“REDEN UND RUFÉ”: ARE THEY KINGLEY PATTERNS?
PhD Student Aurore Motte

Introduction
The "Reden und Rufe", also known as "Arbeiterreden", are dialogues found in the so-called daily life scenes. Three major studies have been dedicated to the subject: Erman [1], Montet [2] and Guglielmi [3]. But, none explained when, where and why this genre appeared in private tombs. For my PhD research, whose subject is workers' speeches in private tombs from the Old Kingdom to the Late Period, I try to determine their origins and answer those questions.

Old Kingdom Context
During the 4th and the 5th Dynasties, royal ideology evolves, a change takes place in their mortuary complexes and a decorative program is set up. The "classical design" comprises a place of burial (pyramid), a mortuary temple, a causeway and a valley temple, plus a sun-temple in the 5th Dynasty. All these funerary monuments are badly preserved. Furthermore, those that were excavated during the last century would need a re-investigation while several of them still await for a proper excavation. According to el Awady [4], "what has survived from the original body of the Old Kingdom royal relief program hardly represents 1%".

When & where
Workers' speeches were fully part of this new decorative program. Based on the available material, they were found in the causeway, in the funerary temple or in the sun-temple.

Conclusion
In the current state of my research, eight kingly patterns (with workers' speeches) were found in elite tombs. In this way, the elite display their power and social status. They dress themselves as "miniature Pharaoh" by maintaining the Maat in the afterlife. Yet there is still numerous other speeches for which it is not possible to establish a relationship with royal funerary complexes. Is it due to the current state of monuments' preservation or is it there an indication of innovation by the elite?

Elite tombs
In private tombs, the fishing speech is divided in two separate speeches, except for the mastaba of Niankhkhnum & Khnumhotep and the mastaba of Sekhemka, where it could be understood as a whole speech again, with slight modifications. Here is its spreading across elite tombs by chronological order:
- Neferiretinef (Saqqara, Neferikare)***
- Niankhkhnum / Khnumhotep (Saq., Niuserre)
- Ti (Saqqara, Niuserre)**
- Irenkaptah (Saqqara, middle 5 Dyn.)*
- Phahotep iy n-nth (Saqqara, late 5 Dyn.)*
- Sekhemka (Giza, late 5 Dyn. – early 6 Dyn.)*
- Kagemni (Saqqara, Teti)**
- Pepiankh the Old (Meir, Pepi II)*
- Pepiankh the Middle (Meir, Pepi II)**
- Baqet III (Beni Hassan, Middle Kingdom)
One can find only one part of the speech, either the first (see *) or the second (see **), or the two parts (see ***). Other noteworthy changes pertain to the use of the deictic (pi in Neferiretinef and Irenkaptah's tomb instead of pw) and the absence of nn in the second part of the speech, except for Neferiretinef and Pepiankh the Middle.
