

Figure 1

Alcohol priming induces reinstatement of alcohol place preference

Figure 2

mTORC1 is activated in the nucleus accumbens during reinstatement of alcohol place preference

Figure 3

mTORC1 activation following priming-induced reinstatement of alcohol-CPP is restricted to the NAc shell

Figure 4
Systemic administration of the mTORC1 inhibitor Rapamycin prevents
reinstatement of alcohol place preference

Figure 5

CRMP2 protein level are increased in the nucleus accumbens following priming-induced reinstatement of alcohol place preference

Figure 6
Systemic administration of the CRMP2 inhibitor Lacosamide prevents reinstatement of alcohol place preference
