Polysemy in Language Contact

Borrowing of the Greek-origin adposition κατά in Coptic
The aim of this talk is to examine an aspect of the semantics of adposition borrowing, focusing on the extent to which polysemy networks associated with source-language adpositions are borrowed.
Goal

- The aim of this talk is to examine an aspect of the semantics of adposition borrowing, focusing on the extent to which polysemy networks associated with source-language adpositions are borrowed.
Status quaestionis

- Polysemy networks and language contact phenomena
  - Polysemy networks have been dealt with intensively in analyses of **PAT transfers**

  ![Diagram](image)

  - **MAT(ter) transfer** (or *borrowing*): when morphological material and its phonological shape from one language is replicated in another language
  - **PAT(tern) transfer**, *calque* or *replication*: when only the pattern of the other language is replicated, i.e. the organization, distribution and mapping of grammatical and semantic meaning, while the form itself is not borrowed

  - MAT vs. MAT or FABRIC, see Grants (2012)
Polysemy networks and language contact phenomena

Polysemy networks have been dealt with intensively in analyses of PAT transfers.

It became an especially hot topic recently, as a follow-up to the ‘language-internal’ grammaticalization studies, i.e. C(ontact) I(nduced) G(rammaticalization).

The kinds of PAT-transfer that involves polysemy received various labels over the time:

- Weinreich’s (1953) identification;
- Breu’s (2003) borrowed meanings;
- Heine & Kuteva’s (2005) polysemy copying;
- Matras & Sakel’s (2007a) pivot-matching;
- Gast & van der Auwera’s (2012) semantic map assimilation.

These labels refer to different ways of describing, understanding and explaining contact-induced language changes that involve polysemy, or more precisely, new patterns of polysemy/polyfunctionality that occur under the impact of language contact.

For CIG, see Heine & Kuteva (e.g. 2003; 2005; 2012).
Status quaestionis

- Polysemy networks and language contact phenomena
  - Polysemy networks have been dealt with intensively in analyses of PAT transfers
  - Weinreich’s (1953) identification; Breu’s (2003) borrowed meanings; Heine & Kuteva’s (2005) polysemy copying; Matras & Sakel’s (2007a) and Matras’ (2009) pivot-matching; Gast & van der Auwera’s (2012) semantic map assimilation

Here, the semantic map assimilation model which stresses the importance of language internal development in CIG processes.

Semantic map assimilation in Gast & van der Auwera (2012) s.polis@ulg.ac.be
Status quaestionis

Polysemy networks and language contact phenomena
- Polysemy networks have been dealt with intensively in analyses of PAT transfers
- Weinreich’s (1953) identification; Breu’s (2003) borrowed meanings; Heine & Kuteva’s (2005) polysemy copying; Matras & Sakel’s (2007a) and Matras’ (2009) pivot-matching; Gast & van der Auwera’s (2012) semantic map assimilation
- The basic principle can be phrased as follows:

  Given one form \( x \) in \( M \) and one form \( y \) in \( R \), which share at least one similar function/meaning so that they can be matched, the number of functions of \( y \) in \( R \) is extended, based on the polysemy network of \( x \).

Hebrew (age 4-6) - R
\[ ze \ avál \ yafé! \]
This but nice “This is very nice indeed!”

German - M
\[ Das \ ist \ aber \ schön! \]
This is but nice “This is very nice indeed!”

Matras (2009: 26)
Status quaestionis

- Polysemy networks and language contact phenomena
  - Polysemy networks have been dealt with intensively in analyses of **PAT transfers**
  - Much less interest for this topic in the framework of **MAT transfers**
    - The borrowing of signs, i.e. of form-meaning pairings, has been neglected to some extent for the grammatical items
    - Heine & Kuteva (2003, 2005, 2012, etc.) refrained explicitly from examining MAT transfers, i.e. borrowed items, in their study of grammatical change

---

Wiener & Wälchli (2012)
Status quaestionis

- Polysemy networks and language contact phenomena
  - Polysemy networks have been dealt with intensively in analyses of **PAT transfers**
  - Much less interest for this topic in the framework of **MAT transfers**

However, Wiemer & Wälchli (2012) showed with several examples that MAT and PAT transfers occur very often together in grammatical borrowing (see e.g. Hansen & Birzer 2012 about the yiddish modals, with MAT = Germanic, while PAT = Slavic)

They stress that

> “A major question is how much pattern structure a borrowed items can possibly drag along.”
Status quaestionis

- Polysemy networks and language contact phenomena
  - Polysemy networks have been dealt with intensively in analyses of **PAT transfers**
  - Much less interest for this topic in the framework of **MAT transfers**

However, Wiemer & Wälchli (2012) showed with several examples that MAT and PAT transfers occur very often together in grammatical borrowing (see e.g. Hansen & Birzer 2012 about the yiddish modals, with MAT = Germanic, while PAT = Slavic)

This leads to distinguishing two dimensions among the **borrowability** issues:

1. **Traditional**: what kind of MAT can be borrowed? (*adaptability or borrowability scales, likelihood of transfer*), focusing on MAT categories and semantic/pragmatic properties of these categories

2. **Neglected**: as carrier of what kind of PAT?
Status quaestionis

- Polysemy networks and language contact phenomena
  - Polysemy networks have been dealt with intensively in analyses of PAT transfers
  - Much less interest for this topic in the framework of MAT transfers

However, Wiemer & Wälchli (2012) showed with several examples that MAT and PAT transfers occur very often together in grammatical borrowing (see e.g. Hansen & Birzer 2012 about the yiddish modals, with MAT = Germanic, while PAT = Slavic)

This leads to distinguishing two dimensions among the borrowability issues:

1. **Traditional**: what kind of MAT can be borrowed? (*adaptability or borrowability scales, likelihood of transfer*), focusing on MAT categories and semantic/pragmatic properties of these categories
2. ‘**Neglected**’: as carrier of what kind of PAT?

Traditional approaches to borrowability already paid attention to functional aspects of borrowing, e.g. Aikhenvald (2007: 26-35) who lists (at the 16th and last position in her list of favouring factors) ‘**Unifunctionality and semantic transparancy**’ => avoidance of polysemic items
Status quaestionis

- Polysemy networks and language contact phenomena
  - Polysemy networks have been dealt with intensively in analyses of **PAT transfers**
  - Much less interest for this topic in the framework of **MAT transfers**

However, Wiemer & Wälchli (2012) showed with several examples that MAT and PAT transfers occur very often together in grammatical borrowing (see e.g. Hansen & Birzer 2012 about the yiddish modals, with MAT = Germanic, while PAT = Slavic)

As carrier of what kind of PAT?

1. **Global copying**: entire sign (signifier/signified) is borrowed
2. **Selective copying**: only certain aspects of a unit from the model core are transferred

The second option is supported by remarks in Kukanda (1983: 10, monosemic borrowing of polysemic lexemes in Lingala); Mann (1993); Stolz & Stolz (1996: 108, borrowed elements are often used in a subdomain of their original use); Breu (2003: 361-363, reconfiguration of the signified in R, but “no statement can be made about the percentage of semantic adaptations and the complications that arise in the process”)

Wiemer & Wälchli (2012)
Status quaestio

- Polysemy networks and language contact phenomena
  - Polysemy networks have been dealt with intensively in analyses of PAT transfers
  - Much less interest for this topic in the framework of MAT transfers

However, Wiemer & Wälchli (2012) showed with several examples that MAT and PAT transfers occur very often together in grammatical borrowing (see e.g. Hansen & Birzer 2012 about the yiddish modals, with MAT = Germanic, while PAT = Slavic)

As carrier of what kind of PAT?

1. **Global copying**: entire sign (signifier/signified) is borrowed
2. **Selective copying**: only certain aspects of a unit from the model core are transferred

Regarding adpositions, Matras (2007) notes that, in the spatial domain “‘Core’ relations (‘in’, ‘at’, ‘on’) are borrowed less frequently than “peripheral” relations (‘between’, ‘around’, ‘opposite’), and this finds some support in the appearance of ‘between’ as the most frequent borrowing in the sample.” But nothing is said regarding other semantic domains or about polysemic items
What is needed?

- Corpus based case-studies of the transfer of polysemic items
- The borrowing of Greek prepositions in Coptic will do
  - Adpositions are highly polysemous items
  - For a start, we have at our disposal the most famous parallel corpus, namely the Bible (on the Bible text as parallel corpus for language comparison, see Cysouw & Wälchli 2007; Granger 2010; Mayer & Cysouw, here).
- One *caveat*: the corpus investigated is limited to the New Testament (5000 lemmata; 140,000 words). As such:
  - The observations apply only to this corpus and not to ‘Greek’ or ‘Coptic’ in general.
  - Generalizations that are proposed here are purely tentative and should be elaborated further based on other case-studies. See Matras & Sakel (2007: 3) on some generalizations about borrowing that have been proposed with reference to a case study of just one single contact situation (e.g. Haugen 1950, van Hout and Muysken 1994, Ross 2001, Field 2002)
Outline of the case-study

- Background
  - The language contact situation: Greek and Coptic
  - The Greek-origin prepositions in Coptic
- The polysemy network of κατά in Greek
- The polysemy network of κατά in Coptic
  - Sahidic
  - Bohairic
- Morphosyntactic integration of κατά in Coptic
- Conclusions
Contact situation: The Coptic language

- Coptic
  - Latest stage of the Ancient Egyptian language (2^{nd}-14^{th} A.D.)
Contact situation: The Coptic language

- **Coptic**
  - Latest stage of the Ancient Egyptian language (2nd-14th A.D.)
  - Script: Greek alphabet + 6/7 graphemes (> Demotic > Hieroglyphs)
Contact situation: The Coptic language

  - Latest stage of the Ancient Egyptian language (2\textsuperscript{nd}-14\textsuperscript{th} A.D.)
  - Script: Greek alphabet + 6/7 graphemes (> Demotic > Hieroglyphs)
  - Significant dialectal variation
    - A(khmimic)
    - B(ohairic)
    - F(aiyumic)
    - L(ycopolitan)
    - M(esokemic) or M(iddle Egyptian)
    - S(ahidic)

De Vogelaer & Seiler (2012) on the importance of dialects
Contact situation: Greek and Coptic

- **Coptic**
  - Latest stage of the Ancient Egyptian language (2nd-14th A.D.)
  - Script: Greek alphabet + 6/7 graphemes (> Demotic > Hieroglyphs)
  - Significant dialectal variation

- **Greek and Coptic**
  - When the first texts written in Coptic emerge in our documentation, Egypt is a multilingual society for centuries, which implies that, by that time, the Egyptian language had long been subject to contact-induced language change.
  - Greek holds an exceptional position by the beginning of the 3rd century B.C.: *lingua franca* (as everywhere else in the Middle East since the campaigns of Alexander the Great) and associated with high social prestige due to its usage by the elite.

DeVogelaer & Seiler (2012) on the importance of dialects

s.polis@ulg.ac.be
Contact situation: Greek and Coptic

- Coptic

  - Script: Greek alphabet + 6/7 graphemes (> Demotic > Hieroglyphs)
  - Significant dialectal variation

- Greek and Coptic

- Coptic of the New Testament
  - The texts of the corpus on which the case-study relies, however, do not only testify of this long contact situation: it is a corpus of translated texts. As Shisha-Halevy (1990: 100, n. 4) puts it, the kind of language contact between Greek and Coptic “is (...) a distinct type of bilinguality: not a matter of double linguistic competence, but the contact of two texts. One text is an authoritative source, given, ever-present, decoded (but also interpreted and often imitated) by the author of the target text; the other text is created on the basis of the source text. This is a situation of ‘text in contact’ (encoded with decoded) as well as ‘languages in contact.’”

Shisha-Halevy (1990: 100, n. 4)

</tbody>
</table>

- Harmonic linear order
- Unlike Greek prepositions, Greek-origin prepositions in Coptic have:
  - No case endings on the complement (!semantics!)
  - No relationship with compound verbs or free adverbial element (as do the “proper” Greek prepositions)

κατα (kata) > προς (pros), παρα (para) > ως (hos), χωρικ (k'ôris) > ΑΝΤΙ (anti)
The polysemy network of κατά in Greek

- Attested since Homerus down to today
- Regarding its semantics, there seem to be an agreement among the scholars that this preposition implies a(n originally downwards) trajectory
- It governs two cases
  - Genitive. Spatial meaning: down (from or upon into)
  - Accusative. Spatial meaning: throughout, along(side)

Luraghi 2003: 197-213; Bortone 2010

Classical Greek

The polysemy network of κατά in Greek

- In NT koinê Greek, κατά underwent considerable changes
  - It is already the case during the Ptolemaic Period, see e.g. Mayser (1934: 337): “[d]er erste Blick in eine ptolemäische Urkunde […] läßt erkennen, daß der Gebrauch der Präpositionen im Vergleich zur klassischen Zeit wesentlich zugenommen hat”
  - For the main tendencies of the evolution in the NT Greek, see inter alii Deissmann (1901: 138-140); Moulton (1908: I, 98-105); Regard (1919: 466-490); Robertson (1934: 607-609); Moule (1959: 58-sq); Blaß – Debrunner – Funk (1961: § 224-225 ; § 248,1); Balz – Schneider (1990); Porter (1994: 162-164); Arndt – Gingrich (2000: s.v.)
  - Regard (1919): “[l]es sens usuels de l’époque classique sont représentés par un petit nombre d’exemples avec le génitif, par un grand nombre avec l’accusatif.”
The polysemy network of κατά in Greek

- In NT koine Greek, κατά underwent considerable changes.
- Regard (1919): “[l]es sens usuels de l’époque classique sont représentés par un petit nombre d’exemples avec le génitif, par un grand nombre avec l’accusatif.”

κατά in the NT

- 16% Gen.
- 84% Acc.

- Regard (1919): “[l]es sens usuels de l’époque classique sont représentés par un petit nombre d’exemples avec le génitif, par un grand nombre avec l’accusatif.”

κατά + genitive (74 occurrences in the NT)
- The spatial meanings “down from” (1 occ.) and “down over, into” (9 occ.) are residual. For the Ptolemaic Greek, see Mayser (1934: 428): “[d]ie locale Bedeutung (von – herab) ist völlig erloschen. Dagegen ist der reine Genitiv mit der Richtung nach unter [...] in zwei Beispielen vertreten”).
- The “against” hostile meaning is the best attested one (56 occ.; 75% of the examples); see e.g. Modern Greek κατά της κυβερνήσεως “against the government”
The polysemy network of κατά in Greek

- κατά + genitive (74 occurrences in the NT)
- κατά + accusative (396 occurrences in the NT)
  - The conformity meaning (with its variants “in accordance with, according to, similarly to”) is attested 240 times and represents more than 50% of all the occurrences of κατά in the NT; [CONCEPTUAL SPHERE]
  - The distributive meaning is also well attested (57 occ.) [CONCEPTUAL SPHERE]
  - Extension of the meaning of the preposition to the spatial Allative meaning “to”, which was not attested in Classical Greek (only the semantics associated with the trajectory remains). It could explain the fact that, at the same time, the preposition enters valency-patterns (e.g. Acta 27.12: […] λιμένα τῆς Κρήτης βλέποντα κατὰ λίβα καὶ κατὰ χώρον “a harbour of Crete facing both southwest and northwest).

The polysemy network of κατά in Greek

On the kinds of Greek in the NT books, see Horrocks (2010: 149)

s.polis@ulg.ac.be
The polysemy network of κατά in Coptic

- In the grammatical descriptions of Coptic
  - “according to, like” (see e.g. Shisha-Halevy 1986: 58; Layton 2004: §200-202)
  - “by” [distributive]; this preposition “can also have a distributional interpretation” (Reintges 2004: 110)

- It would mean that, among all the functions attested for the preposition in Post-Classical Greek, Coptic only borrowed the two best attested meaning of κατά + ACC.
  - Frequency matters: respectively 51% and 12%
  - Both belong to the “conceptual domain” (expected on the scale of borrowability)
The polysemy network of κατά in Coptic

- In the grammatical descriptions of Coptic
- It would mean that, among all the functions attested for the preposition in Post-Classical Greek, Coptic only borrowed the two best attested meaning of κατά + ACC.

What do we see in the Coptic translations of the NT?

- The meanings expressed by κατά + genitive are never PAT-transferred
- Frequency is not the only argument, since the meaning expressed by κατά + genitive are never borrowed (even the “hostile” meaning which occur as frequently as the distributive meaning which is borrowed)
  - Shisha-Halevy (1986: 58 n. 146): “I have found no instance of kata in the sense ‘against’ or ‘as for’”, see also Gordon (1965), BIFAO 63, p. 135-137. In the documentary corpus, see however in CPR IV, 1,7 [VIIth-VIIIth], cf. Förster 2002: 384)
  - The fact that κατά + GÉΝ. was not borrowed has not been a constraint forbidding the borrowing of Greek verbs and nouns such as καταφρονεῖ “to disdain”, καταλαλεῖ “to slander”, etc. It is therefore worth noticing that a phenomenon such as the one taking place with the Greek prefix προ- (cf. Funk 1979) did not occur with κατά
The polysemy network of κατά in Coptic

- In the grammatical descriptions of Coptic
- It would mean that, among all the functions attested for the preposition in Post-Classical Greek, Coptic only borrowed the **two best attested meaning of κατά + ACC**.
- What do we see in the Coptic translations of the NT?
  - The meanings expressed by κατά + genitive are never PAT-transferred
  - Several meanings expressed by κατά + accusative are PAT-transferred
The polysemy network of κατά in Coptic

- In the grammatical descriptions of Coptic
- It would mean that, among all the functions attested for the preposition in Post-Classical Greek, Coptic only borrowed the **two best attested meaning of κατά + ACC.**
- What do we see in the Coptic translations of the NT?
  - The meanings expressed by κατά + genitive are never PAT-transferred
  - Several meanings expressed by κατά + accusative are PAT-transferred

Conformity (according to, corresponding with)

\[ \text{ἀποδώσει αὐτῷ ὁ κύριος κατά τὰ ἔργα αὐτοῦ (Tim2 4.14)} \]
\[ \text{εἴρη παρείκα τῷ Βιβλίῳ κατὰ ἡγεμόνι (Tim2 4.14)} \]
\[ \text{The Lord will repay him according to his deeds} \]
The polysemy network of κατά in Coptic

- In the grammatical descriptions of Coptic
- It would mean that, among all the functions attested for the preposition in Post-Classical Greek, Coptic only borrowed the **two best attested meaning of κατά + ACC.**
- What do we see in the Coptic translations of the NT?
  - The meanings expressed by κατά + genitive are never PAT-transferred
  - Several meanings expressed by κατά + accusative are PAT-transferred

κατὰ δικαιοσύνην τὴν ἐν νόμῳ γενόμενος ἀμεμπτος (Phil 3.6)
αισθανόμενος κατὰ τὰ δικαιοσύνην ἐτών ὡς πνομος
κατὰ τὶς ὑμῶν ἐπὶ πανομος ἀισθανοῖ εἰς ὁνοματική
As to righteousness, being under the law blameless

The morphosyntactic integration of κατα

The assimilation [or integration] scale of a loanword can be established “in terms of productivity, of integration into the Coptic semasiological system, and (sometimes) in terms of phonological structure and properties – all three criteria presupposing in-depth monographic investigation [...]” (Shisha-Halevy 1986)

- Used productively in Coptic when Greek has another construction (e.g. πρός or διά + acc., adverbs, etc. (7 examples).
- The comparative locution ‘κατά θε + relative clause’ (litt. “after the manner that”) translates the following Greek adverbs and conjunctions: ώς [6], ὥσπερ [2], ώσαύτως), ἐφ’ ὦ [1; ‘because of this’], καθὰ [1], καθότι [4], καθάπερ [10], ὁμοίως καθὼς [1], καθώς [170]
- It inflects for person marking in Coptic, even though the pre-pronominal allomorph καταρο= seems to be systematically avoided in the NT translation ώς καί τινες τῶν καθ’ ὁμάς ποιητῶν εἰρήκασιν (Acta 17.28)

As even some of your own poets have said […]
The morphosyntactic integration of κατά

- The assimilation [or integration] scale of a loanword can be established “in terms of productivity, of integration into the Coptic semasiological system, and (sometimes) in terms of phonological structure and properties – all three criteria presupposing in-depth monographic investigation [...]” (Shisha-Halevy 1986)
  
  - Used productively in Coptic when Greek has another construction (e.g. πρός or διά + acc., adverbs, etc. (7 examples).
  
  - The comparative locution ‘κατά οἷς + relative clause’ (litt. “after the manner that”) translates the following Greek adverbs and conjunctions: ὡς [6], ὡσπερ [2], ὡςαύτως), ἐφ᾽ ὧ [1; ‘because of this’], καθὰ [1], καθότι [4], καθάπερ [10], ὁμοίως καθὼς [1], καθὼς [170]
  
  - It inflects for person marking in Coptic, even though the pre-pronominal allomorph καταρο= seems to be systematically avoided in the NT translation
  
  - Only S have it for reflexive meanings
The morphosyntactic integration of κατα

- However, as Grossman (2010) noted, unlike other Coptic prepositions
  - It does not mark valential arguments of verbs
  - It cannot be a predicate in the “adverbial predicate” clause construction (dedicated to adverbial and prepositional predicates)
  - (It is restricted collocationally)
Conclusion

- The semantics of the borrowed preposition is much richer than one could imagine when looking at the existing grammatical and lexicographical descriptions: mostly conceptual senses, but also spatial (*throughout*) and temporal (*during*) ones.

- It does not correspond to a clearly connected region (*connectivity hypothesis*) on a semantic map but rather to the more frequent meaning in the source language.

- The frequency apparently plays a major role, but cannot account for all the meaning that are borrowed (collocational approach is needed here, cf. κατά πολιτικ).

- The structure, system of opposition, of the target language, constrains the outcome of the borrowing in terms of PAT. This point is illustrated by the contrast between the uses of the preposition (PAT) in S and B (dialectal parameter is of primary significance, cf. reflexive construction).

- From global vs. Selective to *adaptative* copying.
