## Agroecosystems

- Functional diversity and mowing regime of flower strips as tools to support pollinators and to suppress weeds
- Testing the contribution of ecological infrastructures to biodiversity, pollination and pest control services
- Assessing the contribution of agroecological farming systems to the delivery of ecosystem services
- Developing methods to assess ecosystem services using drones

## BELBEES

Assessment of the factors responsible for the decline of wild bees at the Belgian scale to identify field action combinations needed to restore pollination service in agroecosystems. [www.belbees.be](http://www.belbees.be)

**SAPOLL** **SAPOLL**  
SAPOLL logo with text: Samenwerken voor pollinatoren

Setting up of a cross-border action plan in favor of wild pollinators and the services they provide with the actors of Wallonia, Flanders and the North of France. [sapoll.eu](http://sapoll.eu)

## BIOECOSYS

Qualitative and quantitative assessment of ES provided by grasslands according to their management and their territorial context
