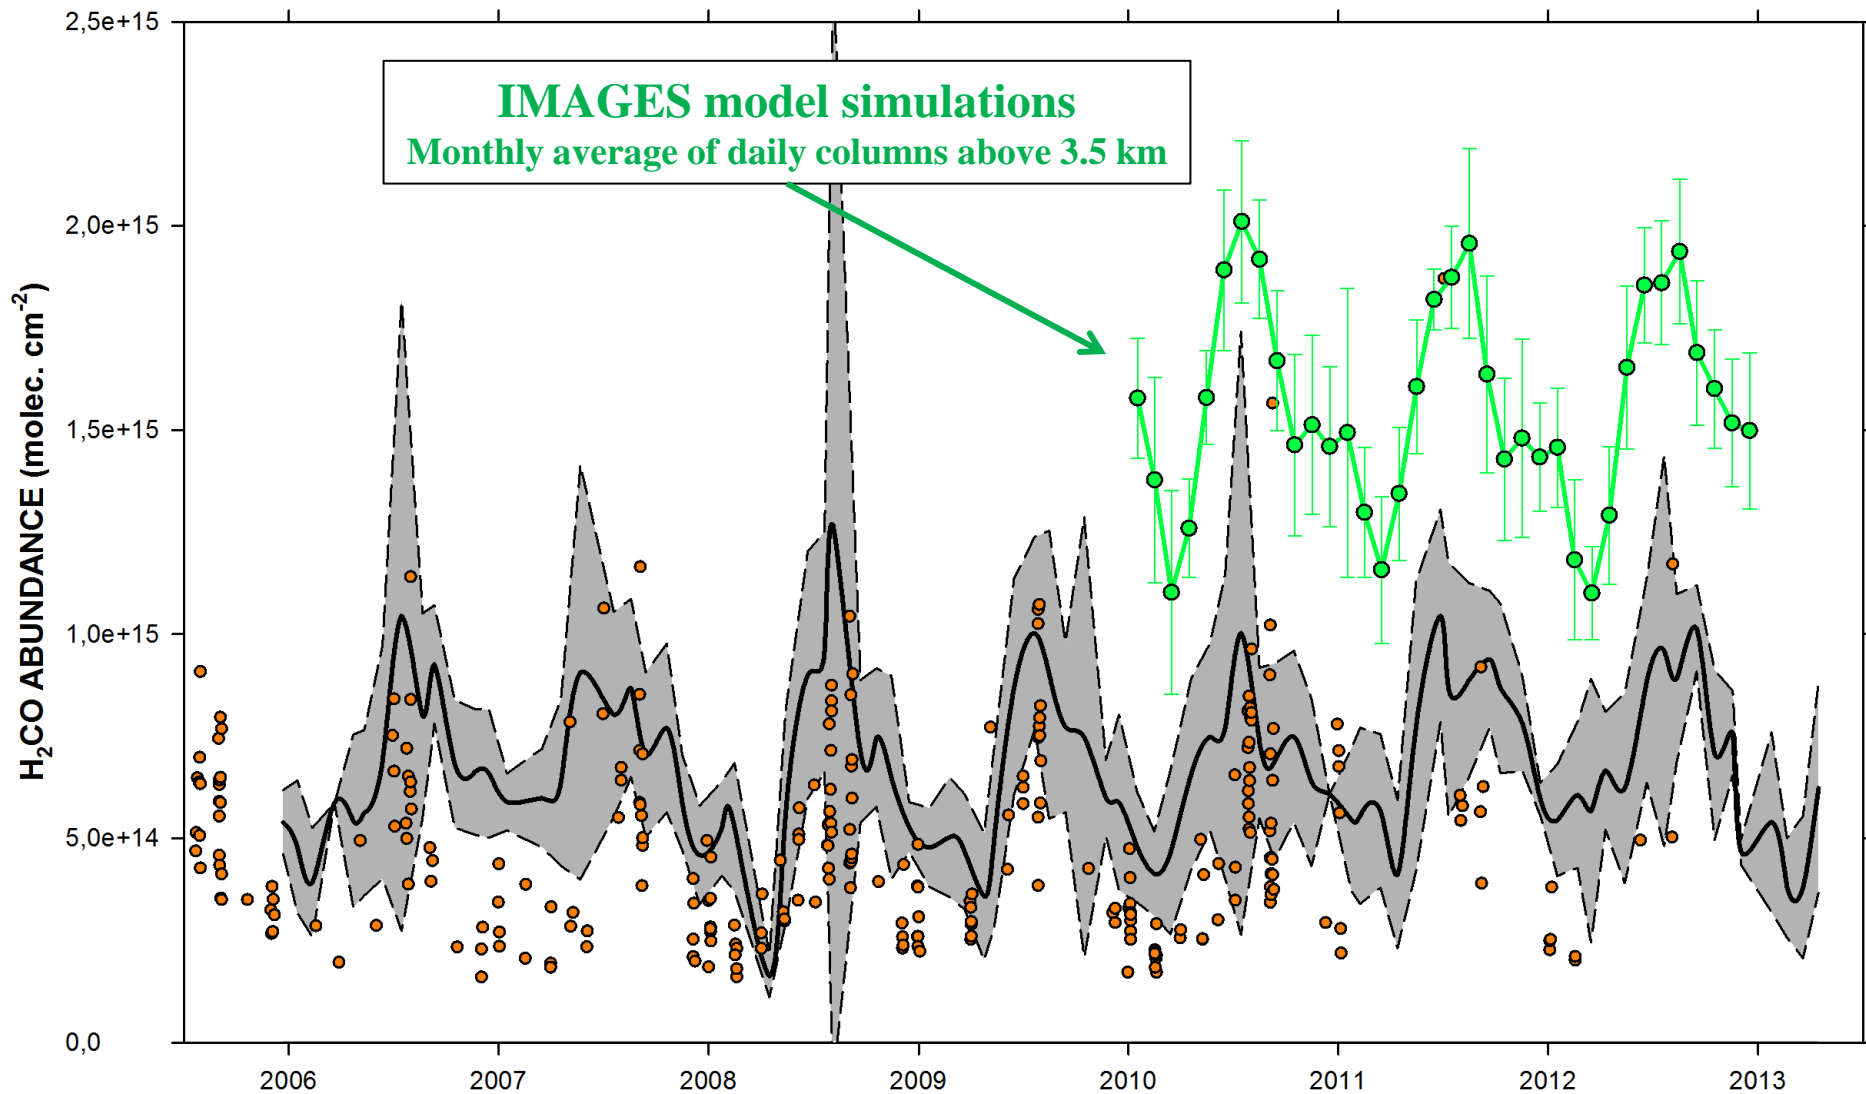

3. PRELIMINARY RESULTS

TIME SERIES OF H₂CO COLUMN ABOVE JUNGFRAUJOCH

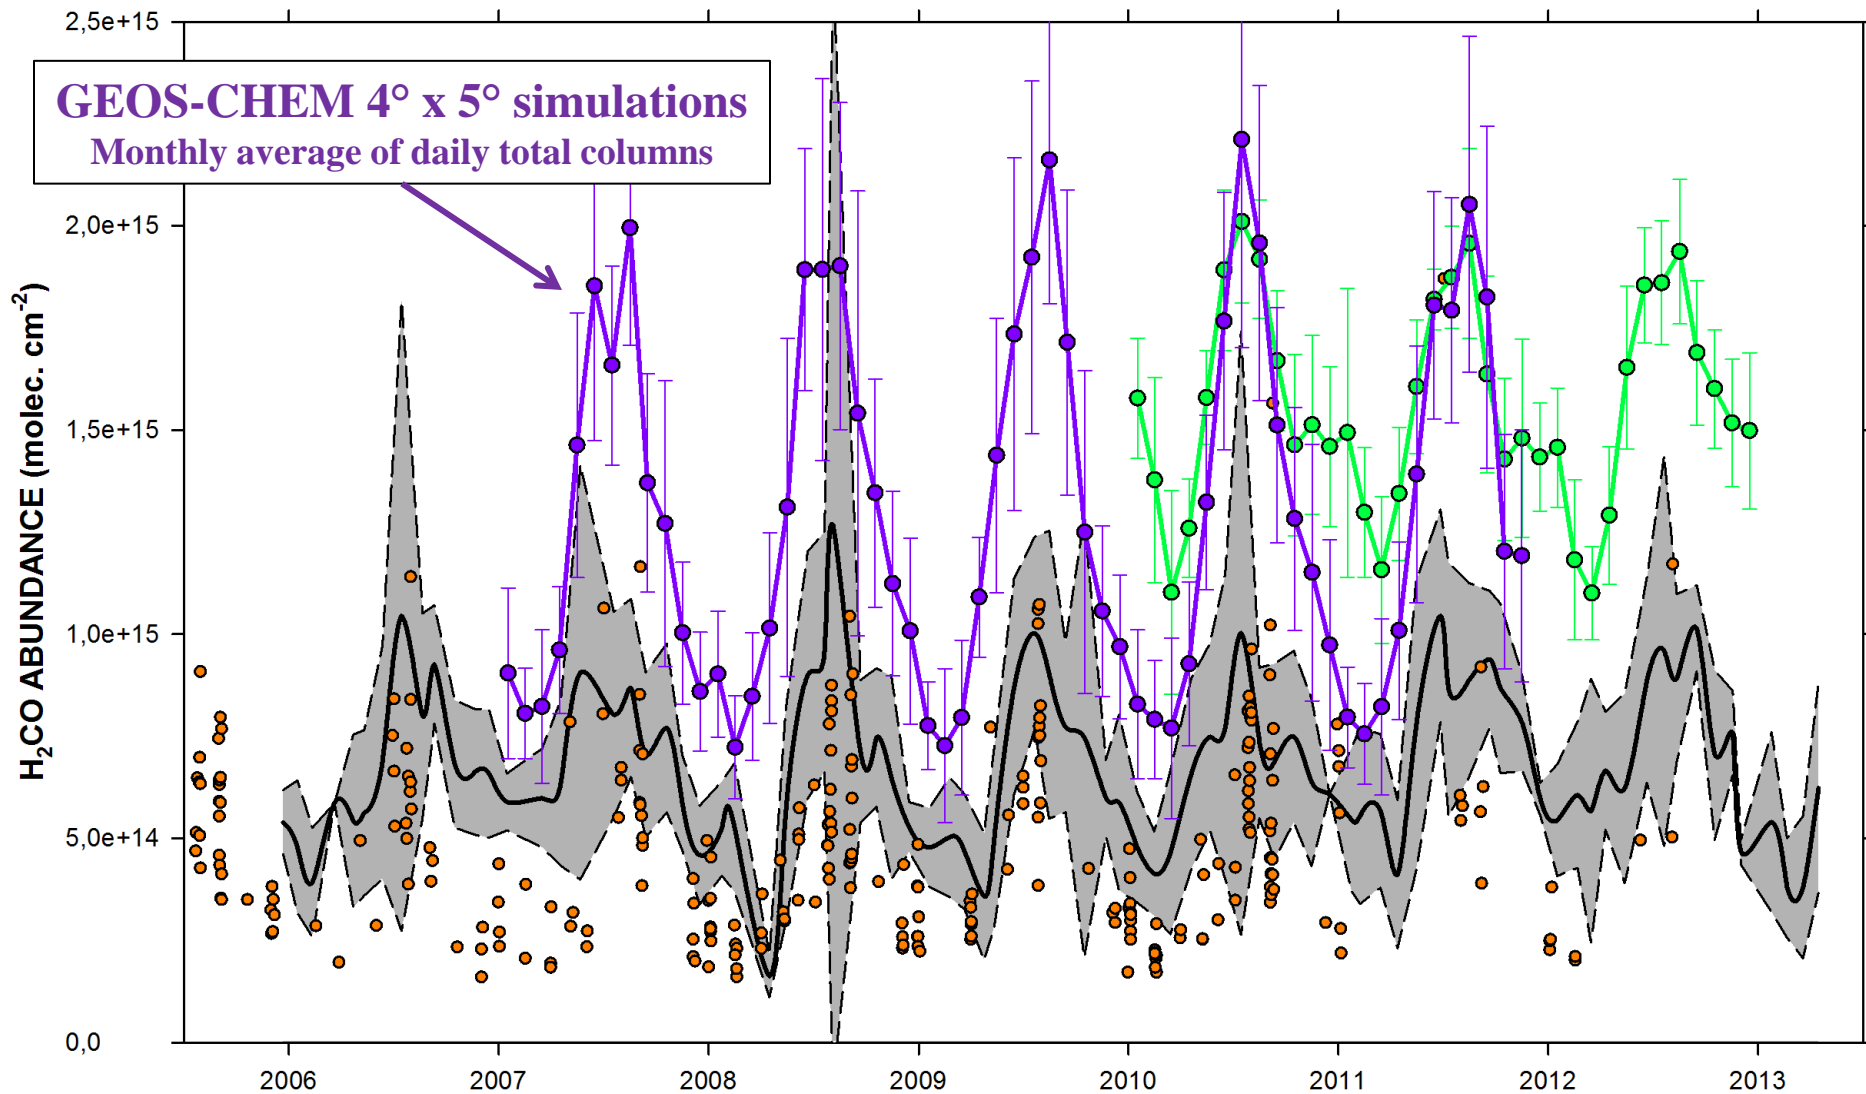

3. PRELIMINARY RESULTS

TIME SERIES OF H₂CO COLUMN ABOVE JUNGFRAUJOCH

3. PRELIMINARY RESULTS

TIME SERIES OF H₂CO COLUMN ABOVE JUNGFRAUJOCH

3. PRELIMINARY RESULTS

SEASONAL CYCLE OF H₂CO ABOVE JUNGFRAUJOCH

3. PRELIMINARY RESULTS

SEASONAL CYCLE OF H₂CO ABOVE JUNGFRAUJOCH

3. PRELIMINARY RESULTS

SEASONAL CYCLE OF H₂CO ABOVE JUNGFRAUJOCH

3. PRELIMINARY RESULTS

SEASONAL CYCLE OF H₂CO ABOVE JUNGFRAUJOCH

3. PRELIMINARY RESULTS

→ FTIR total columns appear to be low during summertime...

Forthcoming research and developments

Retrieval strategy with the 2833.070 – 2833.350 cm^{-1} microwindow

- Spectroscopic parameters → contribution to the error budget ?
→ HITRAN 2012 with updated H_2CO line parameters
- Two consecutive runs → first run for the interfering species
→ second run to fit H_2CO only
- Optimal Estimation Method instead of Tikhonov regularization ?

Retrieval strategy with 6 microwindows from Vigouroux et al., 2009 ?

... but using broad-band spectra !

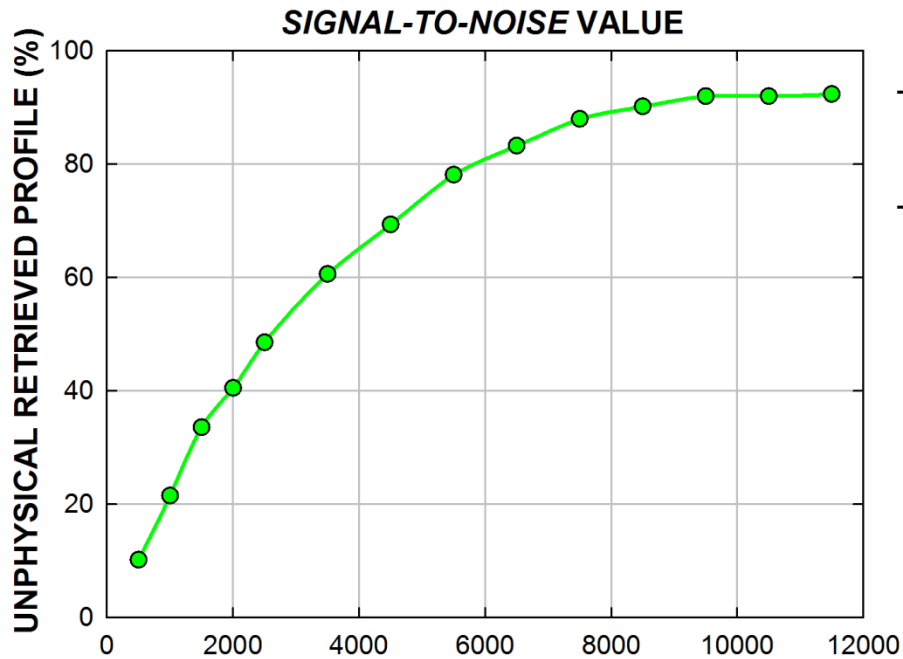

Thanks for your attention

Special thanks to *Michel Van Roozendael, François Hendrick, Jenny Stavrakou, Isabelle De Smedt* and *Gaia Pinardi* for the IMAGES and MAX-DOAS data

4. CONCLUSION AND DISCUSSION

Investigating an Optimal Estimation Method for the H₂CO retrieval strategy

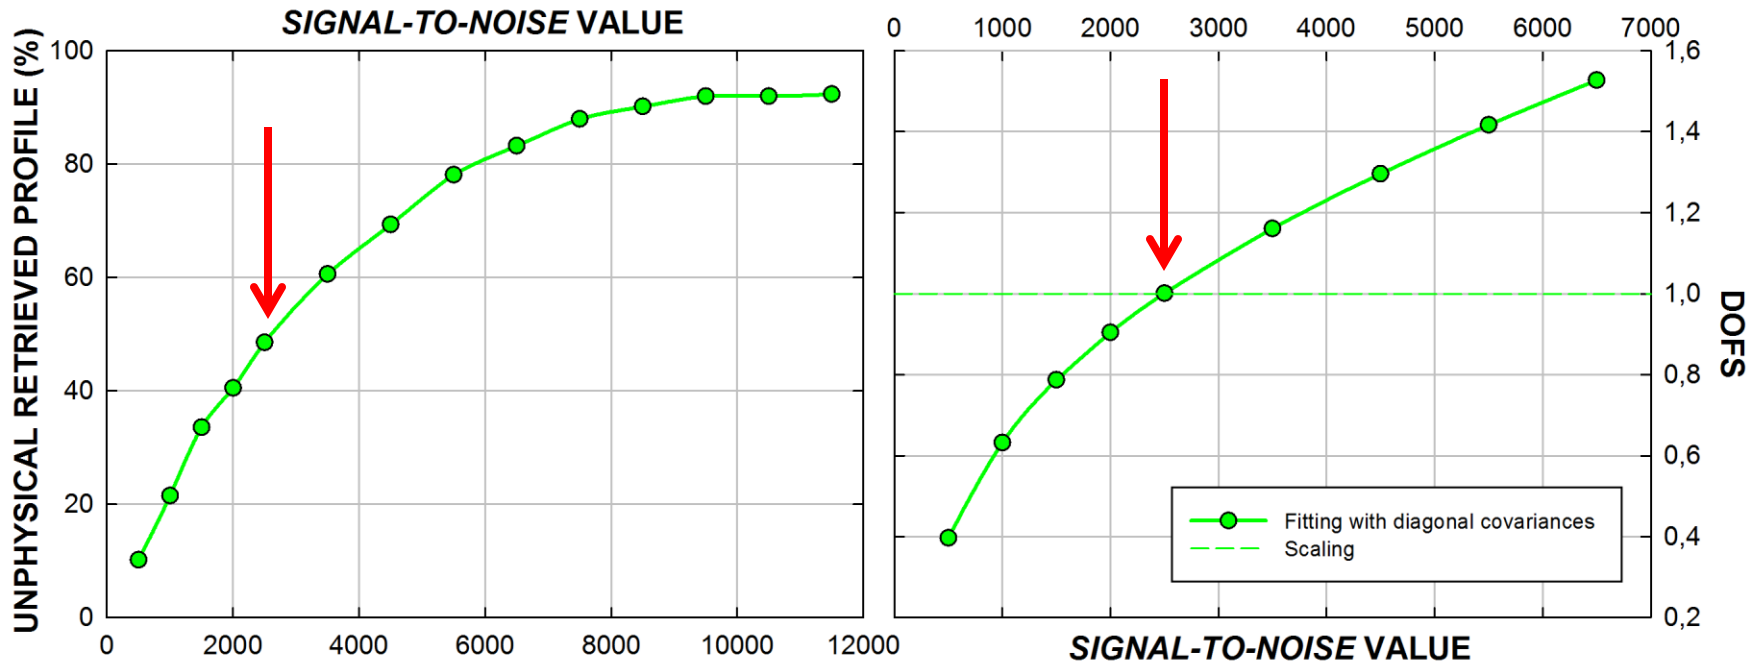

- Making use of climatological conditions
- Applying diagonal covariances deduced from ACE-FTS (v3) occultation measurements

➡ Further experiments to fix the inter-layer correlation are still required

4. CONCLUSION AND DISCUSSION

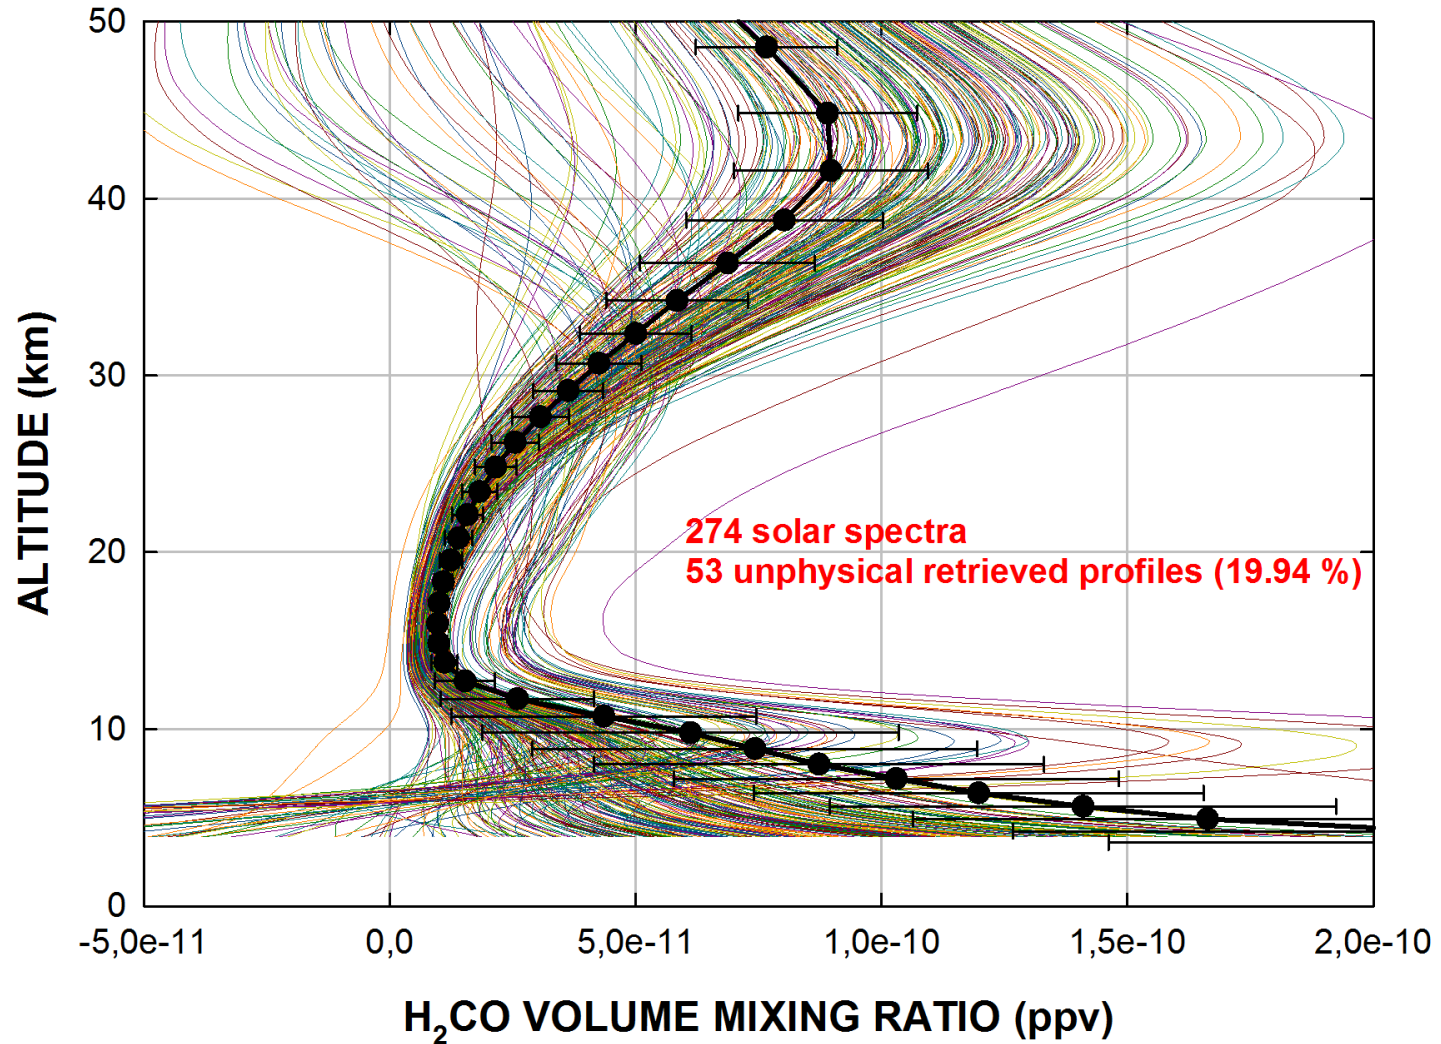

Optimal Estimation Method for the H_2CO retrieval

3. PRELIMINARY RESULTS

H₂CO RETRIEVED PROFILES ABOVE JUNGFRAUJOCH FOR 2010

Tikhonov regularization - $\alpha = 25$

3. PRELIMINARY RESULTS

H₂CO RETRIEVED PROFILES ABOVE JUNGFRAUJOCH FOR 2010

Tikhonov regularization - $\alpha = 250$
