

Ductility assessment of structural steel and composite joints

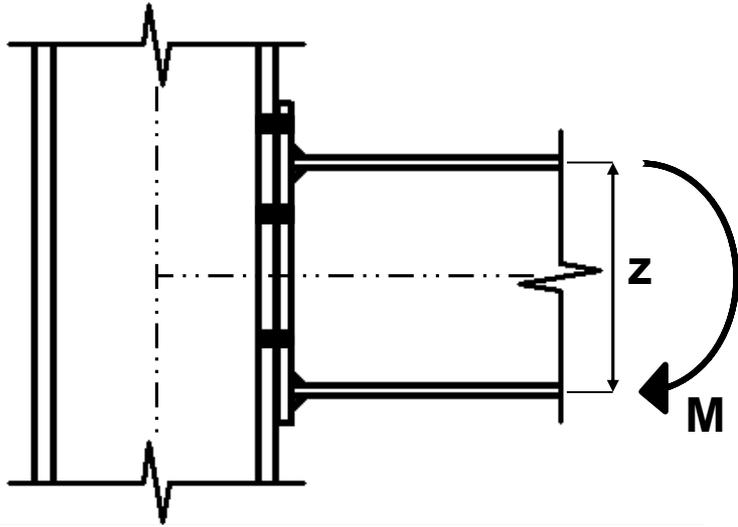

Jean-Pierre Jaspart

Adrien Corman

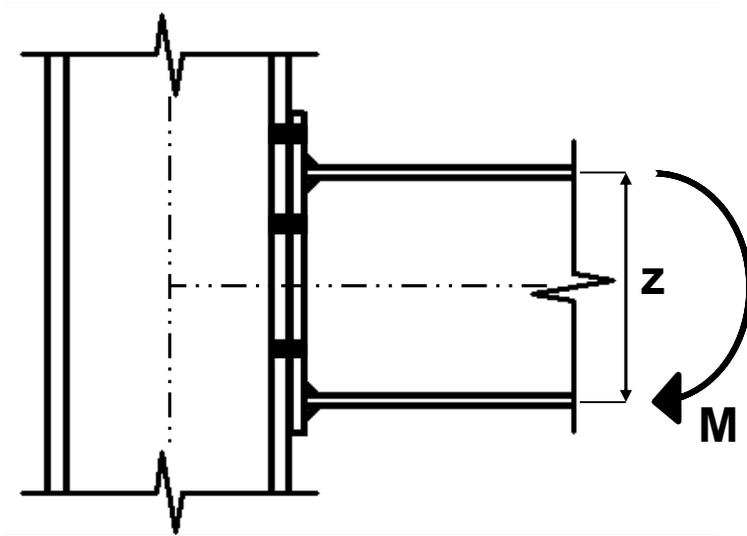

Jean-François Demonceau

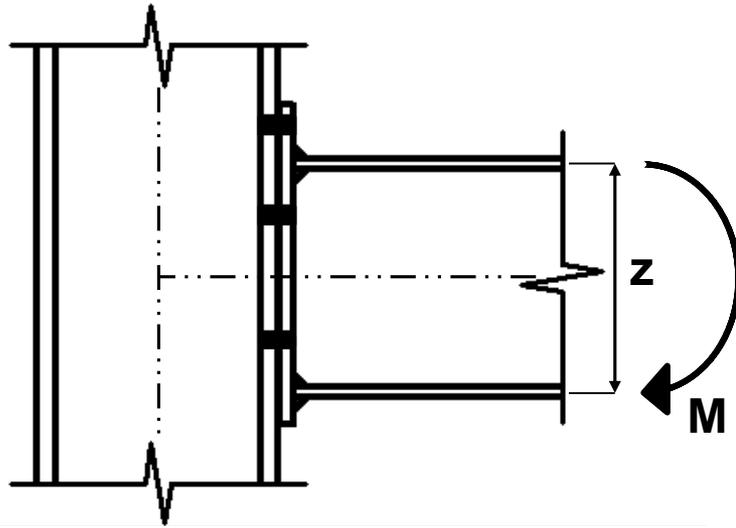

Introduction: joint behaviour

Introduction: joint behaviour

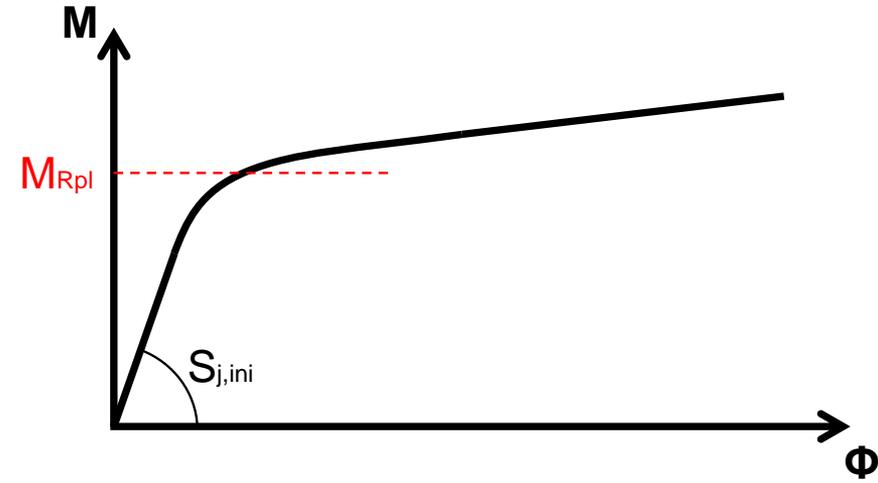

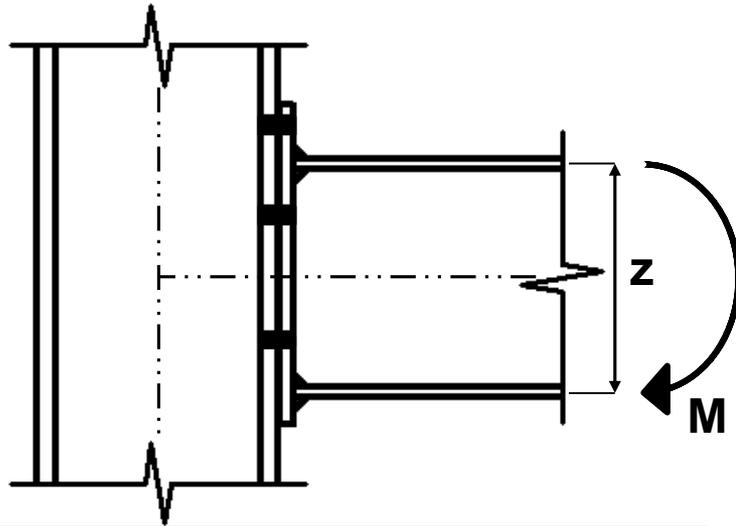

Introduction: joint behaviour

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

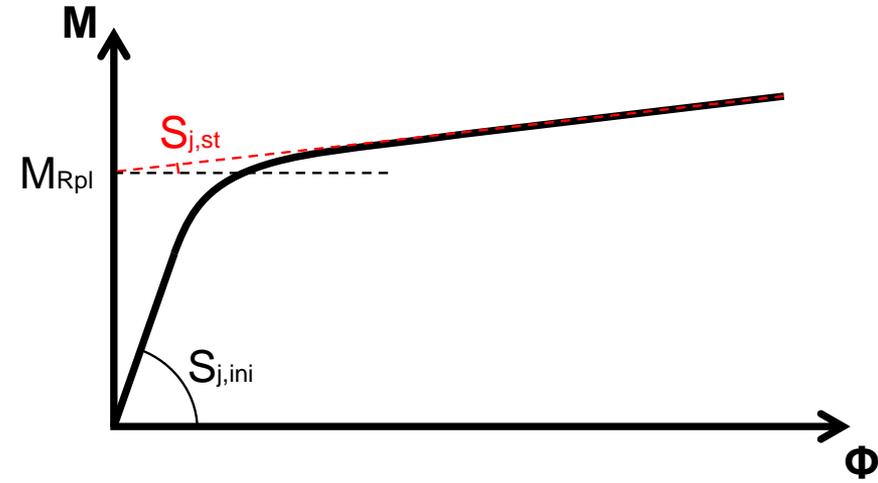

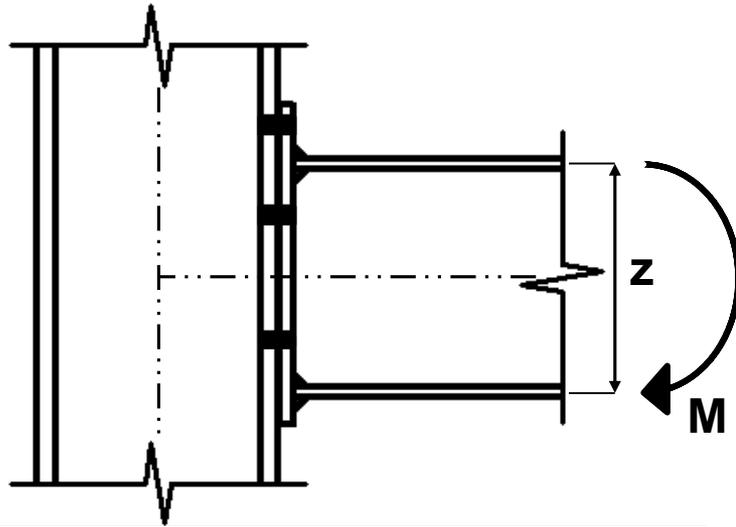

Introduction: joint behaviour

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

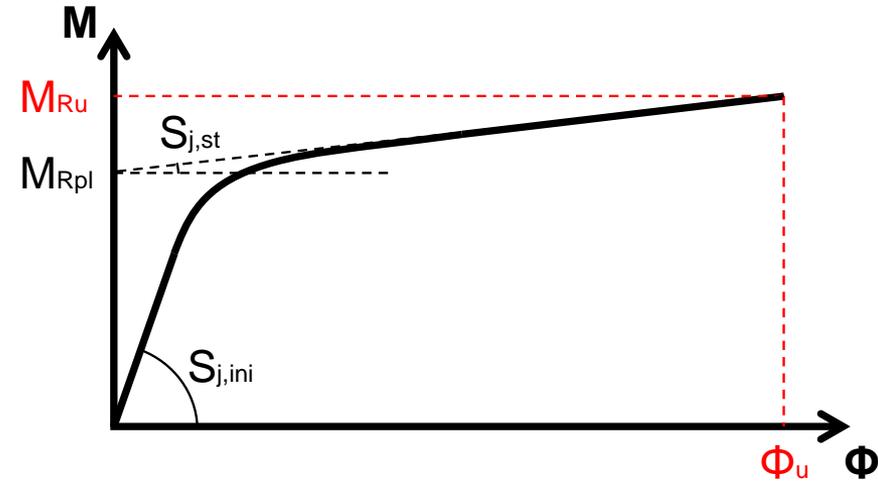

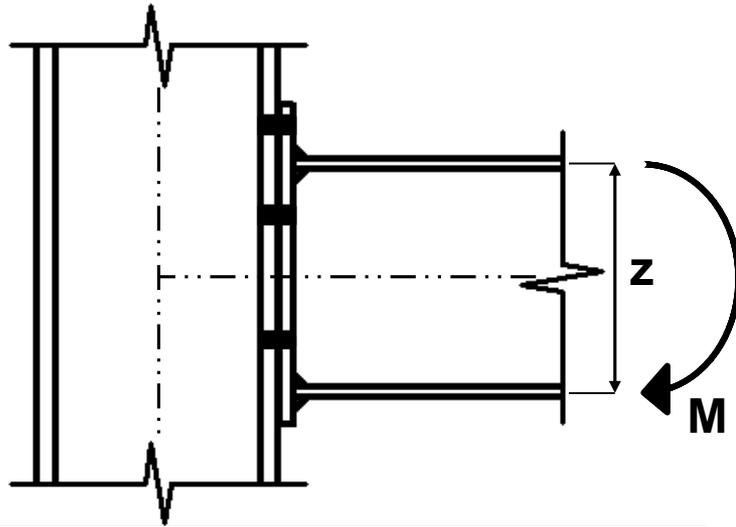

Introduction: joint behaviour

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- **Post-plastic stiffness**
- Ultimate bending resistance

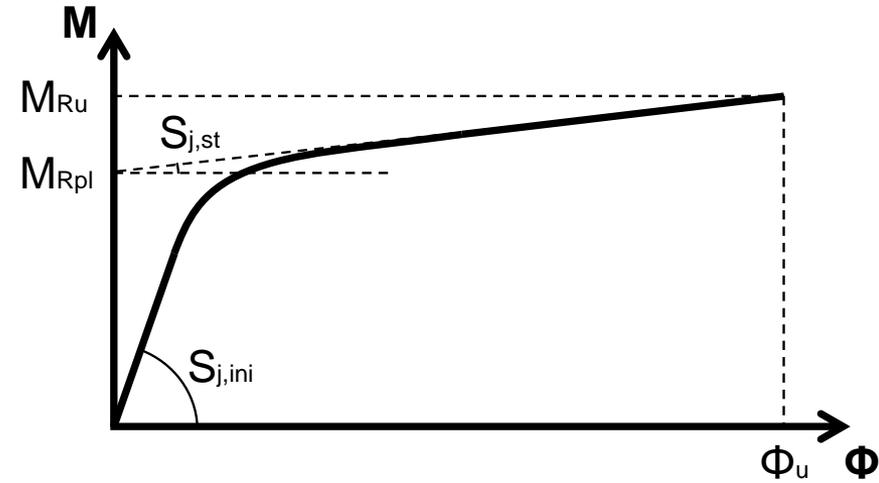

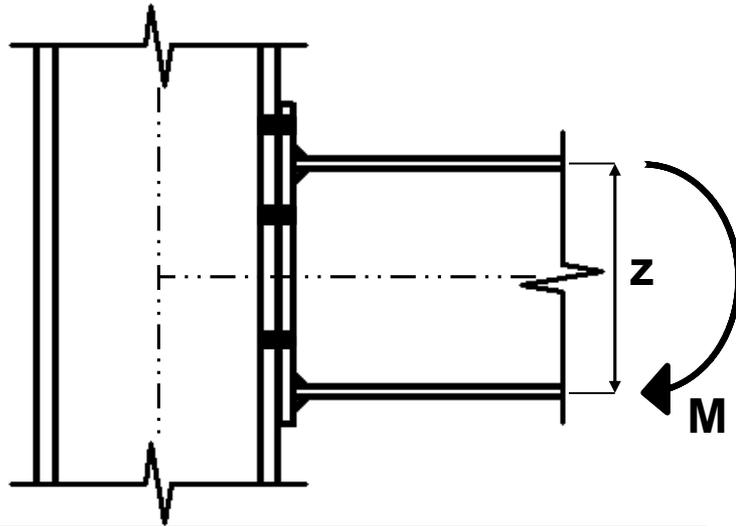

Introduction: joint behaviour

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- **Ultimate bending resistance**

Introduction: the component method

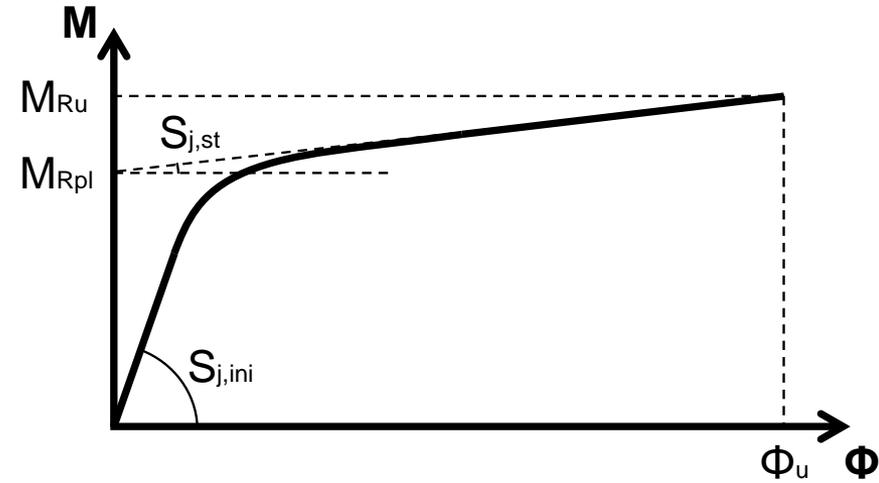

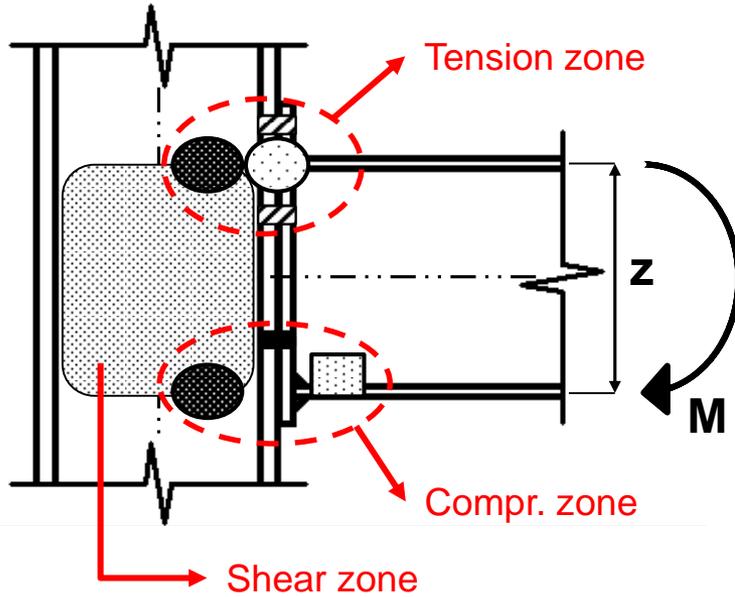

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

Introduction: the component method

1. Identification

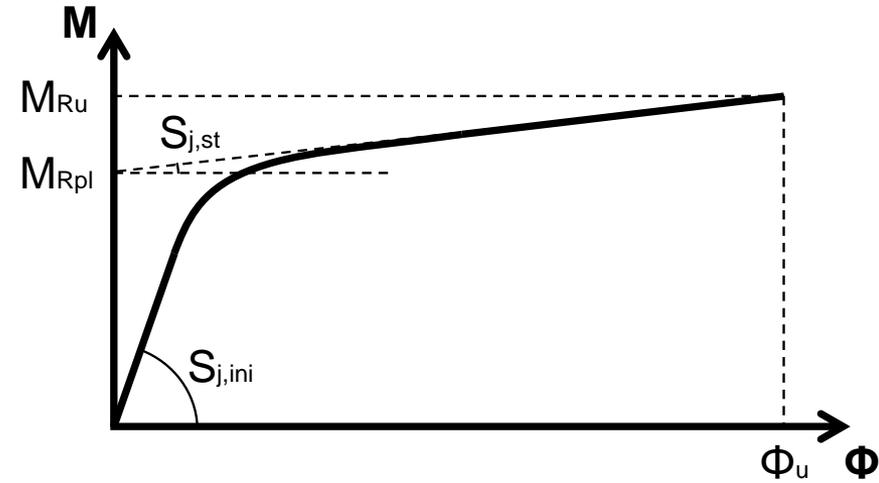

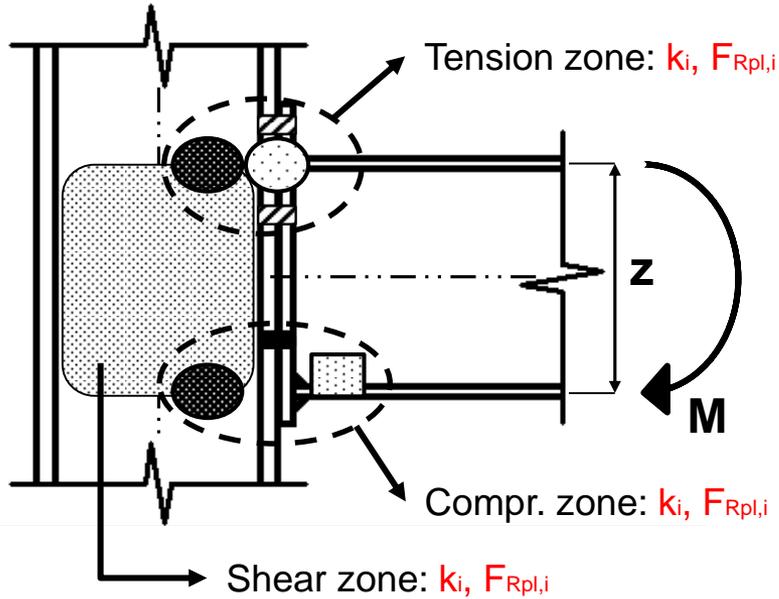

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

Introduction: the component method

2. Characterization

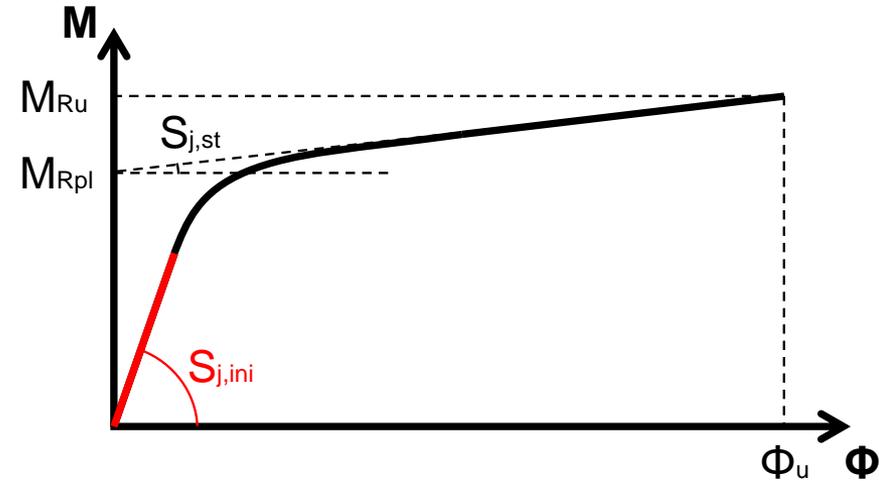

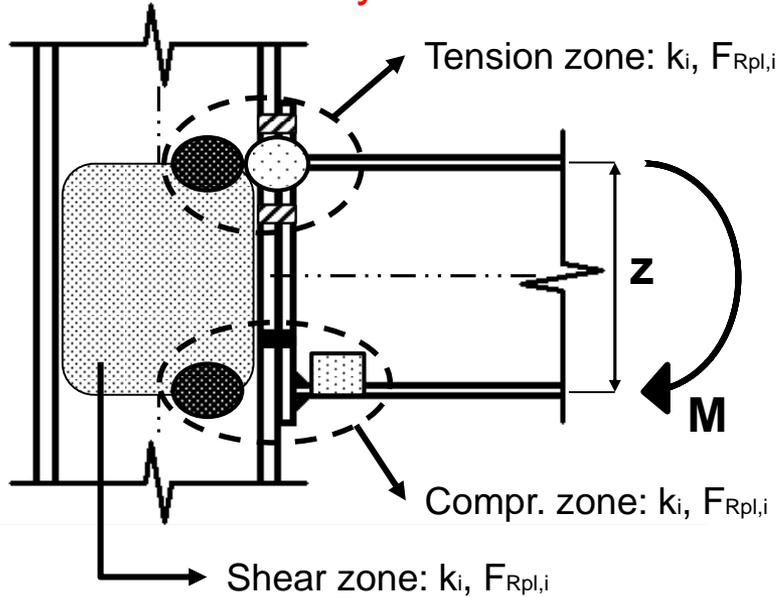

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

Introduction: the component method

3. Assembly

→ 4 key parameters

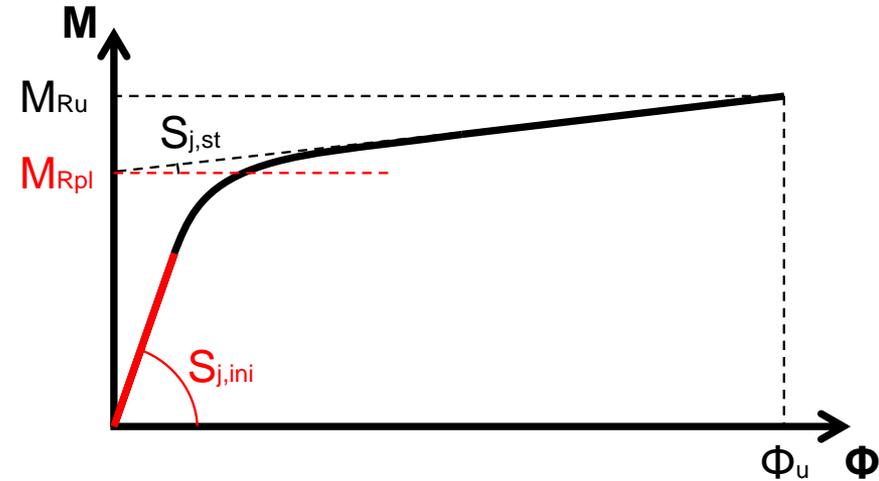

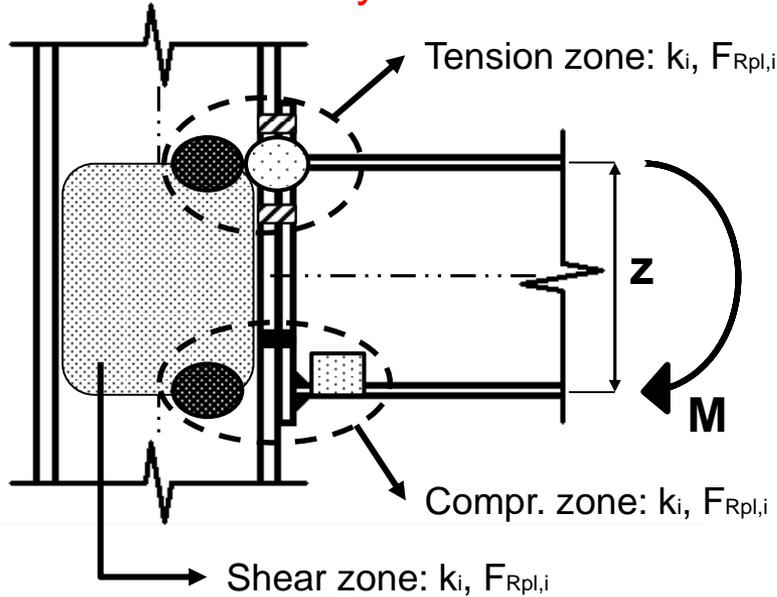

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

$$S_{j,ini} = \frac{Ez^2}{\sum_i 1/k_i}$$

Introduction: the component method

3. Assembly

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

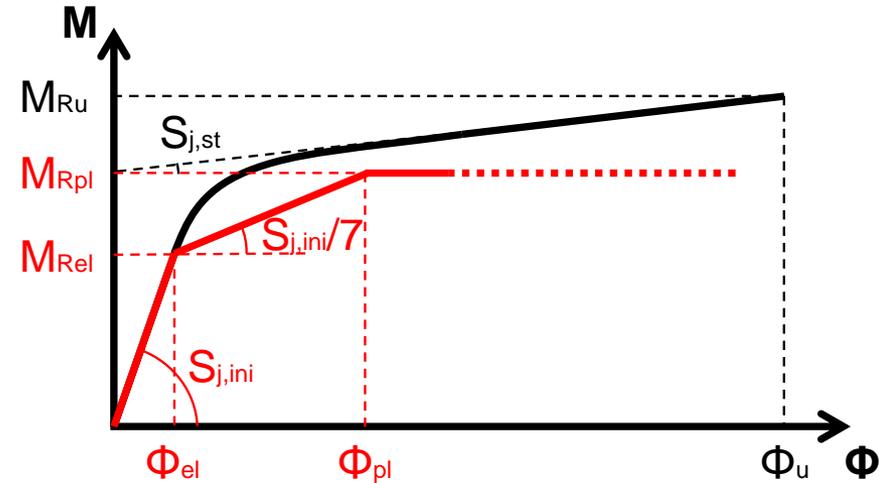

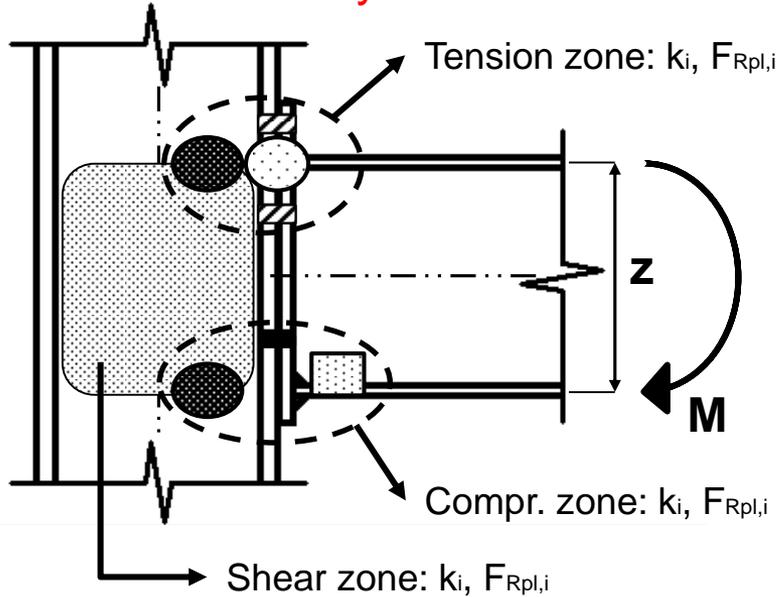

$$S_{j,ini} = \frac{Ez^2}{\sum_i 1/k_i}$$

$$M_{Rpl} = \min(F_{Rpl,i}) \cdot z$$

Introduction: the component method

3. Assembly

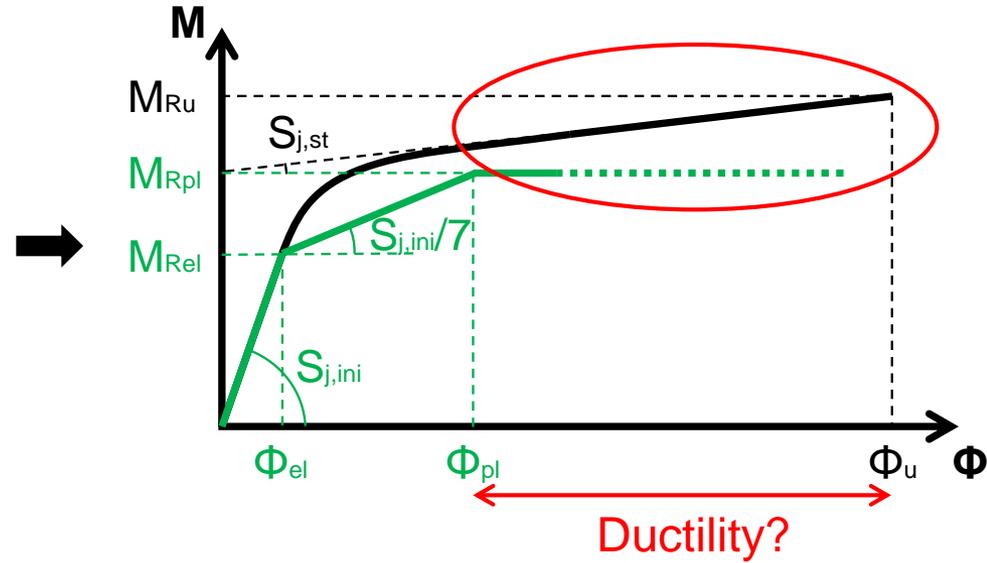

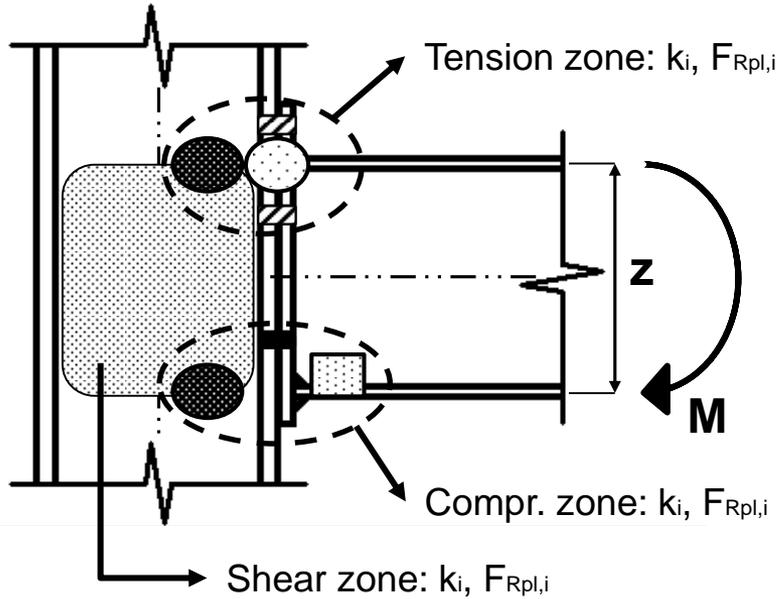

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

$$S_{j,ini} = \frac{Ez^2}{\sum_i 1/k_i}$$

$$M_{Rpl} = \min(F_{Rpl,i}) \cdot z$$

Problem: ductility assessment

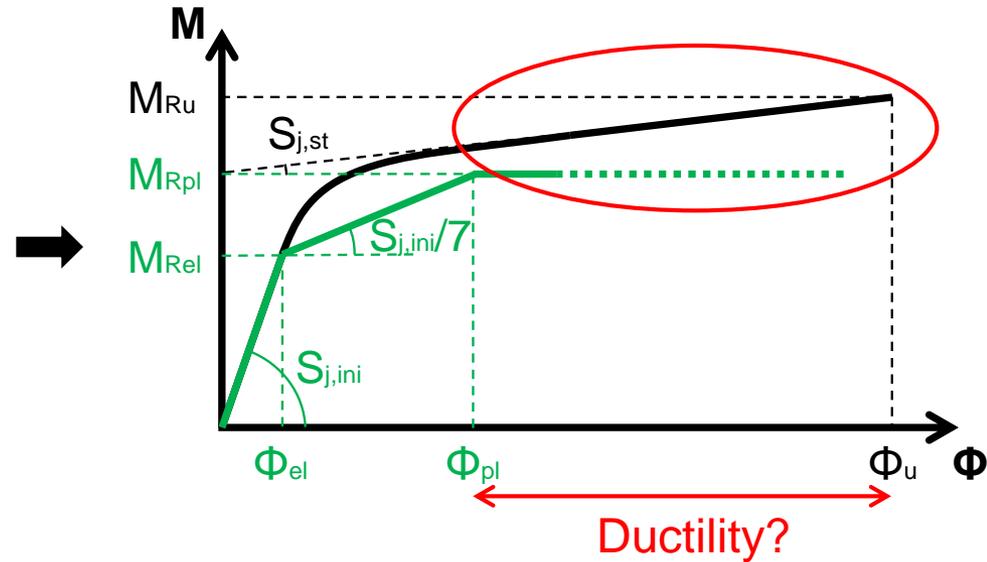

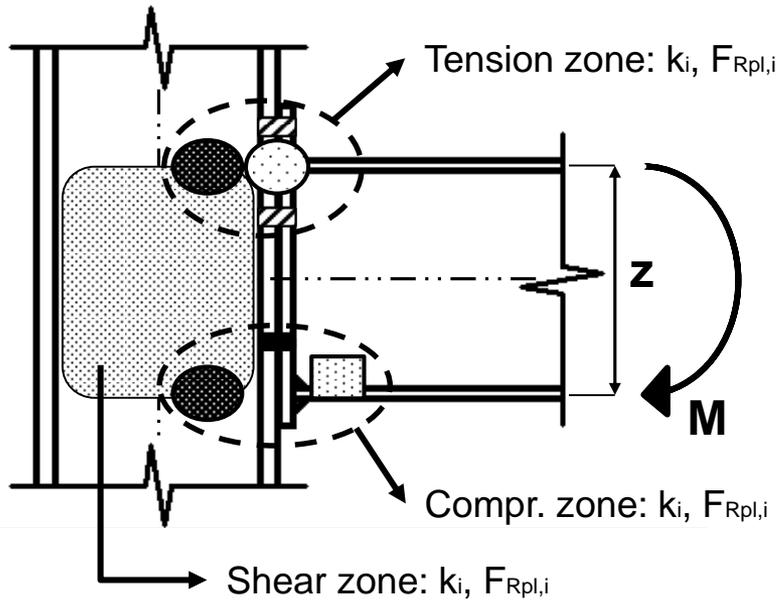

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

$$S_{j,ini} = \frac{Ez^2}{\sum_i 1/k_i}$$

$$M_{Rpl} = \min(F_{Rpl,i}) \cdot z$$

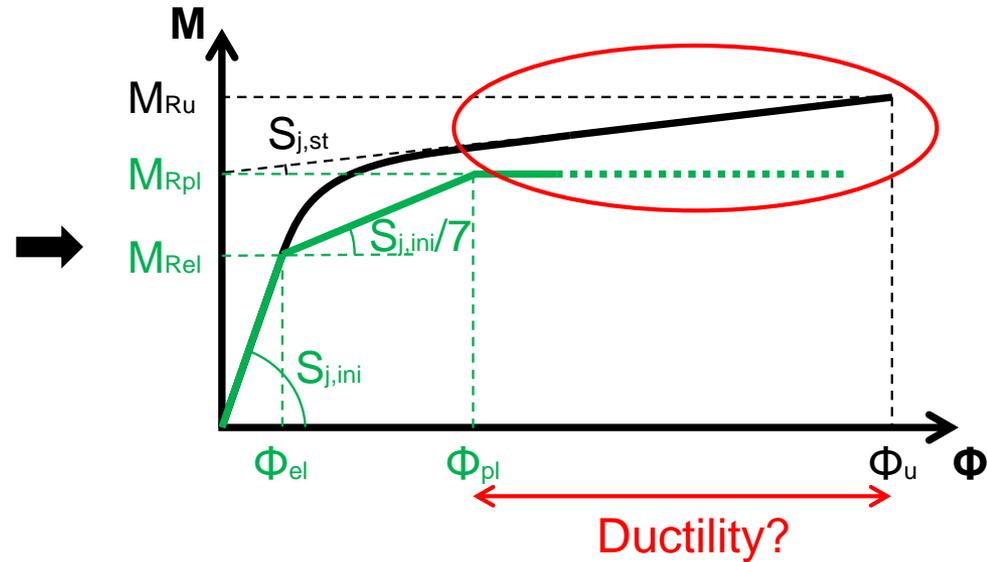

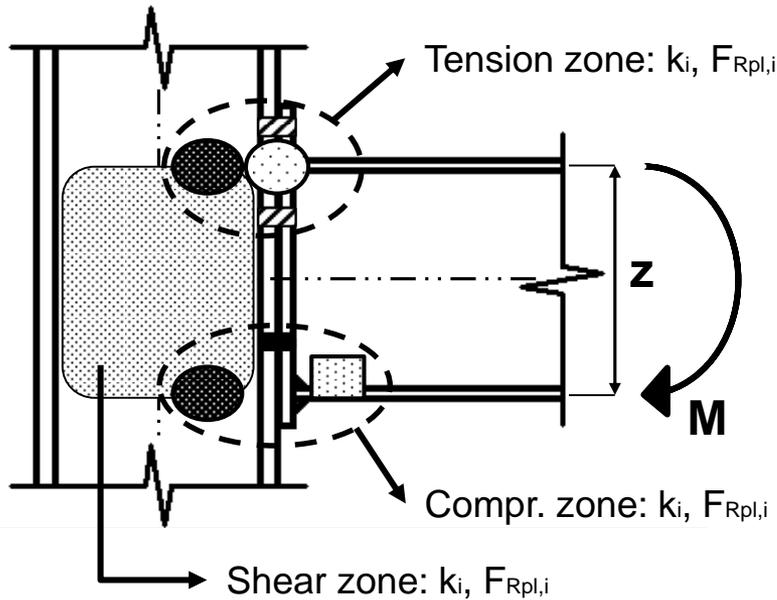

Problem: ductility assessment

→ Need for joint ductility:

- Design of a structure based on a plastic global analysis
- Mitigation of the risk of progressive collapse under exceptional loading
- Energy dissipation under earthquakes

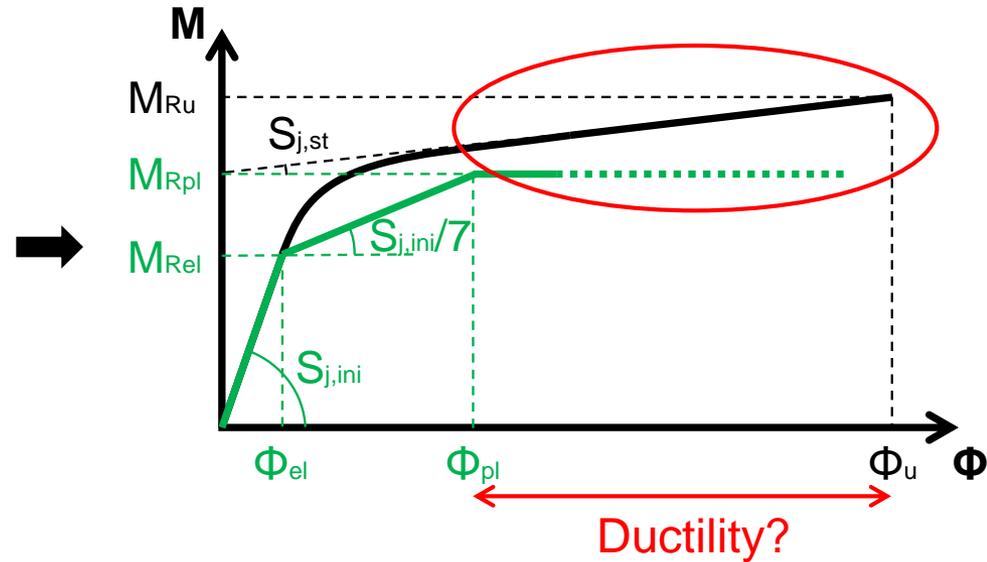

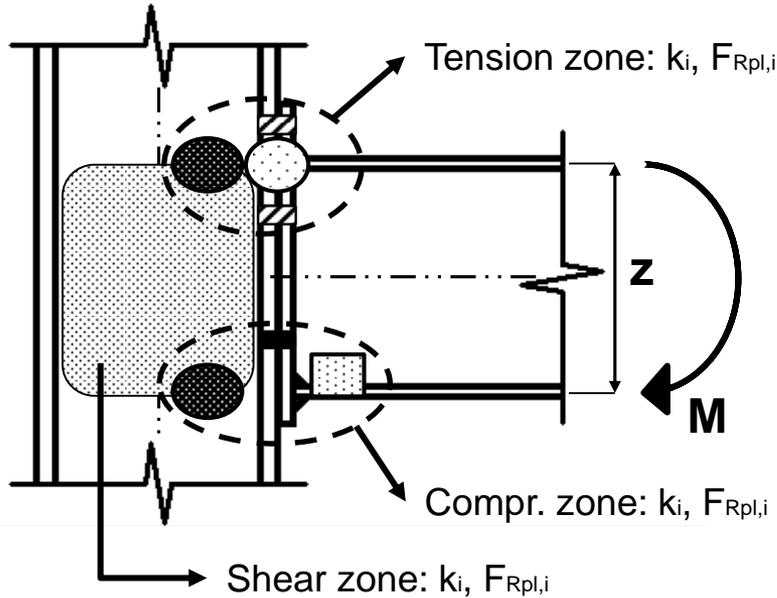

Problem: ductility assessment

→ Need for joint ductility:

- Design of a structure based on a plastic global analysis
- Mitigation of the risk of progressive collapse under exceptional loading
- Energy dissipation under earthquakes

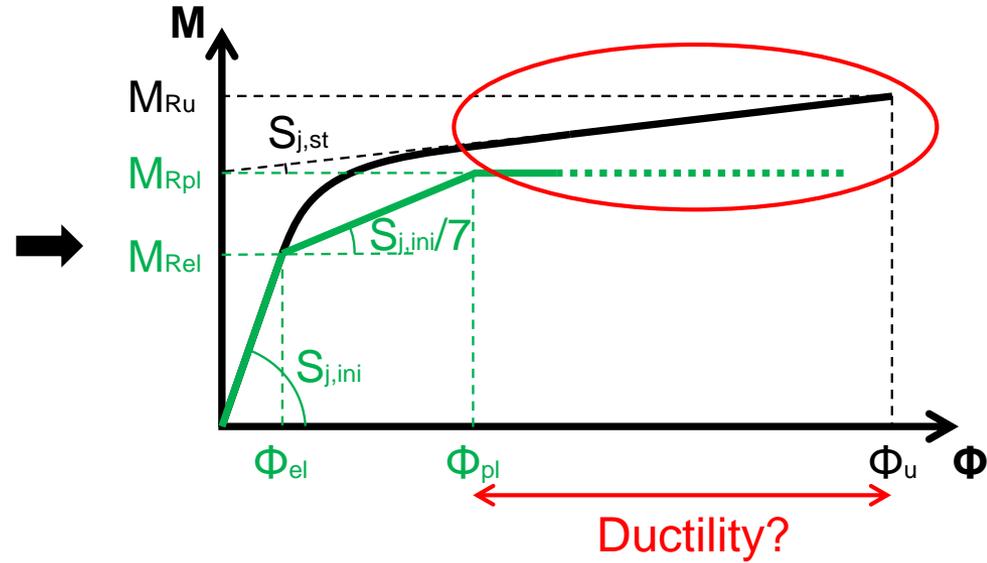

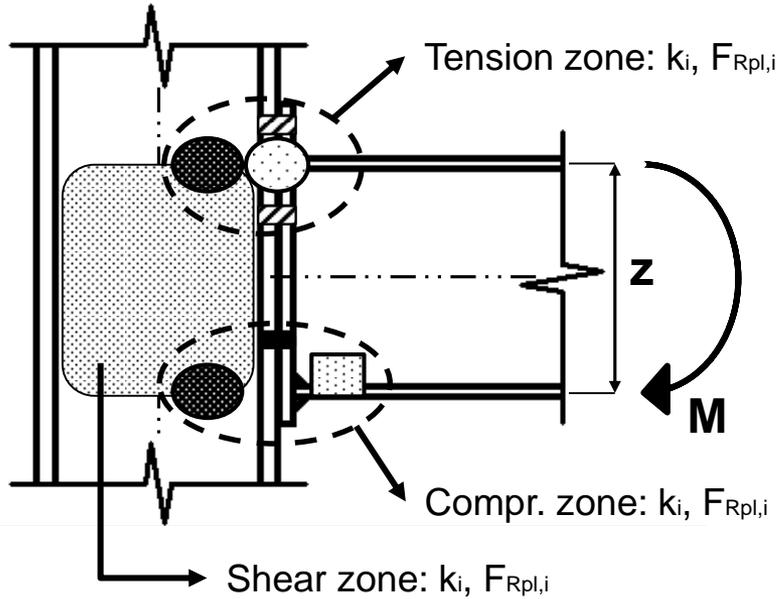

Problem: ductility assessment

→ Need for joint ductility:

- Design of a structure based on a plastic global analysis
- Mitigation of the risk of progressive collapse under exceptional loading
- Energy dissipation under earthquakes

Problem: ductility assessment

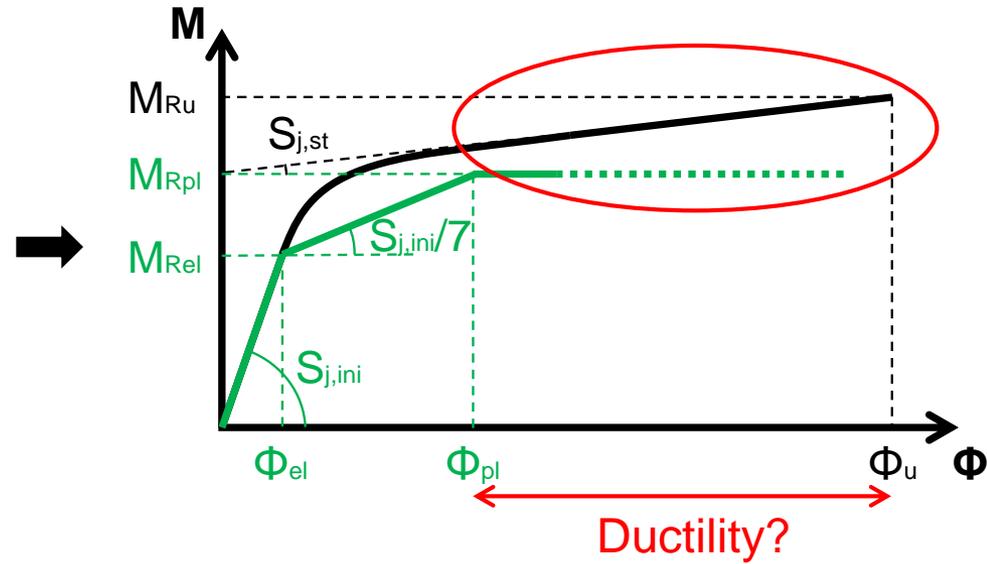

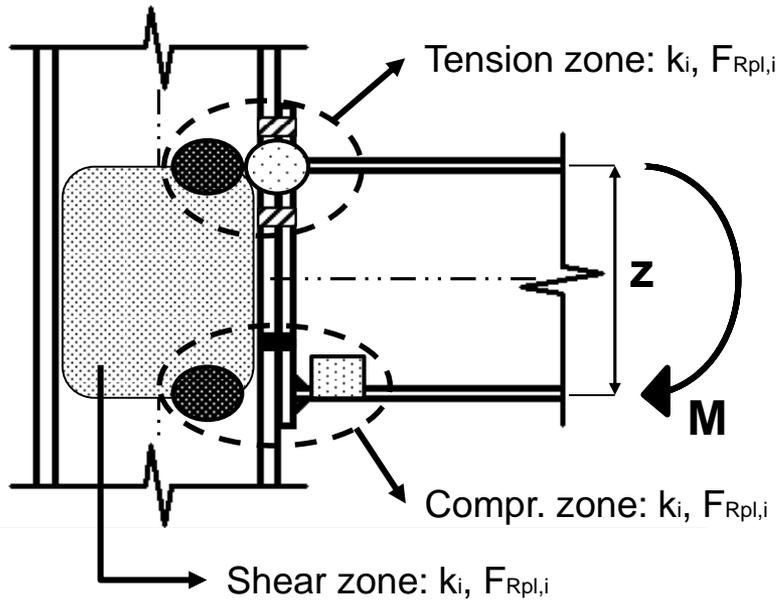

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

$$S_{j,ini} = \frac{Ez^2}{\sum_i 1/k_i}$$

$$M_{Rpl} = \min(F_{Rpl,i}) \cdot z$$

Problem: ductility assessment

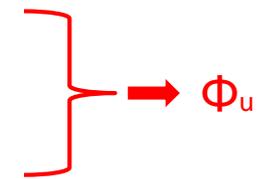

→ 4 key parameters

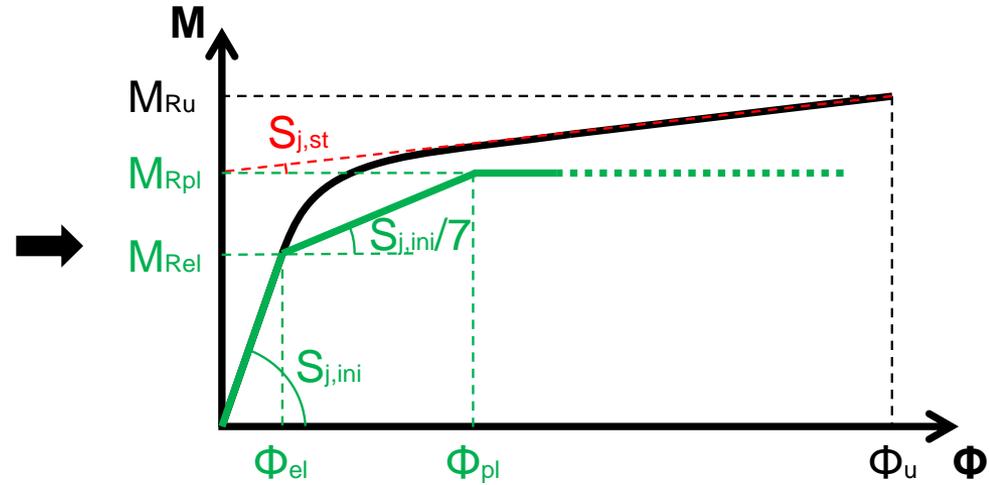

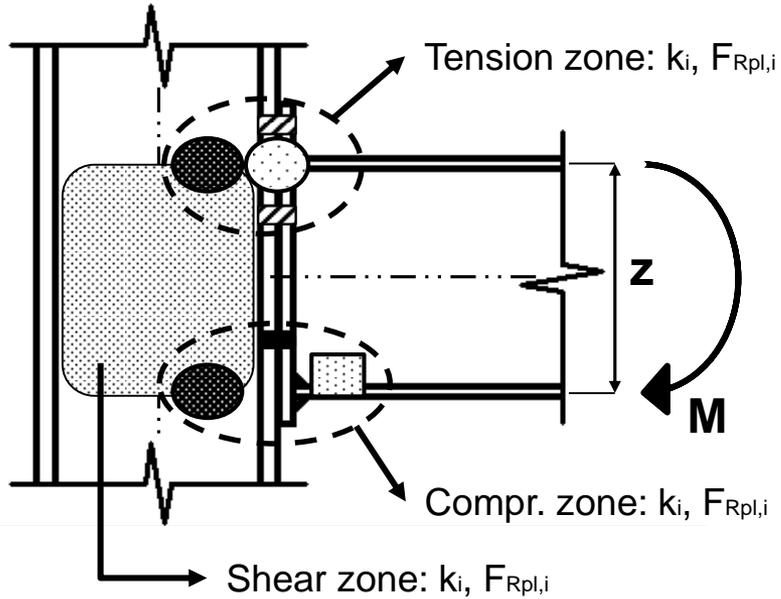

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

$$S_{j,ini} = \frac{Ez^2}{\sum_i 1/k_i}$$

$$M_{Rpl} = \min(F_{Rpl,i}) \cdot z$$

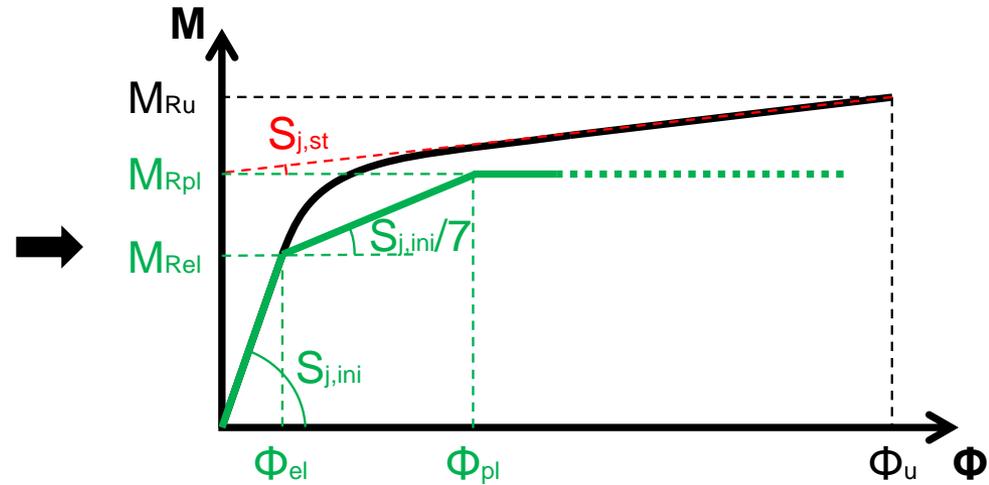

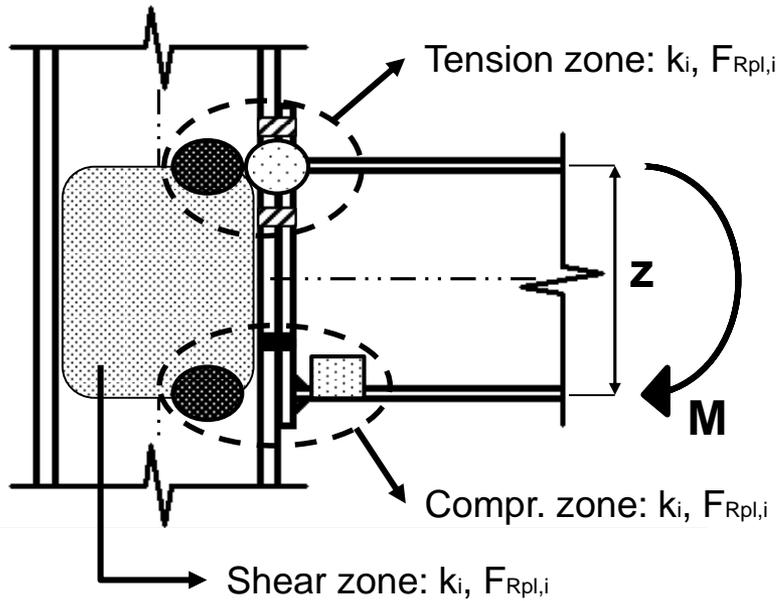

Estimation of $S_{j,st}$

$$S_{j,st} = \frac{Ez^2}{\sum \frac{1}{k^*}}$$

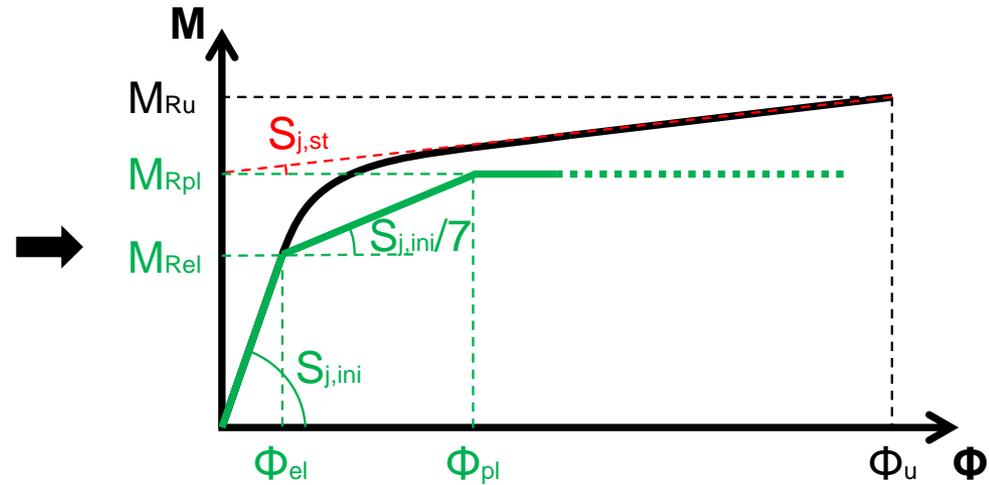

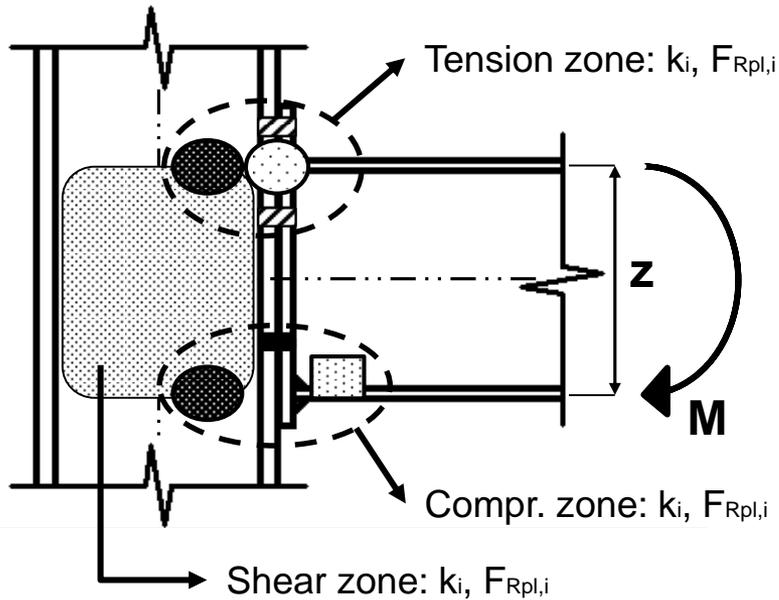

Estimation of $S_{j,st}$

$$S_{j,st} = \frac{Ez^2}{\sum \frac{1}{k^*}}$$

$$\sum \frac{1}{k^*} = \sum_m \left(\frac{1}{k_{i,m}} \right)_{M_{Rpl,m} > M_{Rpl,lim}} + \sum_p \left(\frac{1}{k_{st,p}} \right)_{M_{Rpl,p} \leq M_{Rpl,lim}}$$

Estimation of $S_{j,st}$

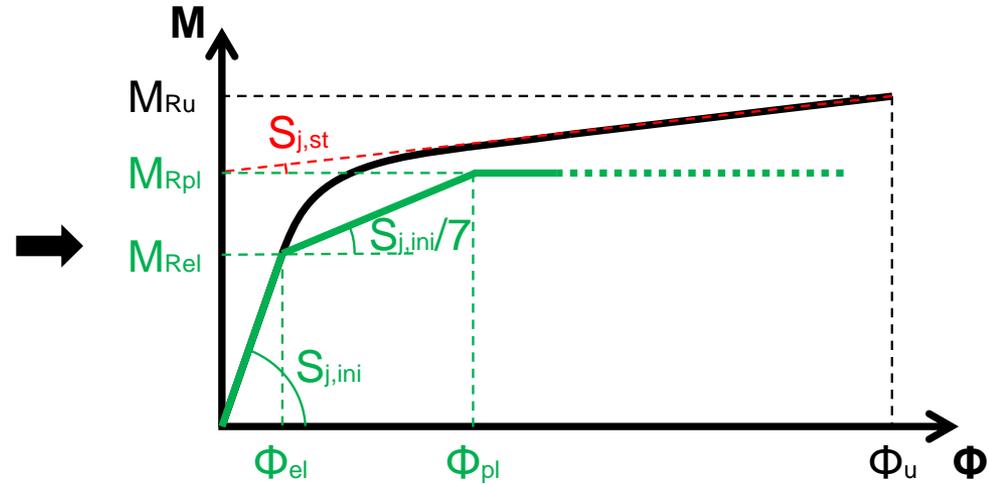

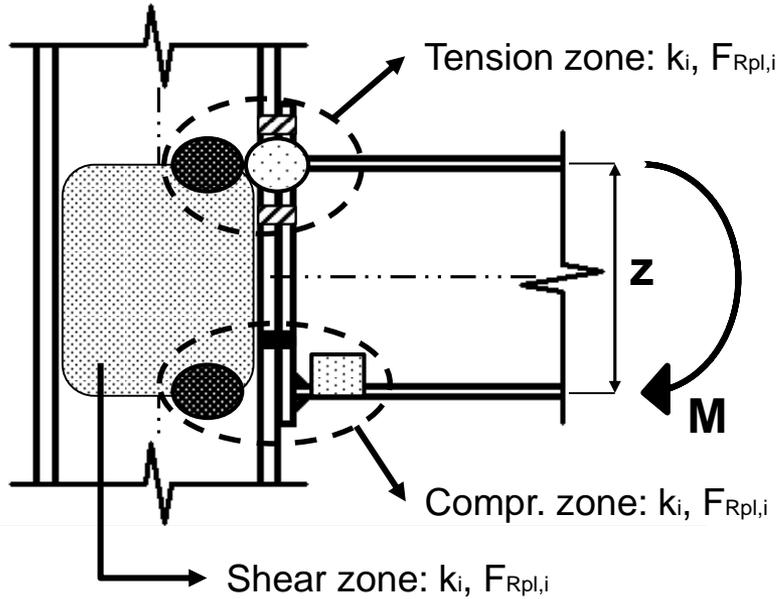

$$S_{j,st} = \frac{EZ^2}{\sum \frac{1}{k^*}}$$

$$\sum \frac{1}{k^*} = \underbrace{\sum_m \left(\frac{1}{k_{i,m}} \right)_{M_{Rpl,m} > M_{Rpl,lim}}}_{\text{Elastic components}} + \sum_p \left(\frac{1}{k_{st,p}} \right)_{M_{Rpl,p} \leq M_{Rpl,lim}}$$

Elastic components

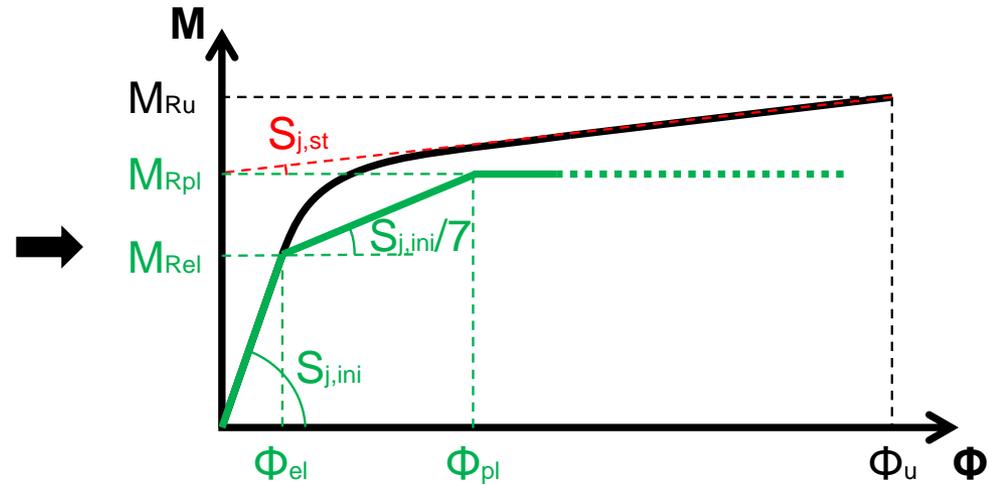

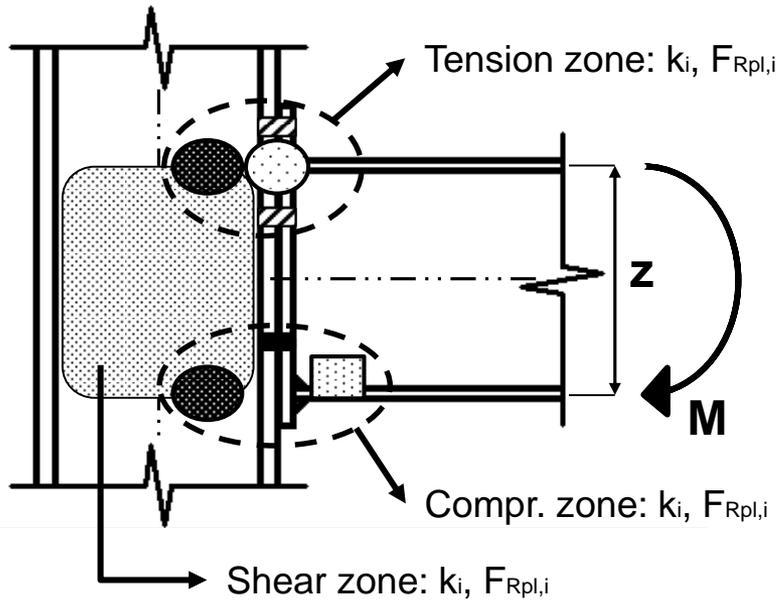

Estimation of $S_{j,st}$

$$S_{j,st} = \frac{EZ^2}{\sum \frac{1}{k^*}}$$

$$\sum \frac{1}{k^*} = \underbrace{\sum_m \left(\frac{1}{k_{i,m}} \right)_{M_{Rpl,m} > M_{Rpl,lim}}}_{\text{Elastic components}} + \underbrace{\sum_p \left(\frac{1}{k_{st,p}} \right)_{M_{Rpl,p} \leq M_{Rpl,lim}}}_{\text{Yielded components}}$$

Estimation of $S_{j,st}$

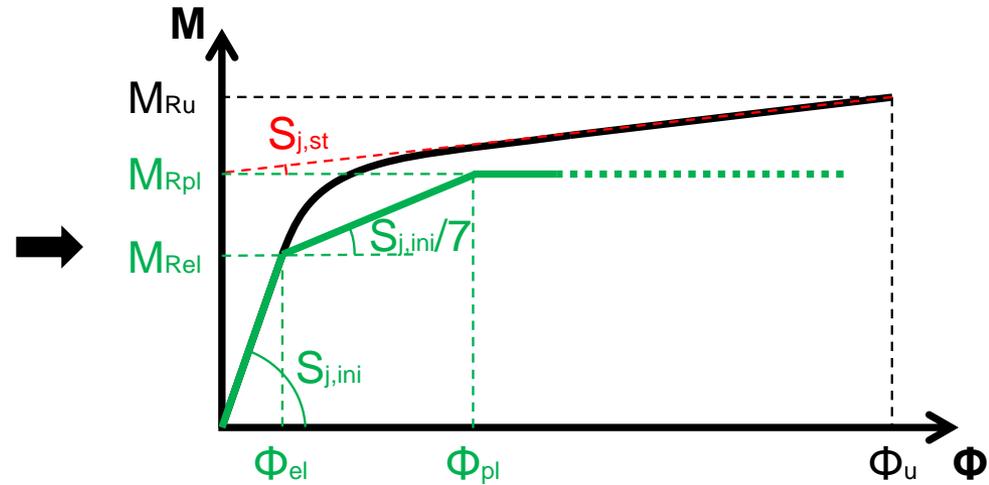

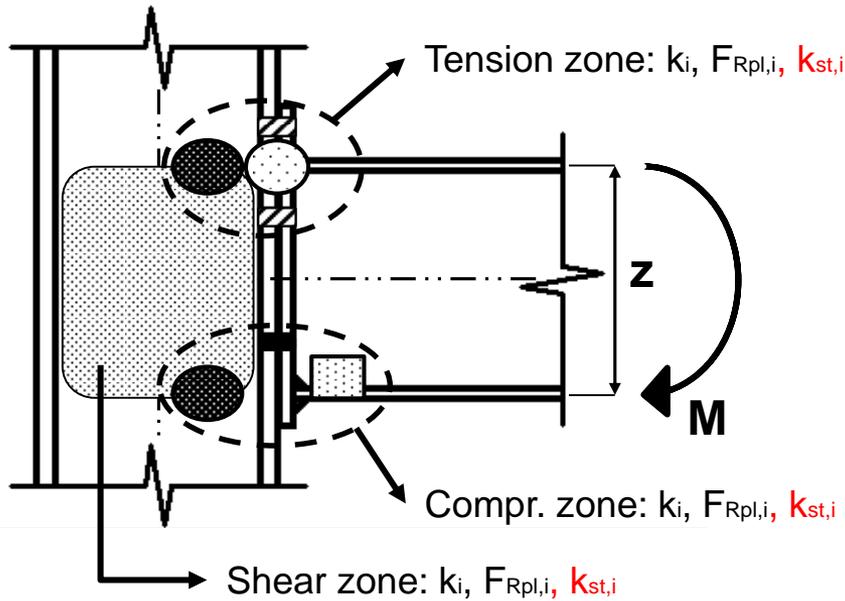

$$S_{j,st} = \frac{Ez^2}{\sum \frac{1}{k^*}}$$

$$\sum \frac{1}{k^*} = \sum_m \left(\frac{1}{k_{i,m}} \right)_{M_{Rpl,m} > M_{Rpl,lim}} + \sum_p \left(\frac{1}{k_{st,p}} \right)_{M_{Rpl,p} \leq M_{Rpl,lim}}$$

$$M_{Rpl,lim} = 1,65M_{Rpl}$$

Estimation of $S_{j,st}$

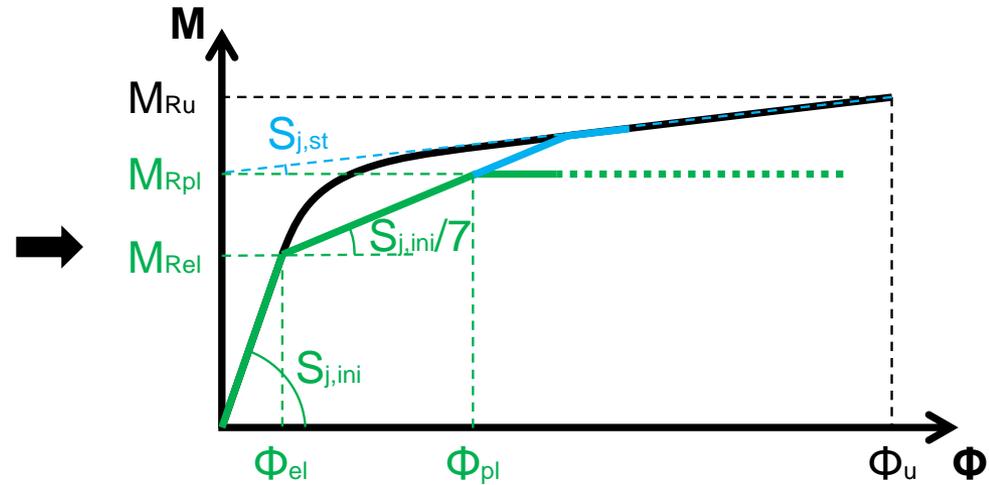

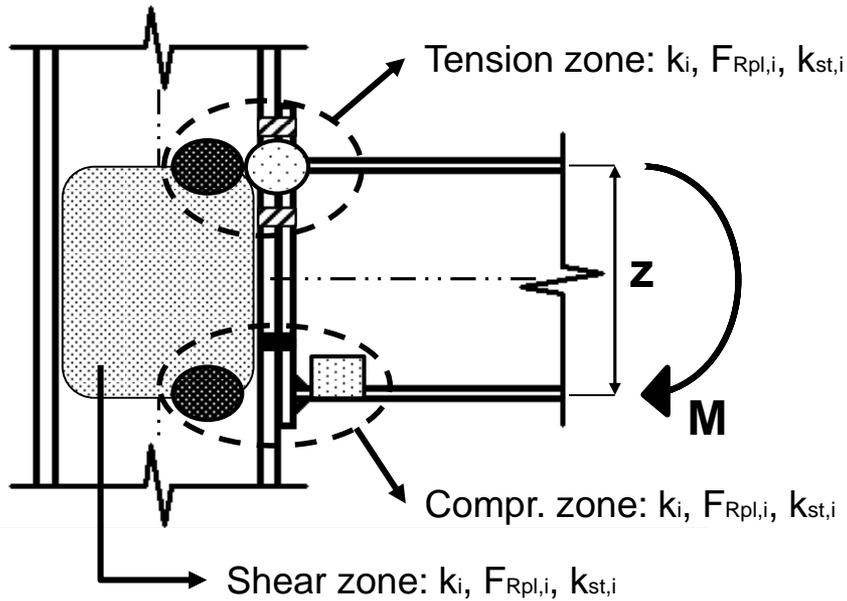

$$S_{j,st} = \frac{Ez^2}{\sum \frac{1}{k^*}}$$

$$\sum \frac{1}{k^*} = \sum_m \left(\frac{1}{k_{i,m}} \right)_{M_{Rpl,m} > M_{Rpl,lim}} + \sum_p \left(\frac{1}{k_{st,p}} \right)_{M_{Rpl,p} \leq M_{Rpl,lim}}$$

$$k_{st} = \begin{cases} \frac{E_{st}}{E} k_i & \rightarrow \text{components in tension/compression} \\ \frac{2(1+\nu) E_{st}}{3} \frac{k_i}{E} & \rightarrow \text{column web panel in shear} \end{cases}$$

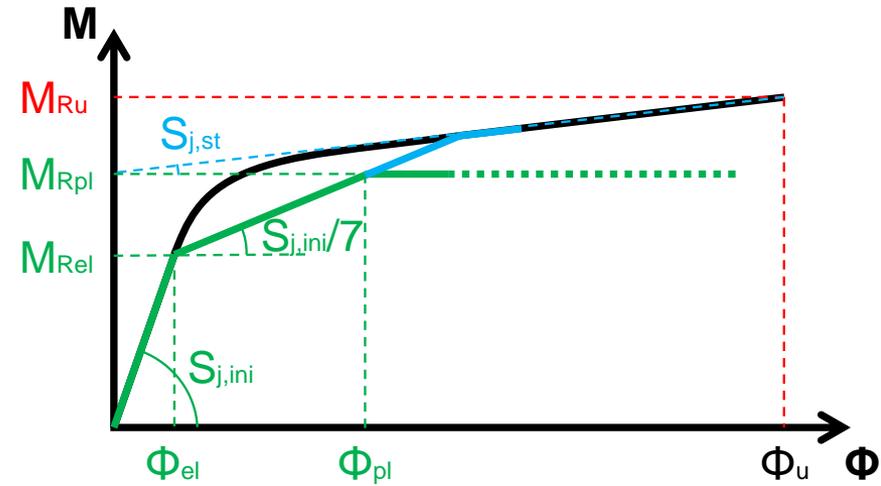

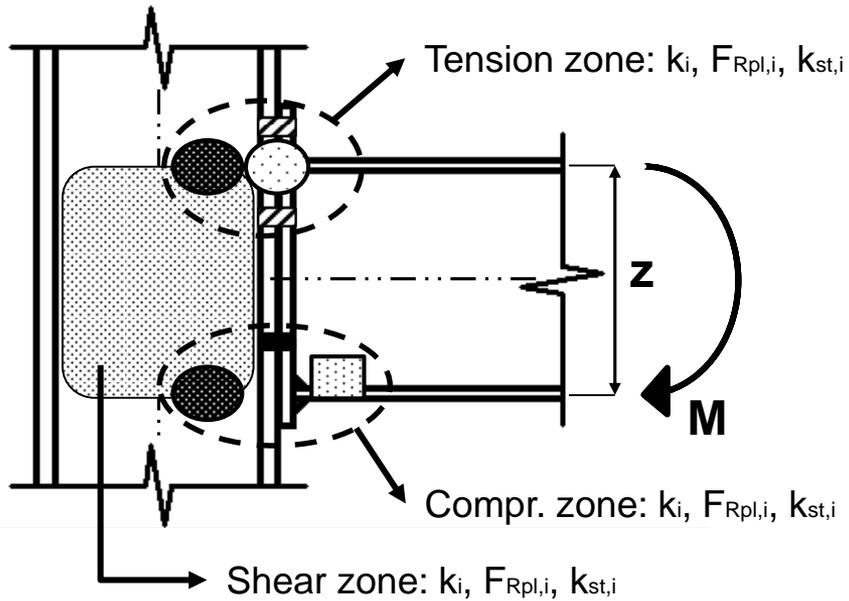

Estimation of $S_{j,st}$

$$S_{j,st} = \frac{Ez^2}{\sum \frac{1}{k^*}}$$

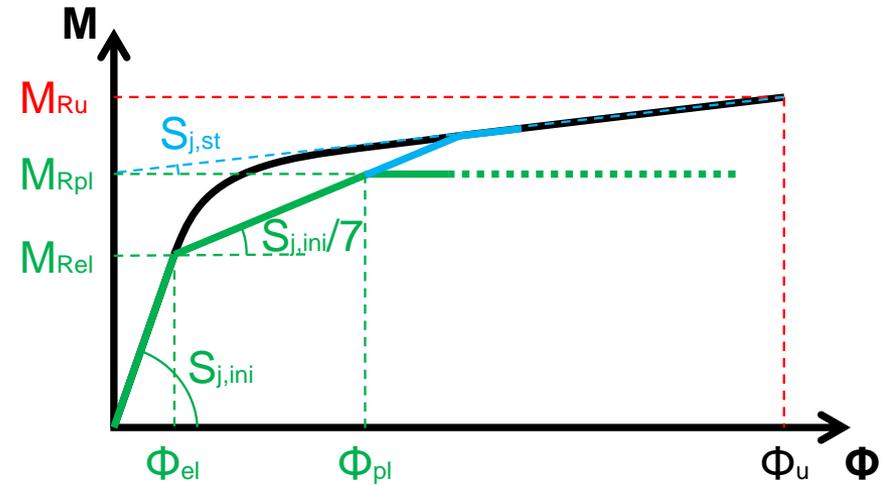

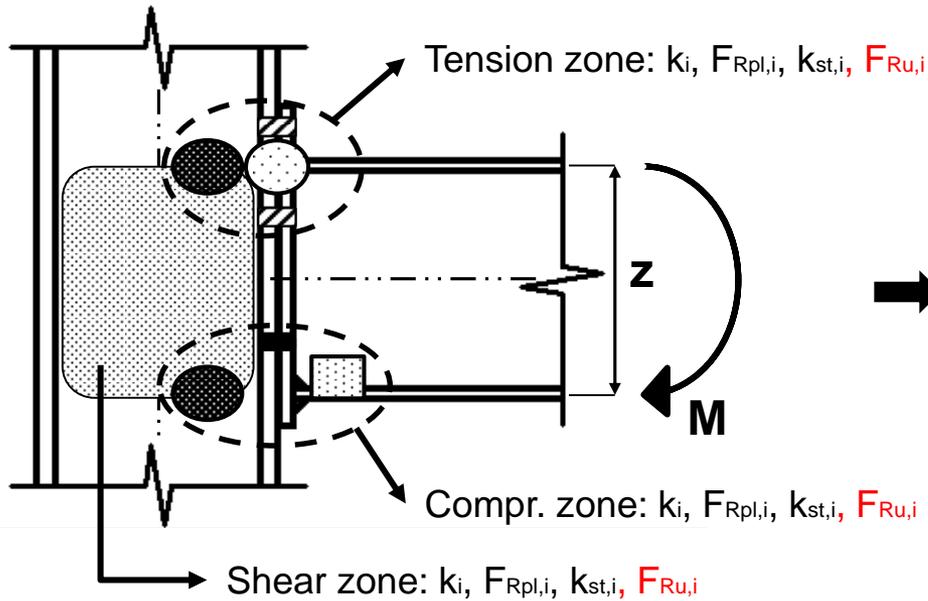

$$\sum \frac{1}{k^*} = \sum_m \left(\frac{1}{k_{i,m}} \right)_{M_{Rpl,m} > M_{Rpl,lim}} + \sum_p \left(\frac{1}{k_{st,p}} \right)_{M_{Rpl,p} \leq M_{Rpl,lim}}$$

Estimation of M_{Ru}

$$M_{Ru} = \min(F_{Ru,i}) \cdot z$$

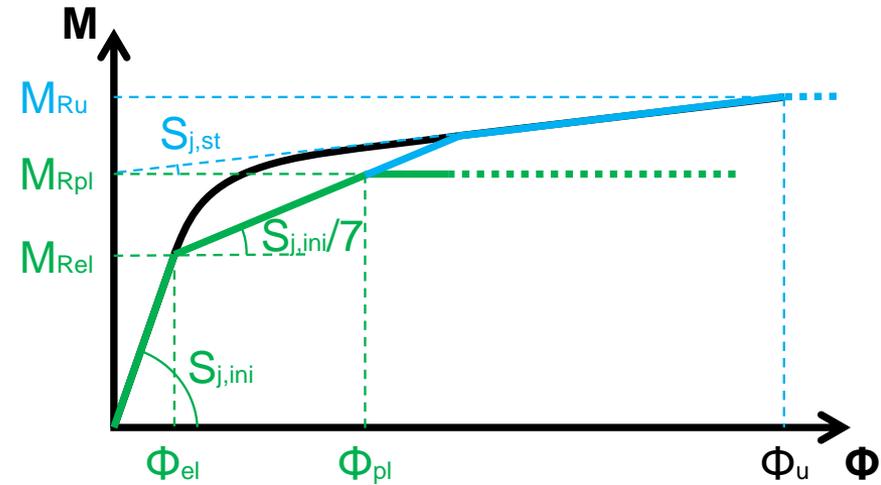

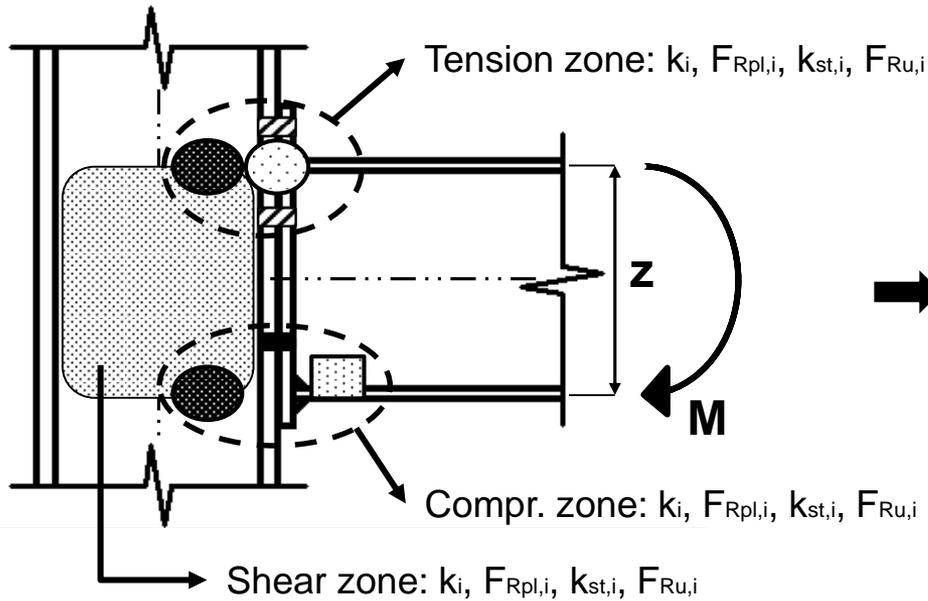

Estimation of M_{Ru}

$$M_{Ru} = \min(F_{Ru,i}) \cdot z$$

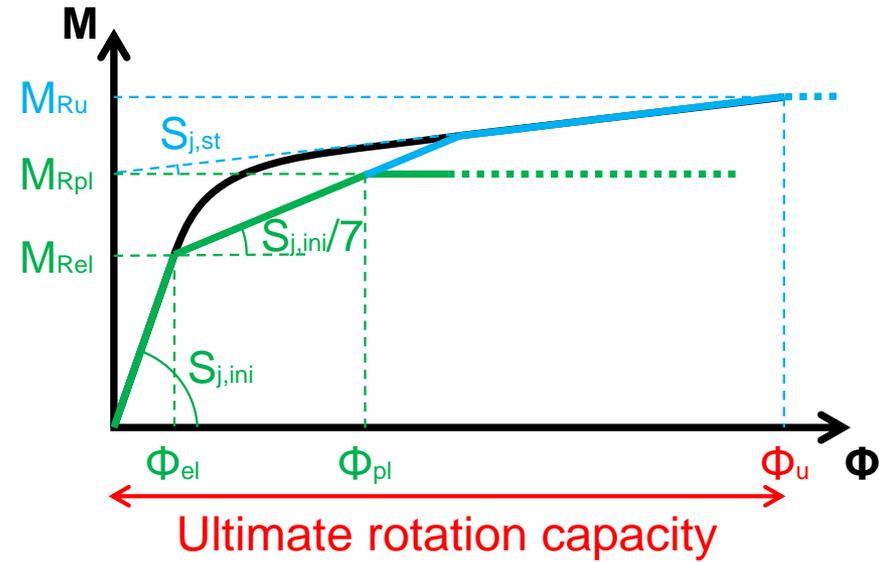

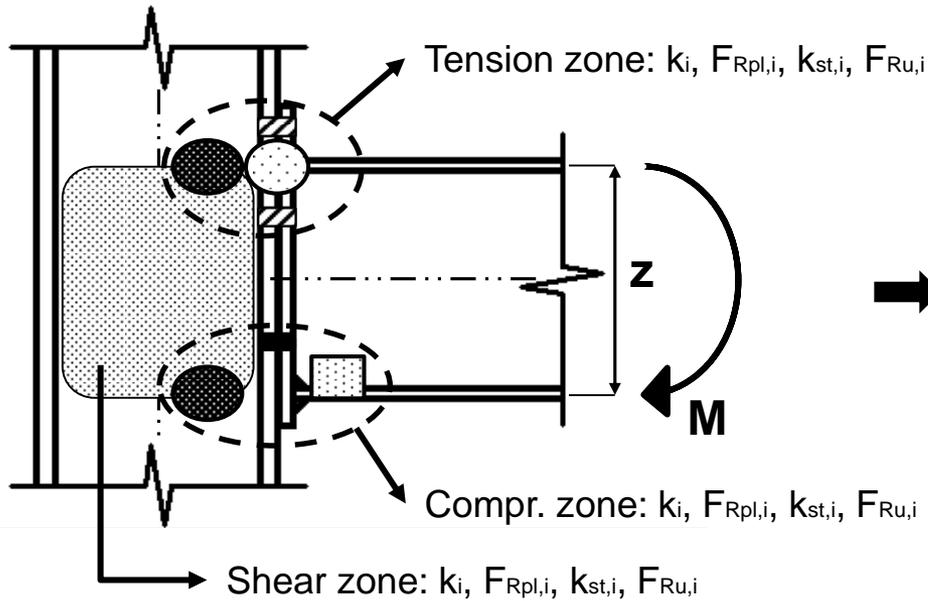

$$F_{Rpl,i} (f_y) \leftrightarrow F_{Ru,i} (f_u)$$

Estimation of M_{Ru}

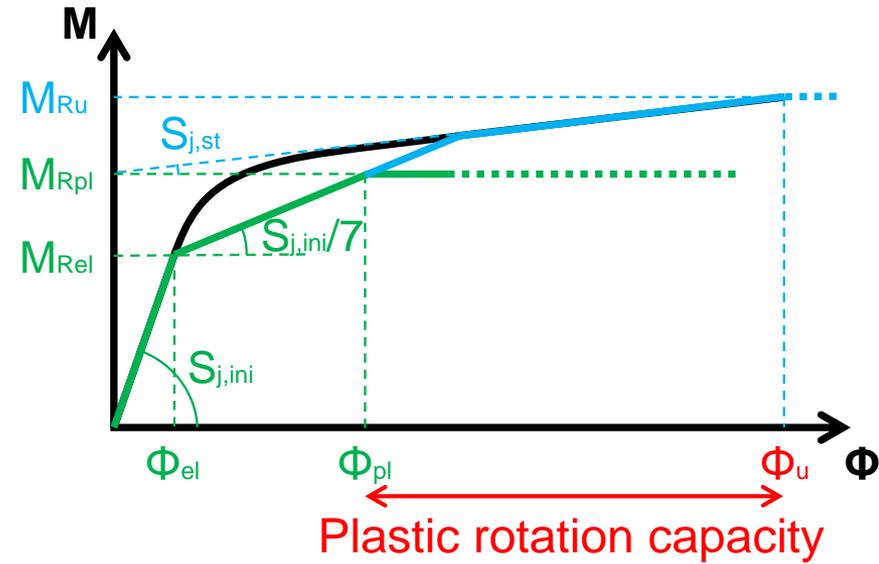

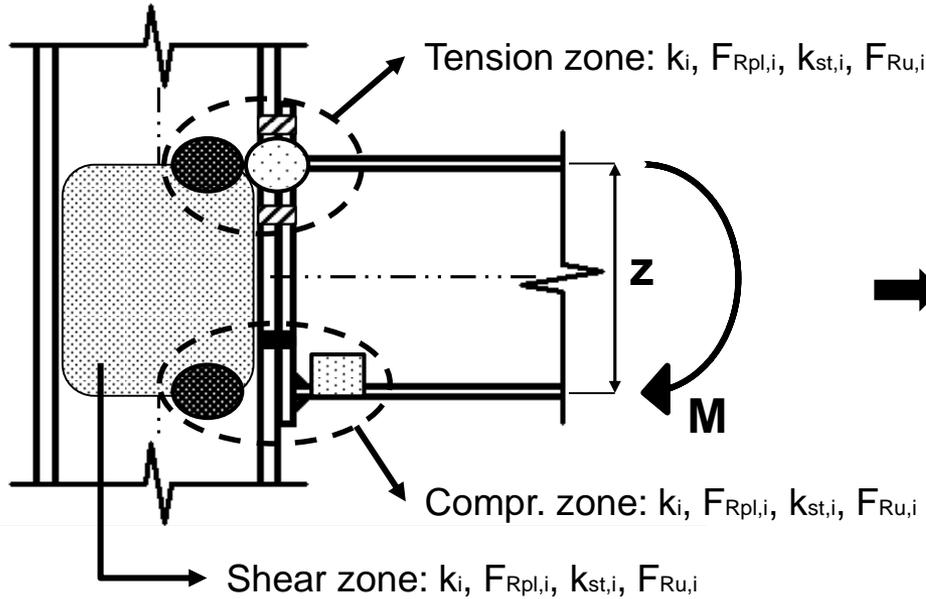

$$M_{Ru} = \min(F_{Ru,i}) \cdot z$$

Estimation of ductility

$$\Phi_u = \frac{M_{Ru} - M_{Rpl}}{S_{j,st}}$$

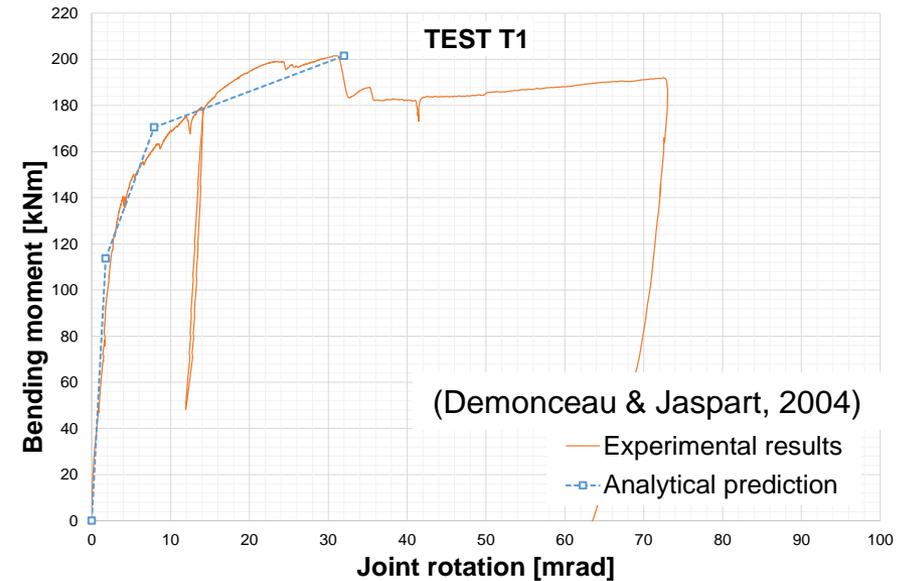

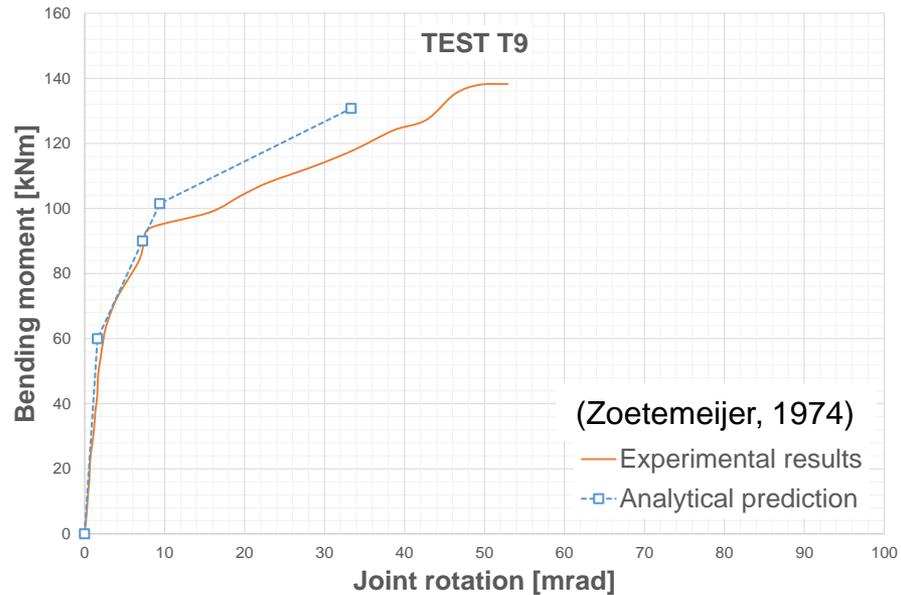

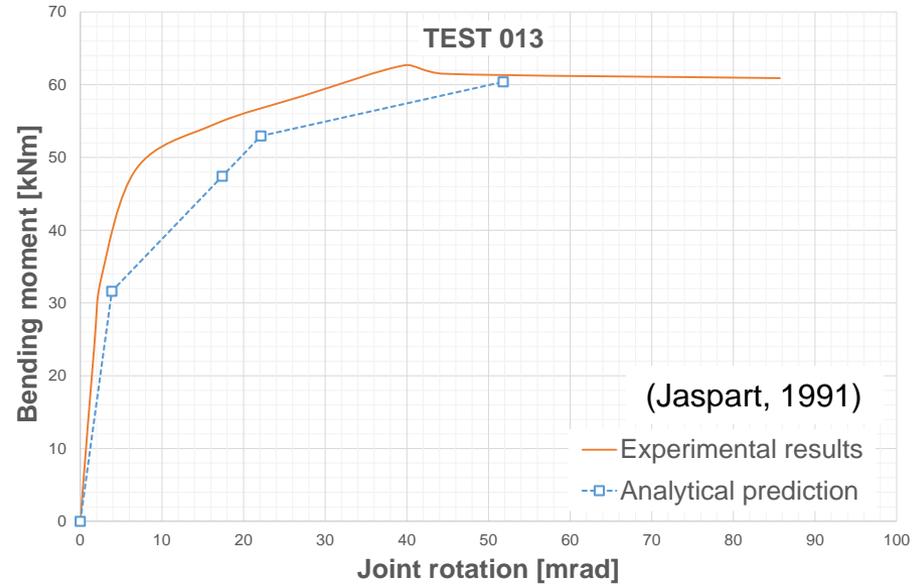

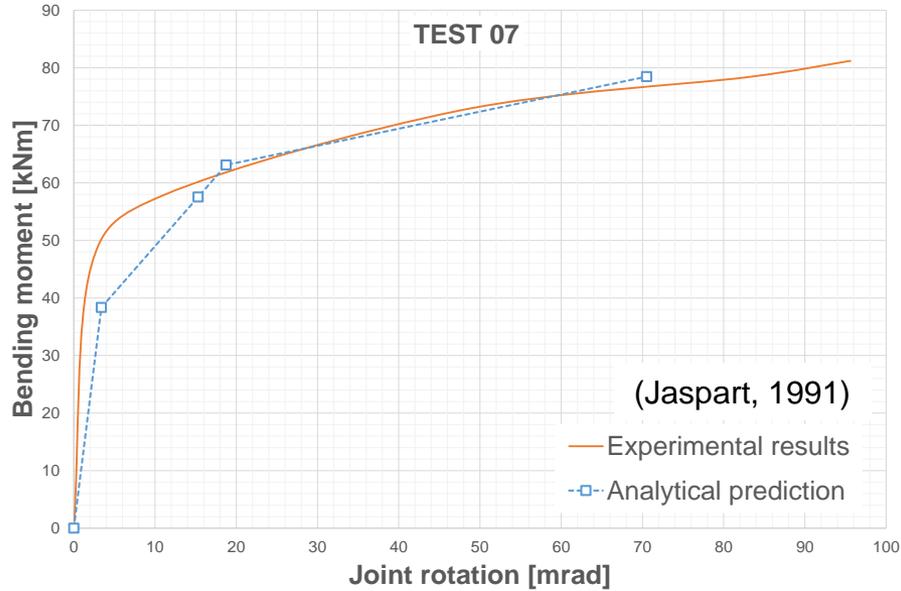

Estimation of ductility

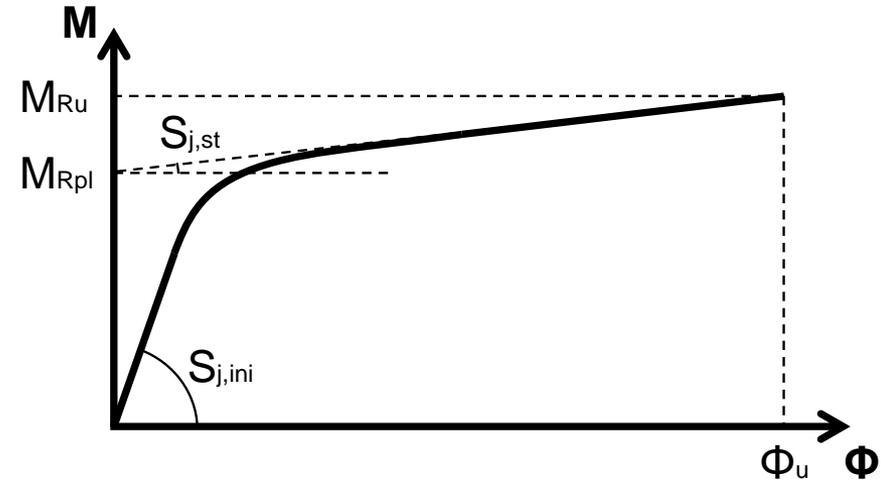

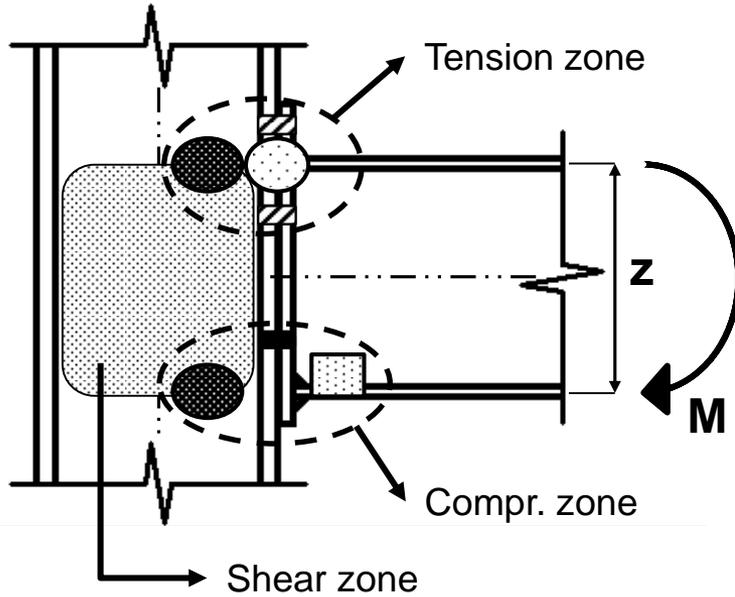

$$\Phi_u = \frac{M_{Ru} - M_{Rpl}}{S_{j,st}}$$

$$\Phi_u - \Phi_{pl} = \left(\frac{M_{Ru} - M_{Rpl}}{S_{j,st}} \right) - \left(\frac{M_{Rpl}}{S_{j,ini}/3} \right)$$

Validation

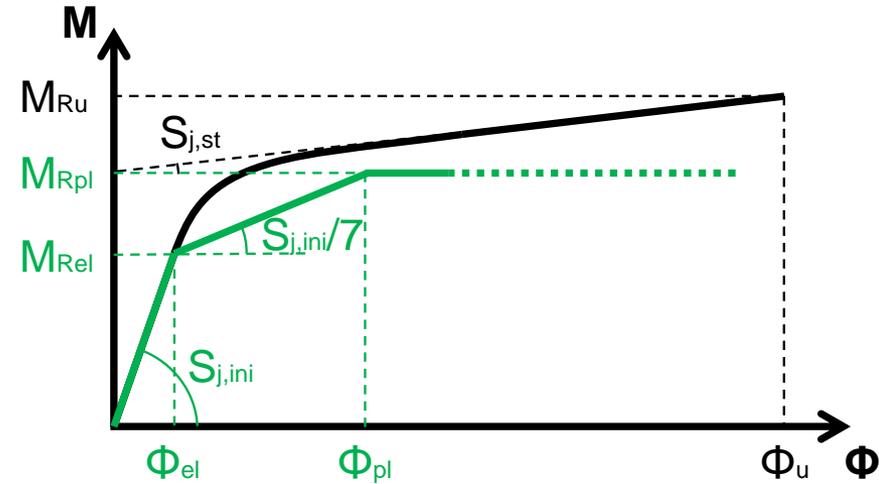

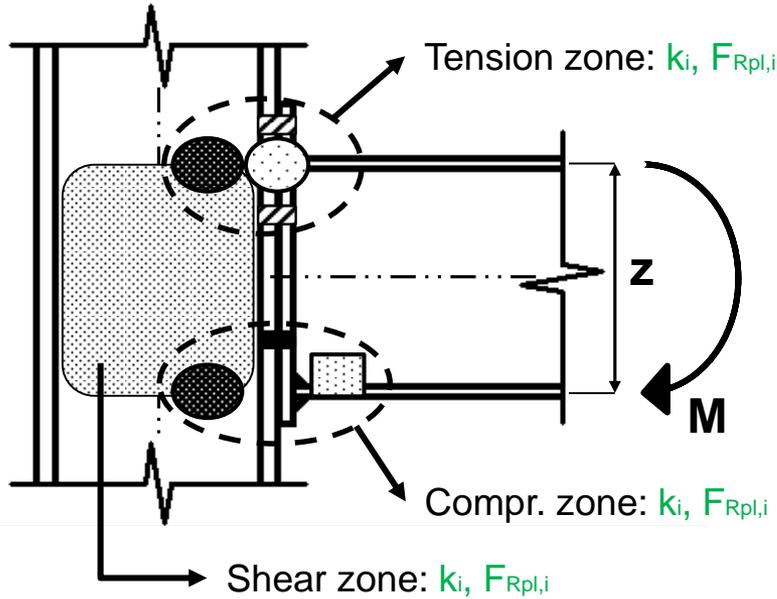

Conclusions

→ 4 key parameters

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

Conclusions

→ 4 key parameters

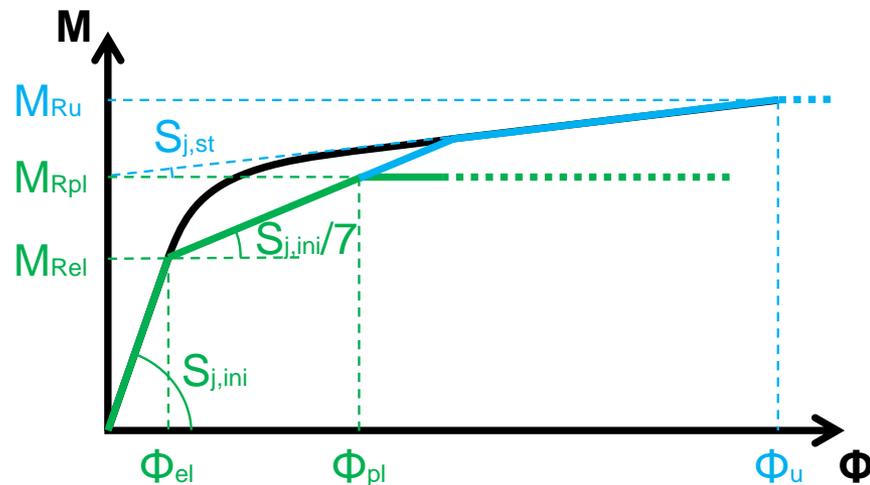

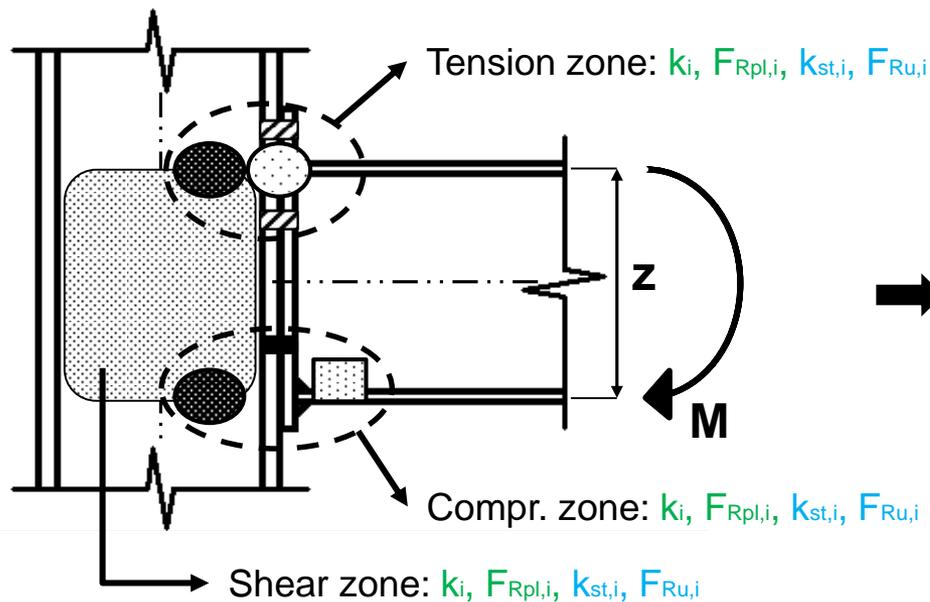

- Initial stiffness
- Plastic bending resistance
- Post-plastic stiffness
- Ultimate bending resistance

$$S_{j,ini} = \frac{Ez^2}{\sum_i 1/k_i}$$

$$M_{Rpl} = \min(F_{Rpl,i}) \cdot z$$

Conclusions

- Eurocode 3, Part 1-8
- Present paper

→ 4 key parameters

- Initial stiffness

$$S_{j,ini} = \frac{Ez^2}{\sum_i 1/k_i}$$

- Plastic bending resistance

$$M_{RpI} = \min(F_{RpI,i}) \cdot z$$

- Post-plastic stiffness

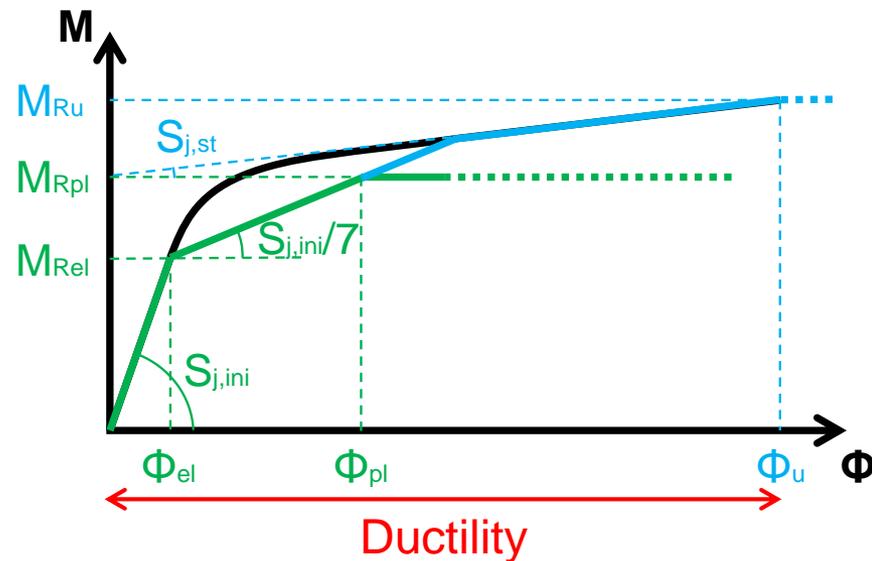

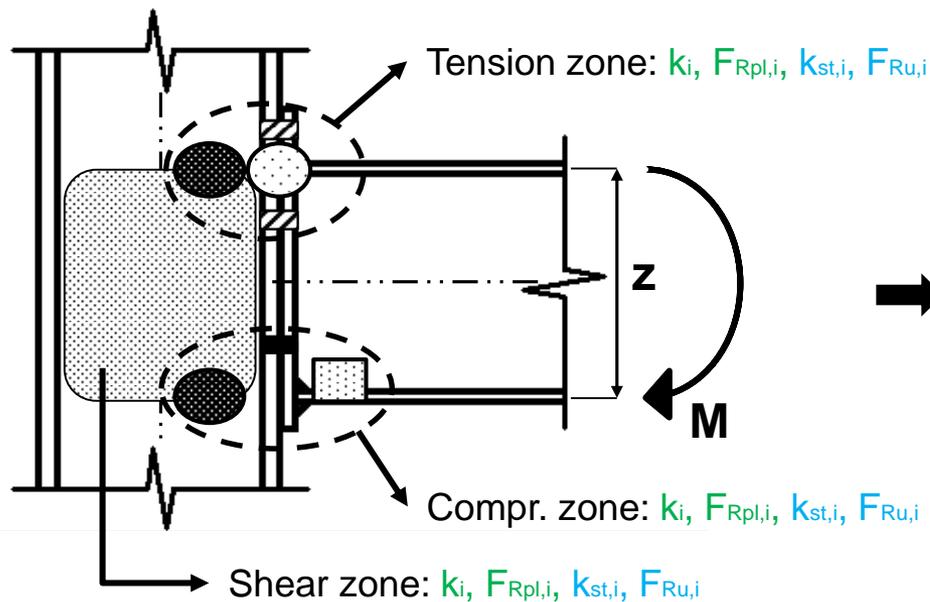

$$S_{j,st} = \frac{Ez^2}{\sum_i 1/k^*}$$

- Ultimate bending resistance

$$M_{Ru} = \min(F_{Ru,i}) \cdot z$$

Conclusions

- Eurocode 3, Part 1-8
- Present paper

→ 4 key parameters

• Initial stiffness

$$S_{j,ini} = \frac{Ez^2}{\sum_i 1/k_i}$$

• Plastic bending resistance

$$M_{Rpl} = \min(F_{Rpl,i}) \cdot z$$

• Post-plastic stiffness

$$S_{j,st} = \frac{Ez^2}{\sum_i 1/k^*}$$

• Ultimate bending resistance

$$M_{Ru} = \min(F_{Ru,i}) \cdot z$$

→ Ultimate rotation capacity: $\Phi_u = \frac{M_{Ru} - M_{Rpl}}{S_{j,st}}$
