

# Grammar and graphical semiotics in early syntactic diagrams: Clark (1847) and Reed-Kellogg (1876)

Nicolas Mazziotta  
Université de Liège & Universität Stuttgart

ICHoLS – Paris, 28 août 2017

## Introduction

### Semiotic approach

The notion of reification

Graphical entities are complete signs

### Early syntactic diagramming

Drawing syntax before syntactic trees

Clark's seminal work (1847)

The successful Reed/Kellogg system (1876)

### Logic of space : Case studies

Subject-predicate relation

Coordination

Subordinate clauses

## Conclusion

# Introduction

# Introduction

## Elements at study

- ▶ Focus on **graphical depiction** of syntactic analysis

# Introduction

## Elements at study

- ▶ Focus on **graphical depiction** of syntactic analysis
- ▶ The diagrams at study date from the **19th C.** in the US, before current syntactic trees
  - ▶ **Paradigm-shift** from morphology to syntax
  - ▶ Focus on the “**deep structure**” (often, word order is abstracted away)

# Introduction

## Elements at study

- ▶ Focus on **graphical depiction** of syntactic analysis
- ▶ The diagrams at study date from the **19th C.** in the US, before current syntactic trees
  - ▶ **Paradigm-shift** from morphology to syntax
  - ▶ Focus on the “**deep structure**” (often, word order is abstracted away)
- ▶ Compared systems are similar from the point of view of grammatical theory

# Introduction

## Elements at study

- ▶ Focus on **graphical depiction** of syntactic analysis
- ▶ The diagrams at study date from the **19th C.** in the US, before current syntactic trees
  - ▶ **Paradigm-shift** from morphology to syntax
  - ▶ Focus on the “**deep structure**” (often, word order is abstracted away)
- ▶ Compared systems are similar from the point of view of grammatical theory

## Objectives

- ▶ Identify the graphical entities used to represent grammatical units in the diagram
- ▶ Compare their behaviour

# Introduction

## Elements at study

- ▶ Focus on **graphical depiction** of syntactic analysis
- ▶ The diagrams at study date from the **19th C.** in the US, before current syntactic trees
  - ▶ **Paradigm-shift** from morphology to syntax
  - ▶ Focus on the “**deep structure**” (often, word order is abstracted away)
- ▶ Compared systems are similar from the point of view of grammatical theory

## Objectives

- ▶ Identify the graphical entities used to represent grammatical units in the diagram
- ▶ Compare their behaviour
- ▶ Evaluate the **theoretical consequences**

## Introduction

### Semiotic approach

The notion of reification

Graphical entities are complete signs

### Early syntactic diagramming

Drawing syntax before syntactic trees

Clark's seminal work (1847)

The successful Reed/Kellogg system (1876)

### Logic of space : Case studies

Subject-predicate relation

Coordination

Subordinate clauses

## Conclusion

# The notion of reification

## Various ways to represent the relations between words

- ▶ Some look different but are similar
- ▶ Some look similar but are (very) different

# The notion of reification

## Various ways to represent the relations between words

- ▶ Some look different but are similar
- ▶ Some look similar but are (very) different

## Formal and semiotic analyses help...

- ▶ Identifying units inside a given system
- ▶ Comparing units across systems

# The notion of reification

## Various ways to represent the relations between words

- ▶ Some look different but are similar
- ▶ Some look similar but are (very) different

## Formal and semiotic analyses help...

- ▶ Identifying units inside a given system
- ▶ Comparing units across systems

## Conceptual units are turned into graphical entities

- ▶ They are **reified** (i.e. 'turned into objects' Kahane/Mazziotta 2015) in the diagram
- ⇒ The graphical entity is bound to the conceptual unit

# Graphical entities are complete signs

A stroke is not a mere stroke :  
it is a complete sign (form and value)

(Billroth 1832 : 102)

**Model.** — *The finest trout in the lake are generally caught in the deepest water.*

(Reed/Kellogg 1879[1876] : 62)

# Graphical entities are complete signs

A stroke is not a mere stroke :  
it is a complete sign (form and value)

(Billroth 1832 : 102)

**Model.** — *The finest trout in the lake are generally caught in the deepest water.*

(Reed/Kellogg 1879[1876] : 62)

## Comparison

- ▶ words (conceptual units) are reified by words
- ▶ relations (conceptual units) are reified by strokes

# Graphical entities are complete signs

A stroke is not a mere stroke :  
it is a complete sign (form and value)

(Billroth 1832 : 102)

**Model.** — *The finest trout in the lake are generally caught in the deepest water.*

(Reed/Kellogg 1879[1876] : 62)

## Comparison

- ▶ words (conceptual units) are reified by words
- ▶ relations (conceptual units) are reified by strokes
- ▶ words are reified by labeled strokes
- ▶ relations are mostly reified by the relative positions of words

## Introduction

### Semiotic approach

The notion of reification

Graphical entities are complete signs

### Early syntactic diagramming

Drawing syntax before syntactic trees

Clark's seminal work (1847)

The successful Reed/Kellogg system (1876)

### Logic of space : Case studies

Subject-predicate relation

Coordination

Subordinate clauses

## Conclusion

# Early syntactic diagramming

## Continuity between Clark 1847 and Reed/Kellogg 1876

Most diagrams seem to reify words rather than relations

(Clark 1847 : 23)

# Early syntactic diagramming

## Continuity between Clark 1847 and Reed/Kellogg 1876

Most diagrams seem to reify words rather than relations

(Chandler 1860 : 153, apud Brittain 1973)

# Early syntactic diagramming

## Continuity between Clark 1847 and Reed/Kellogg 1876

Most diagrams seem to reify words rather than relations

(Jewell 1861 : 17, apud Brittain 1973)

# Early syntactic diagramming

## Continuity between Clark 1847 and Reed/Kellogg 1876

Most diagrams seem to reify words rather than relations

(Burt 1869 : 265, apud Brittain 1973)

# Early syntactic diagramming

## Continuity between Clark 1847 and Reed/Kellogg 1876

Most diagrams seem to reify words rather than relations

(Lighthall 1872 : 50, apud Brittain 1973)

# Clark's seminal work (1847)

## General rules

# Clark's seminal work (1847)

## General rules

- ▶ The sentence is a combination of a **subject**, a **predicate** and, optionally, an **object**

(Clark 1870 : 49)

**Horizontally** arranged bubbles

# Clark's seminal work (1847)

## General rules

- ▶ The sentence is a combination of a subject, a predicate and, optionally, an object
- ▶ These elements can be complemented by **adjuncts**

(Clark 1847 : 23)

**Vertically** connected bubbles (recursive)

# Clark's seminal work (1847)

## General rules

- ▶ The sentence is a combination of a subject, a predicate and, optionally, an object
- ▶ These elements can be complemented by adjuncts
- ▶ **Prepositional phrases** are a combination of a preposition (*leader*) and a noun (*subsequent*)

(Clark 1847 : 23)

**Vertically** connected bubble for the leader, **horizontally** arranged with its subsequent

# The successful Reed/Kellogg system (1876)

## General rules

# The successful Reed/Kellogg system (1876)

## General rules

- ▶ The sentence is a combination of a **subject**, a **predicate** optionally containing an **object**

(Reed/Kellogg 1879[1876] : 17)

**Horizontally** arranged strokes

# The successful Reed/Kellogg system (1876)

## General rules

- ▶ The sentence is a combination of a subject, a predicate optionally containing an object
- ▶ These elements can be complemented by **modifiers**

(Reed/Kellogg 1879[1876] : 34)

**Vertically** connected strokes (recursive)

# The successful Reed/Kellogg system (1876)

## General rules

- ▶ The sentence is a combination of a subject, a predicate optionally containing an object
- ▶ These elements can be complemented by modifiers
- ▶ **Prepositional phrases** are a combination of a *preposition* and a *noun*

. **Model.** — *The finest trout in the lake are generally caught in the deepest water.*

(Reed/Kellogg 1879[1876] : 62)

**Vertically** connected stroke for the preposition, **horizontally** arranged with the noun

# Early syntactic diagramming

The rationales in Clark 1847 and Reed/Kellogg 1876 are roughly the same

# Early syntactic diagramming

The rationales in Clark 1847 and Reed/Kellogg 1876 are roughly the same

- ▶ Distinction between principal parts and adjuncts/modifiers
- ▶ Hybrid status for prepositional phrases

# Early syntactic diagramming

The rationales in Clark 1847 and Reed/Kellogg 1876 are roughly the same

- ▶ Distinction between principal parts and adjuncts/modifiers
- ▶ Hybrid status for prepositional phrases

Visual entities differ

# Early syntactic diagramming

The rationales in Clark 1847 and Reed/Kellogg 1876 are roughly the same

- ▶ Distinction between principal parts and adjuncts/modifiers
- ▶ Hybrid status for prepositional phrases

Visual entities differ

- ▶ Clark : words are represented by **bubbles** (bidimensional)

# Early syntactic diagramming

The rationales in Clark 1847 and Reed/Kellogg 1876 are roughly the same

- ▶ Distinction between principal parts and adjuncts/modifiers
- ▶ Hybrid status for prepositional phrases

Visual entities differ

- ▶ Clark : words are represented by **bubbles** (bidimensional)
- ▶ Reed/Kellogg : words are represented by **strokes** with a specific angle (monodimensional)

# Early syntactic diagramming

The rationales in Clark 1847 and Reed/Kellogg 1876 are roughly the same

- ▶ Distinction between principal parts and adjuncts/modifiers
- ▶ Hybrid status for prepositional phrases

Visual entities differ

- ▶ Clark : words are represented by **bubbles** (bidimensional)
- ▶ Reed/Kellogg : words are represented by **strokes** with a specific angle (monodimensional)

**What are the consequences ?**

## Introduction

### Semiotic approach

The notion of reification

Graphical entities are complete signs

### Early syntactic diagramming

Drawing syntax before syntactic trees

Clark's seminal work (1847)

The successful Reed/Kellogg system (1876)

### Logic of space : Case studies

Subject-predicate relation

Coordination

Subordinate clauses

## Conclusion

# Subject-predicate relation

Clark

(Clark 1870 : 49)

# Subject-predicate relation

Clark

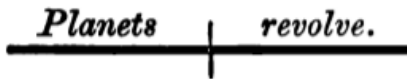

(Clark 1870 : 49)

# Subject-predicate relation

Reed/Kellogg

*Planets* | *revolve.*

(Reed/Kellogg 1879[1876] : 17)

# Subject-predicate relation

## Reed/Kellogg

(Reed/Kellogg 1879[1876] : 17)

“I will draw on the board a heavy, or shaded, line, and **divide it** into two parts [...] I will consider the first part as a sign of the subject of a sentence, and the second part as a sign of the predicate of a sentence.” (Reed/Kellogg 1879[1876] : 17)

# Subject-predicate relation

# Subject-predicate relation

## Comparison

- ▶ Clark : two entities (bubbles) arranged horizontally

# Subject-predicate relation

## Comparison

- ▶ Clark : two entities (bubbles) arranged horizontally
- ▶ Reed/Kellogg : three entities (strokes), including a specific entity for the Subject/Predicate relation

# Subject-predicate relation

## Comparison

- ▶ Clark : two entities (bubbles) arranged horizontally
- ▶ Reed/Kellogg : three entities (strokes), including a specific entity for the Subject/Predicate relation

⇒ Using strokes offers no solution but to introduce an **additional** entity

# Coordination

## Clark

*"In the beginning God created the heaven and the earth."*

(14.)

(Clark 1847 : 24)

# Coordination

## Clark

*"In the beginning God created the heaven and the earth."*

(14.)

(Clark 1847 : 24)

# Coordination

## Reed/Kellogg

**Models.** — *Napoleon rose, reigned, and fell.*  
*Frogs, antelopes, and kangaroos can jump.*

(Reed/Kellogg 1879[1876] : 48)

# Coordination

## Reed/Kellogg

**Models.** — *Napoleon rose, reigned, and fell.*  
*Frogs, antelopes, and kangaroos can jump.*

(Reed/Kellogg 1879[1876] : 48)

“The short line following the subject line represents the **entire predicate**, and is supposed to be continued in the three horizontal lines that follow, each of which represents one of the **parts** of the compound predicate. These lines are united by **dotted lines**, which stand for the connecting words. The × denotes that an *and* is understood.” (Reed-Kellogg 1879[1876] : 47-48)

# Coordination

## Comparison

# Coordination

## Comparison

- ▶ Clark : no more entities than words

# Coordination

## Comparison

- ▶ Clark : no more entities than words
- ▶ Reed-Kellogg :
  - ▶ one entity reifies independently the “entire predicate”,

# Coordination

## Comparison

- ▶ Clark : no more entities than words
- ▶ Reed-Kellogg :
  - ▶ one entity reifies independently the “entire predicate”,
  - ▶ other strokes reify its “parts” and are linked by lighter strokes reifying the part-whole structure

# Coordination

## Comparison

- ▶ Clark : no more entities than words
- ▶ Reed-Kellogg :
  - ▶ one entity reifies independently the “entire predicate”,
  - ▶ other strokes reify its “parts” and are linked by lighter strokes reifying the part-whole structure
  - ▶ the special relational status of the conjunction is symbolically rendered

# Coordination

## Comparison

- ▶ Clark : no more entities than words
- ▶ Reed-Kellogg :
  - ▶ one entity reifies independently the “entire predicate”,
  - ▶ other strokes reify its “parts” and are linked by lighter strokes reifying the part-whole structure
  - ▶ the special relational status of the conjunction is symbolically rendered

⇒ Using **strokes with a specific angle** offers no solution but to introduce an additional entity

# Subordinate clauses

Clark

(Clark 1870 : 47)

# Subordinate clauses

Clark

(Clark 1870 : 47)

# Subordinate clauses

## Reed/Kellogg

(Reed/Kellogg 1879[1876] : 137)

# Subordinate clauses

## Reed/Kellogg

(Reed/Kellogg 1879[1876] : 137)

“As this [sentence] subject **cannot**, in its proper form, be written on the subject line, it is placed above, and, by means of a **support**, the [sentence] diagram is made to rest on the subject line.”

(Reed/Kellogg 1879[1876] : 107)

# Subordinate clauses

## Comparison

# Subordinate clauses

## Comparison

- ▶ Clark : one bubble per word + one bubble for the sentence used as a constituent

# Subordinate clauses

## Comparison

- ▶ Clark : one bubble per word + one bubble for the sentence used as a constituent
- ▶ Reed-Kellogg : additional symbolic stroke between the sentence as a constituents and its decomposition

# Subordinate clauses

## Comparison

- ▶ Clark : one bubble per word + one bubble for the sentence used as a constituent
- ▶ Reed-Kellogg : additional symbolic stroke between the sentence as a constituents and its decomposition

⇒ The monodimensionality of strokes **does not allow to depict inclusion** in an iconic way

## Introduction

### Semiotic approach

The notion of reification

Graphical entities are complete signs

### Early syntactic diagramming

Drawing syntax before syntactic trees

Clark's seminal work (1847)

The successful Reed/Kellogg system (1876)

### Logic of space : Case studies

Subject-predicate relation

Coordination

Subordinate clauses

## Conclusion

## Consequences of using strokes with a specific angle

- ▶ it makes it impossible not to reify intermediate units (relations)
- ▶ it emphasizes the reified expression of part-whole relations

# Conclusion

## **Grammatical theory and graphical conventions**

- ▶ Interfere with one another
- ▶ Conceptual units are reified
- ▶ The choice of the graphical conventions constrain what can be expressed and how

# Conclusion

## Grammatical theory and graphical conventions

- ▶ Interfere with one another
- ▶ Conceptual units are reified
- ▶ The choice of the graphical conventions constrain what can be expressed and how

## History of syntactic diagramming

- ▶ Necessitates a semiotic analysis that break down diagrams into entities
- ▶ Shows the evolution between similar systems
