LA LIBERTÉ DE CHERCHER

NO PERFORMANCE REDUCTION AT THE PRESENT NORTHERN EDGE OF *AMBROSIA ARTEMISIIFOLIA* L. INVASION RANGE

WILLIAM ORTMANS, BRUNO CHAUVEL, GRÉGORY MAHY, ARNAUD MONTY

4TH INTERNATIONAL SYMPOSIUM ON WEEDS AND INVASIVE PLANTS
MAY 18-23 2014 MONTPELLIER, FRANCE

- ***A. artemisiifolia* distribution in Western Europe**

Global Biodiversity Information
Database (GBIF)

European Aeroallergen
Network and European Pollen
Information

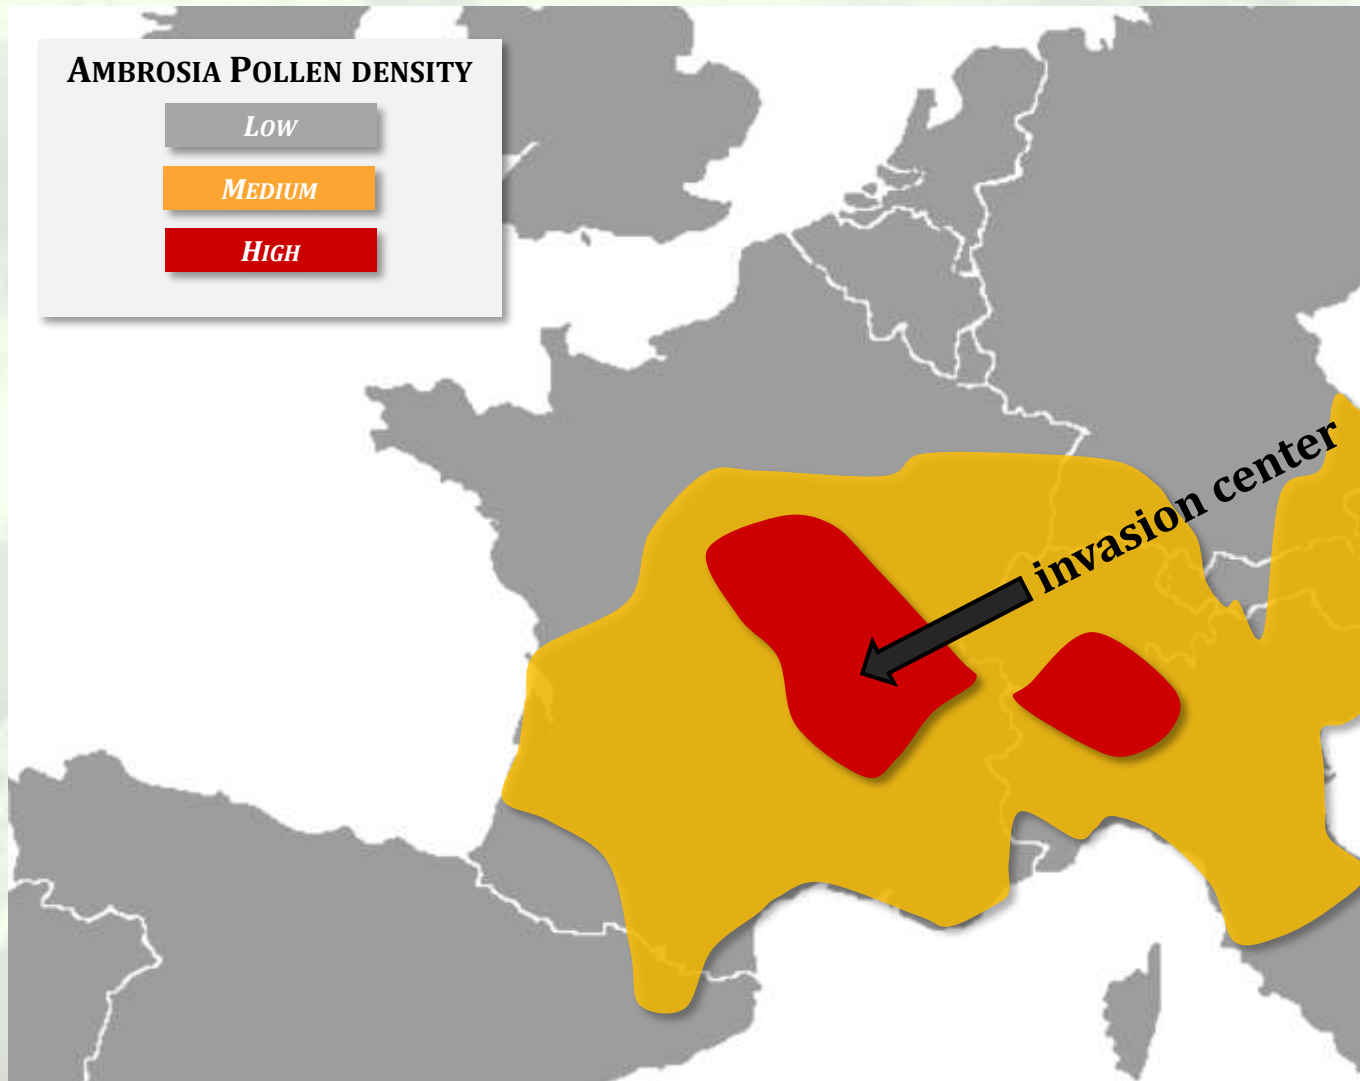

Delivering Alien Invasive Species
Inventories for Europe (DAISIE)

- **Schema of the distribution in Western Europe**

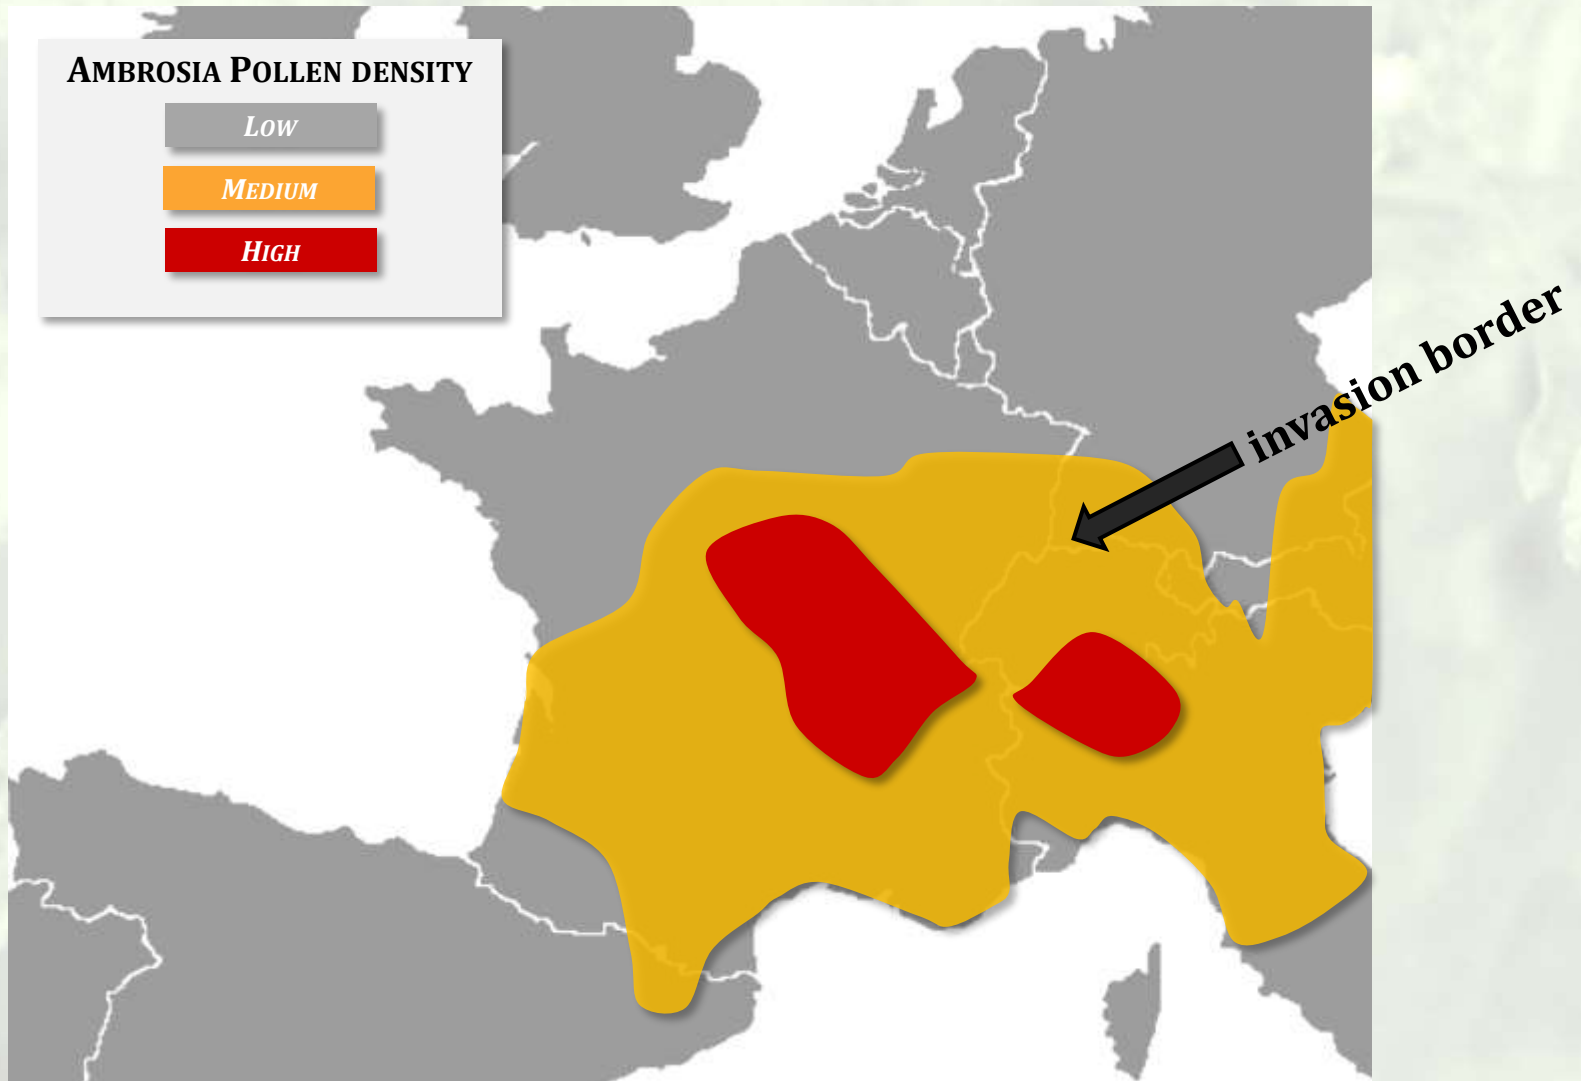

Based on *European Aeroallergen Network* database European Pollen Information (2012)

 - Two measurement campaigns
 - Summer field Campaign

- **Sampling Design**

- Two measurement campaigns
 - Summer field Campaign
 - Autumn field Campaign

- **Sampling Design**

- Summer Field Campaign

20 plants x 3 populations x 4 zones of invasion

- **Sampling Design**

- Summer Field Campaign

20 plants x 3 populations x 4 zones of invasion

✓ Above ground biomass → Growth performance

- **Sampling Design**

- Summer Field Campaign

20 plants x 3 populations x 4 zones of invasion

✓ *Above ground biomass*

- **Sampling Design**

- Summer Field Campaign

20 plants x 3 populations x 4 zones of invasion

- ✓ Above ground biomass

- ✓ Specific Leaf Area

➔ Response to environmental stress

- **Sampling Design**

- Summer Field Campaign

20 plants x 3 populations x 4 zones of invasion

✓ Above ground biomass

✓ Specific Leaf Area

- **Sampling Design**

- Summer Field Campaign

20 plants x 3 populations x 4 zones of invasion

- ✓ Above ground biomass
 - ✓ Specific Leaf Area
 - ✓ Competition

- **Sampling Design**

- Summer Field Campaign

20 plants x 3 populations x 4 zones of invasion

- ✓ Above ground biomass

- ✓ Specific Leaf Area

- ✓ Competition

Biovolume of native flora = (native flora cover) x (mean height)

- **Sampling Design**

- Autumn Field Campaign

25 plants x 3 populations x 4 zones of invasion

- **Sampling Design**

- Autumn Field Campaign

25 plants x 3 populations x 4 zones of invasion

✓ Seed production → Reproductive performance

- **Sampling Design**

- Autumn Field Campaign

25 plants x 3 populations x 4 zones of invasion

✓ Seed production

- **Sampling Design**

- Autumn Field Campaign

25 plants x 3 populations x 4 zones of invasion

- ✓ Seed production

- ✓ % non-pollinated seeds

➔ Pollen limitation?

- **Sampling Design**

- Autumn Field Campaign

25 plants x 3 populations x 4 zones of invasion

- ✓ Seed production

- ✓ % non-pollinated seeds

- Subset of 30 seeds by plants

- **Statistical analysis**

- Generalized linear model for each field campaign

Model:

Factors	Type	Levels
Zone	Fixed	4
Population (Zone)	Random	12

→ Competition as covariate (Summer data)

Results

- Above ground biomass**

Source of variation	Biomass		
	df	F	p
Competition	1	0,36	0,550
Invasion Zone	3	0,77	0,541
Population (Invasion Zone)	8	5,41	<0,001
Error	221	-	-

- Above ground biomass**

1) Stable invasion area

Performances

2) Invasion area expansion

Performances

Conclusion

- **No performance variation**
 - Isolated populations have the same performance than others
 - No limitation by environmental conditions
 - Invasion potential in the North

- **Small scale survey in 2007**
 - Only three populations were found in Belgium...

- **Small scale survey in 2007**
 - Only three populations were found in Belgium...
 - Inefficient detection ?

- **Small scale survey in 2007**

- Only three populations were found in Belgium...

- Inefficient detection ?

And/or

- Other limiting factors ?

- **Early detection is the key !**
 - The species has to be monitored

- **Early detection is the key !**
 - The species has to be monitored
 - Agricultural habitat cannot be neglected !

- **Early detection is the key !**
 - The species has to be monitored
 - Agricultural habitat cannot be neglected !
 - Risk linked to new cultivated species
