

Table 4. Characteristics associated with overall survival among *clinically fit* older patients with malignant haemopathies: multivariate cox regression (n=90)

	HR	95% CI	P
Sociodemographic characteristics			
Age*	1.094	1.009 to 1.185	0.029
Men vs. women	2.235	0.885 to 5.648	0.089
Disease-related characteristics			
Unfavorable prognosis vs. favorable prognosis	5.986	2.322 to 15.428	<0.001
Reduced-dose chemotherapy vs. full dose chemotherapy	1.536	0.566 to 4.167	0.400
Intolerance to treatment vs. no intolerance to treatment	1.485	0.576 to 3.715	0.398
Comprehensive Geriatric Assessment (CGA)			
Cognitive impairment vs. no cognitive impairment	3.504	1.132 to 10.849	0.030

*As a continuous variable
