

Oceanographic data

From sensors to final users

C. Troupin (SOCIB)

May 26, 2015

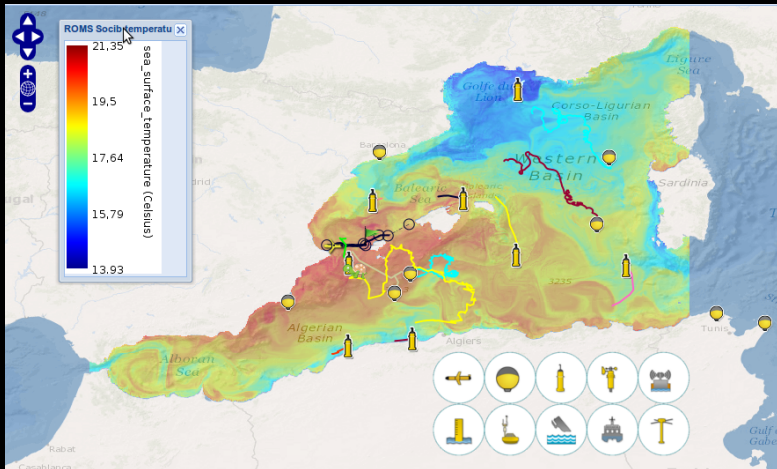

Multi-platforms observing systems

Necessary for understand and predicting the ocean
possible thanks to technological developments

Multi-platforms observing systems

Requirement: "to be present in multiple places in multiple times"
Data everything available here and now

Doing more than making data available

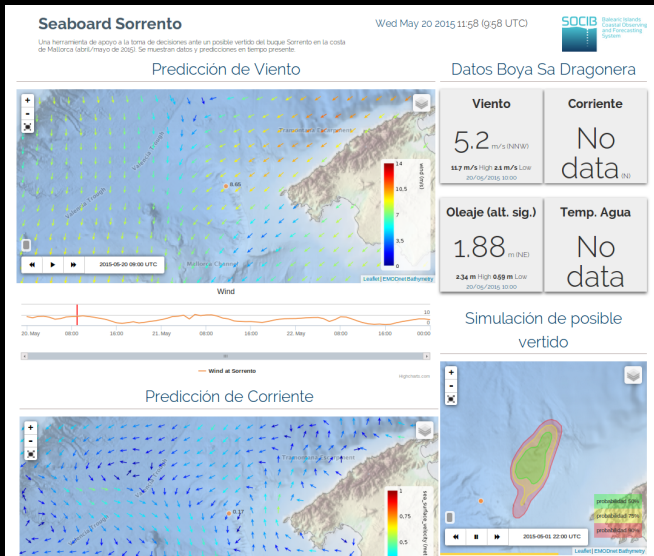

Connecting **data** to **users** and **developers**

Sorrento ferry on fire, 17 miles west of Mallorca, April 28, 2015

Doing more than making data available

Connecting data to users and developers

Conclusions & messages

1

Multi-platform systems: scientific requirement,
allowed by technological developments

Conclusions & messages

1

Multi-platform systems: scientific requirement, allowed by technological developments

2

Open access to data: necessary but not sufficient

Conclusions & messages

1

Multi-platform systems: scientific requirement, allowed by technological developments

2

Open access to data: necessary but not sufficient

3

Create job from data: build tools and services to facilitate data access to users and developers
