# (The case of operatic singers – Definition)

# (The case of operatic singers – Evaluation)

# Pitch accuracy – Definition

# Mechanisms driving perception

## Categorical

Transformation of varying sensory signals into categorical internal representations

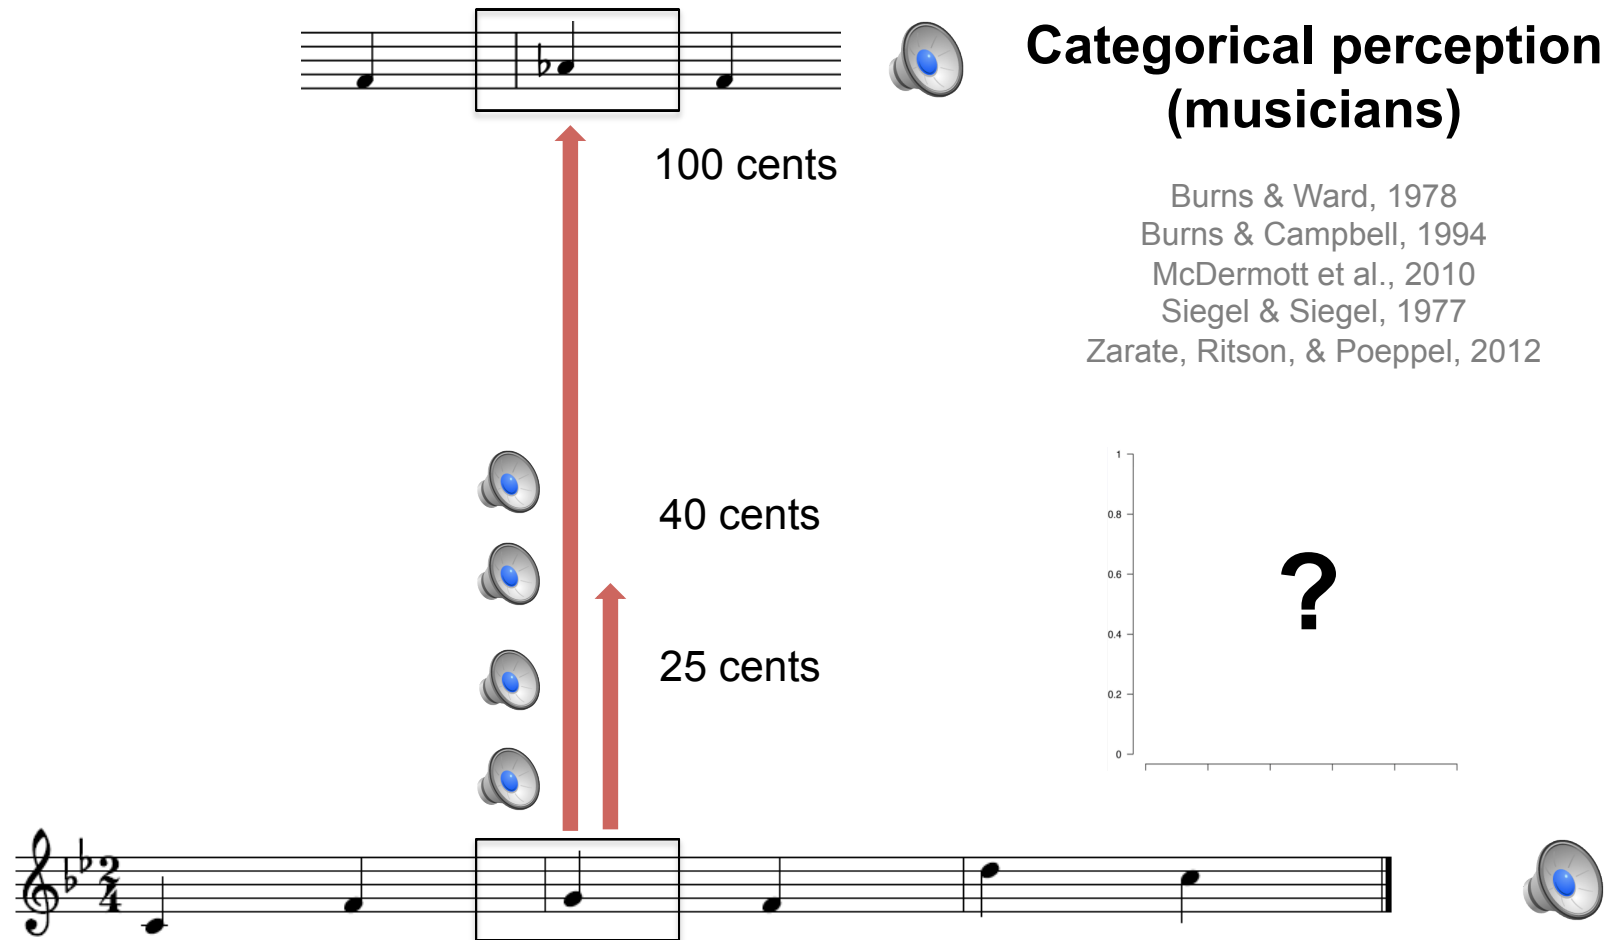

## Continuous

Perception (sometimes linearly) of the variation of sensory signals

# Perception of pitch accuracy in melodies: **A categorical or continuous phenomenon?**

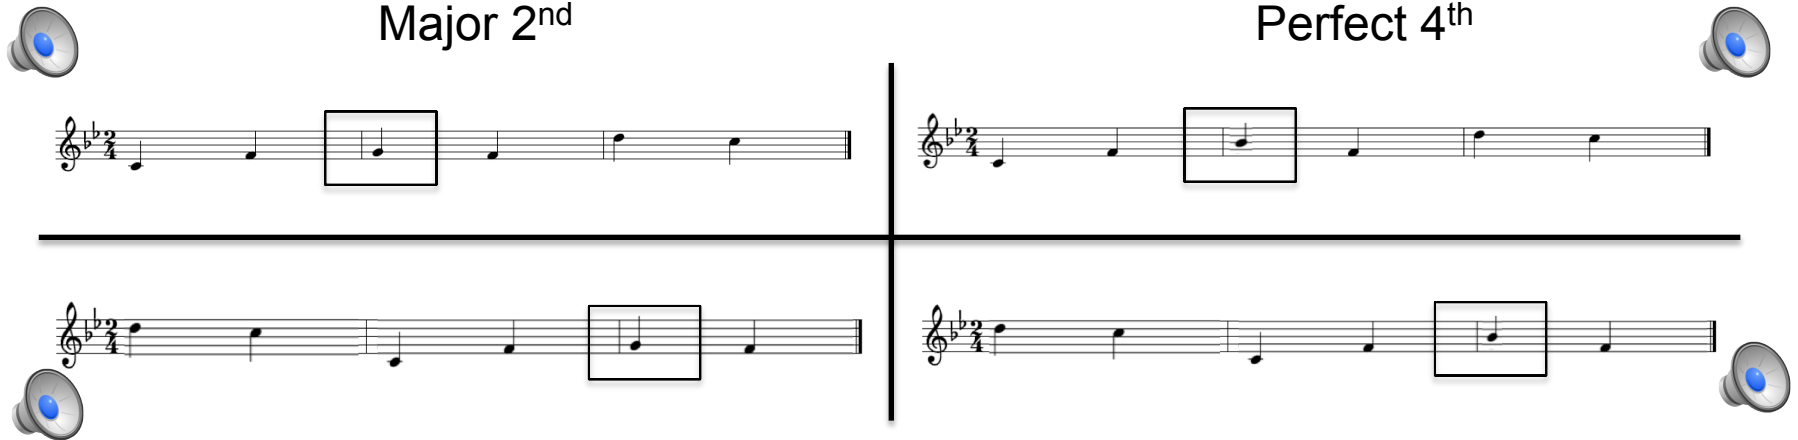

Pauline Larrouy-Maestri  
Simone Franz  
David Poeppel

# Mechanisms driving perception

# Perception of correctness - Material

**Major 2<sup>nd</sup>** **Perfect 4<sup>th</sup>**

Musical notation showing two intervals: Major 2<sup>nd</sup> and Perfect 4<sup>th</sup>. Each interval is presented in two examples, one with a speaker icon indicating audio playback.

# Perception of correctness - Procedure

Screening

PRE learning  
4 blocks  
random order deviations

**Identification**

In-tune    Out-of-tune

**Confidence**

0    1    2    3

Label learning  
1 melody (0 vs. 50 cents)  
Examples of labels  
Test with feedback  
Until 80% of correct answer

Selection  
1 block on the trained melody

POST learning  
4 blocks  
random order deviations

**Identification**

In-tune    Out-of-tune

**Confidence**

0    1    2    3

+ Retest 8 to 15 days later

# Individual differences (n = 50)

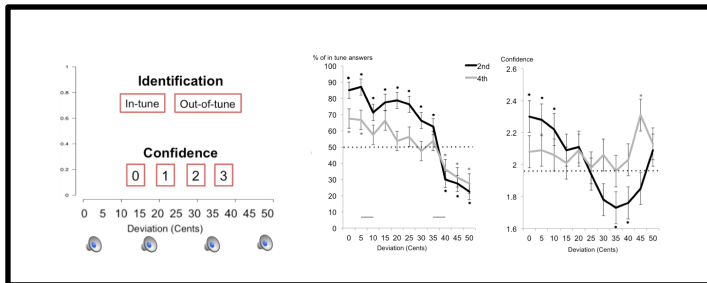

# Take home message – Future directions

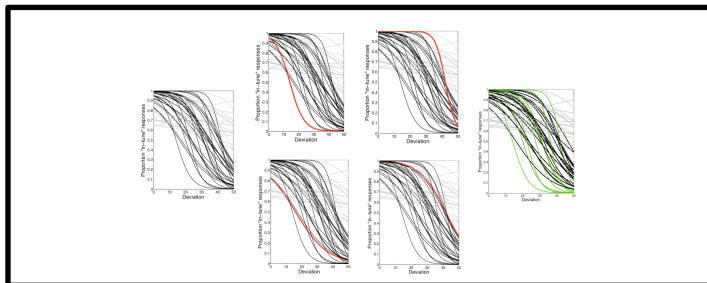

## Perception of pitch accuracy in melodies

- Pitch interval deviation is important
- Low tolerance, consistency
- No need of explicit learning

## Categorical and continuous phenomenon

- Correctness can be categorized
- Effect of material: Frequency? Size?

## Individual differences

- Two/three groups?
- Predictors?
- Cross-domain abilities?
