

# **Atmospheric CO<sub>2</sub> exchanges over the European Continental Shelf**

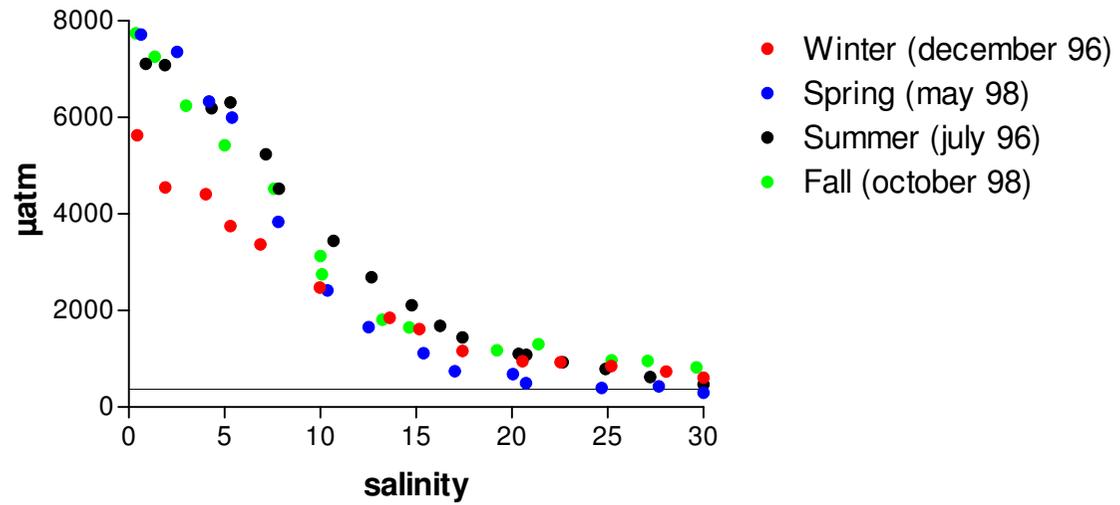

**Alberto Borges & Michel Frankignoulle**

**University of Liège  
Chemical Oceanography Unit  
<http://www.ulg.ac.be/oceanbio/co2>**

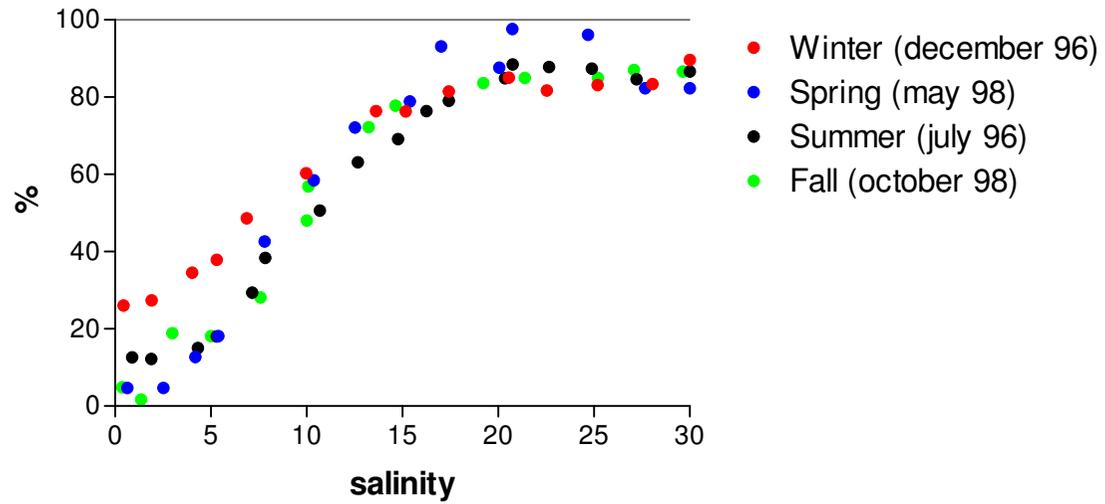

### pCO<sub>2</sub> in the Scheldt estuary Biogest cruises

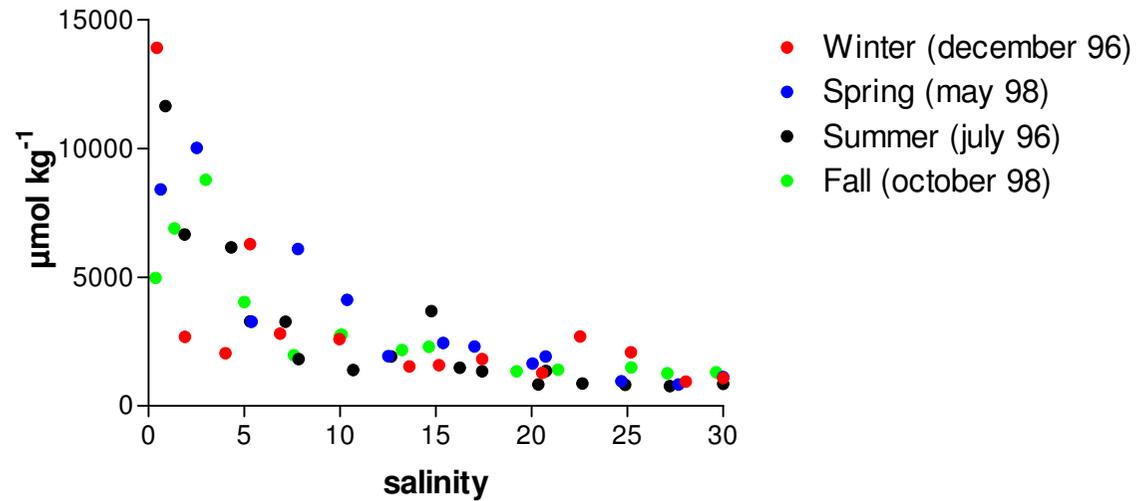

### O<sub>2</sub> saturation level in the Scheldt estuary Biogest cruises

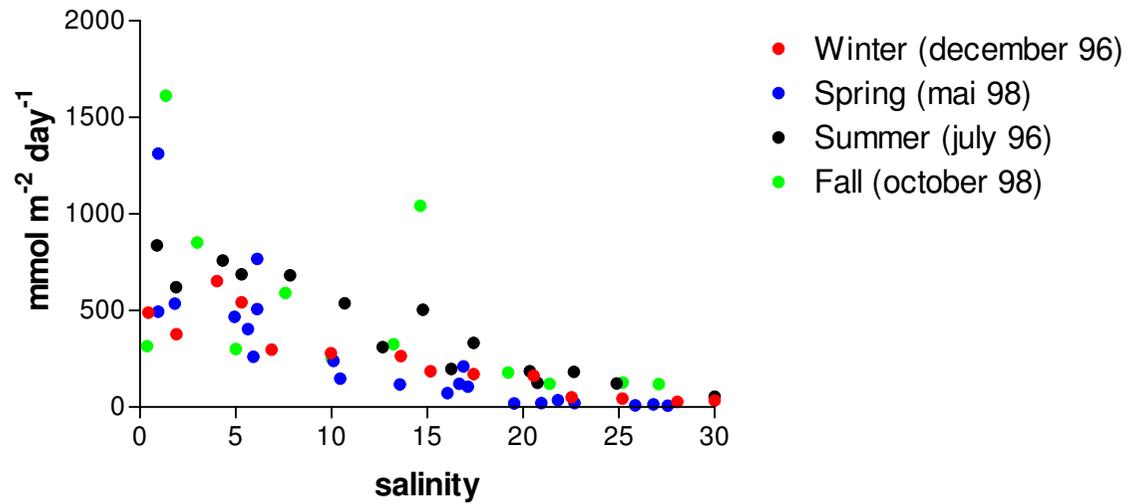

### Total organic carbon in the Scheldt estuary Biogest cruises

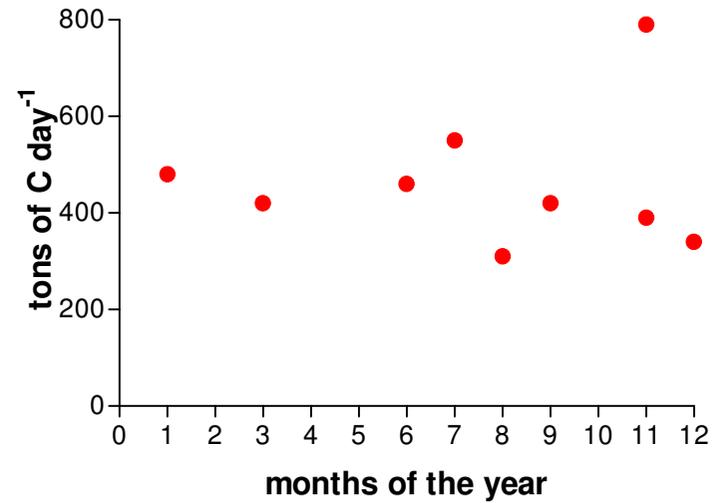

### CO<sub>2</sub> atmospheric fluxes in the Scheldt estuary Biogest cruises

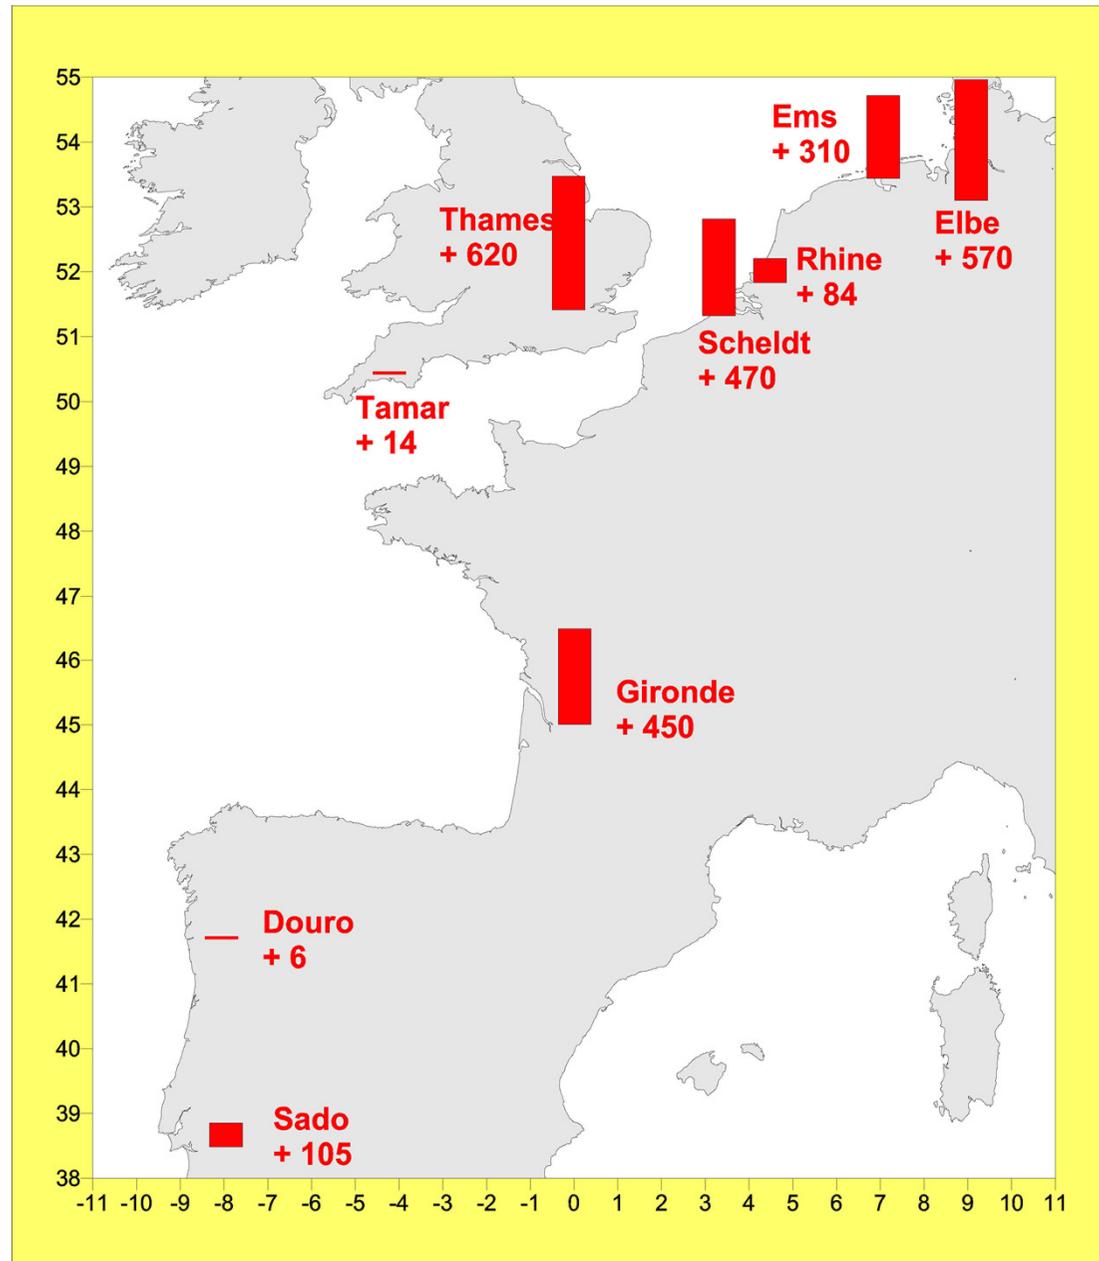

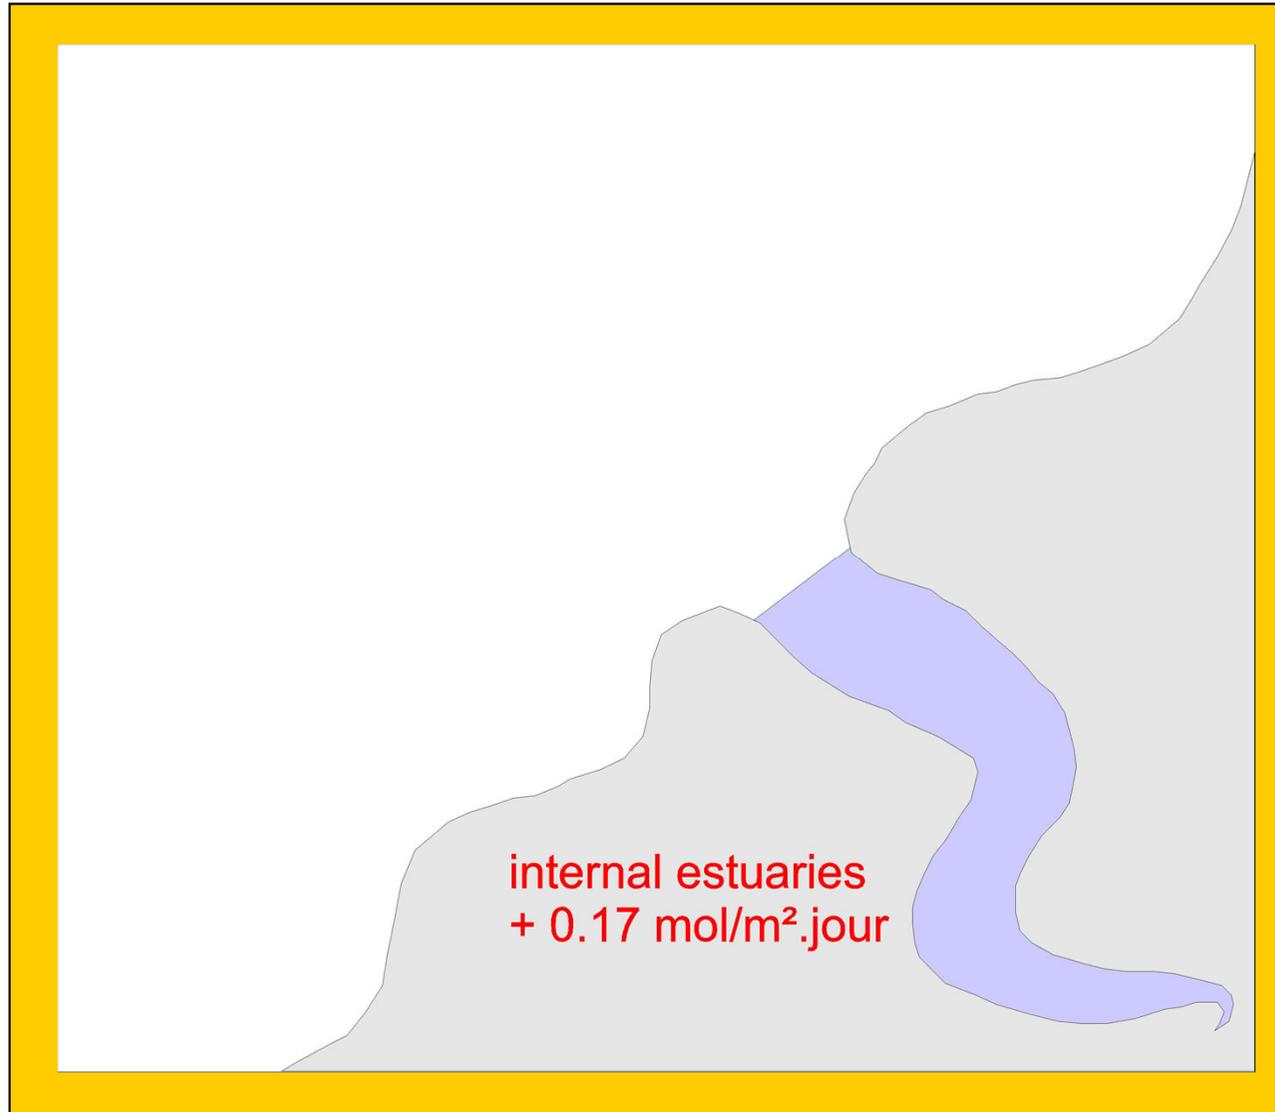

**net emission of CO<sub>2</sub>  
from the Scheldt estuary  
historical data-set**

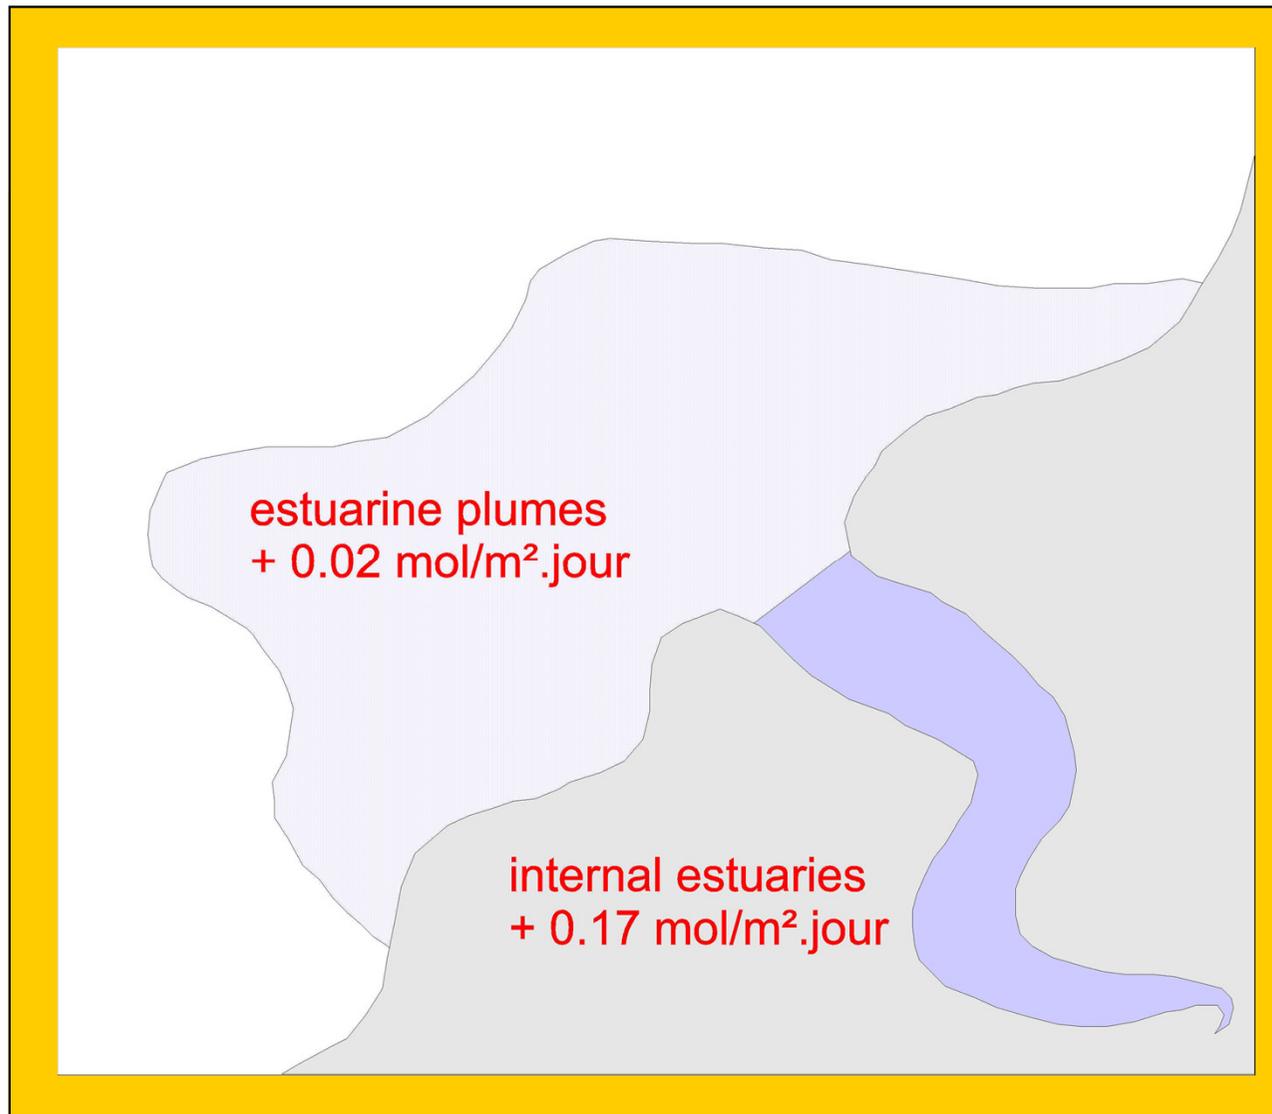

**470 tons of C per day**

# CO<sub>2</sub> emission by the Biogest estuaries tons of C per day

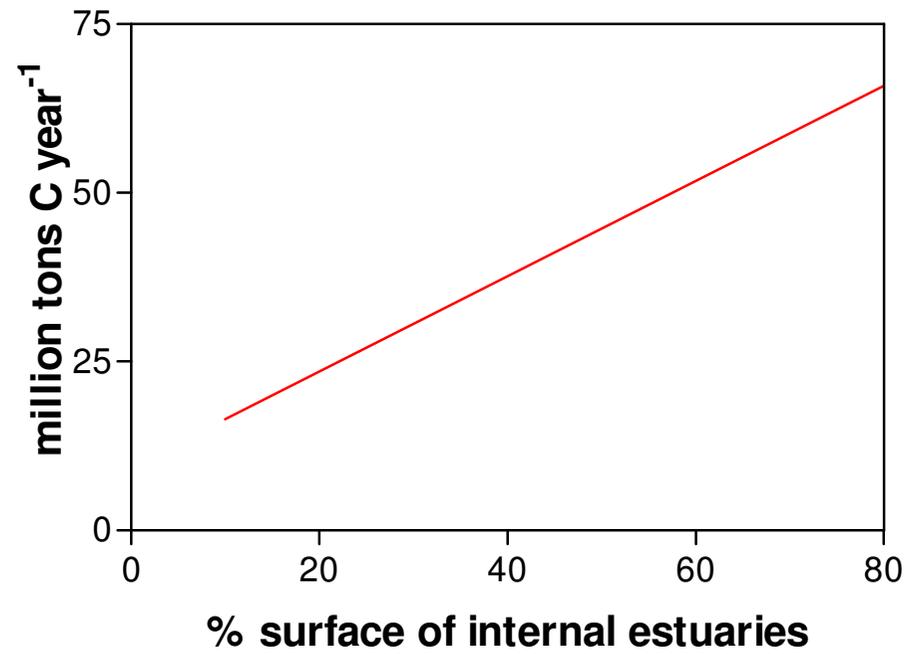

**Surface area in Europe of salinity <math>< 34</math>  
111 200 km<sup>2</sup>**

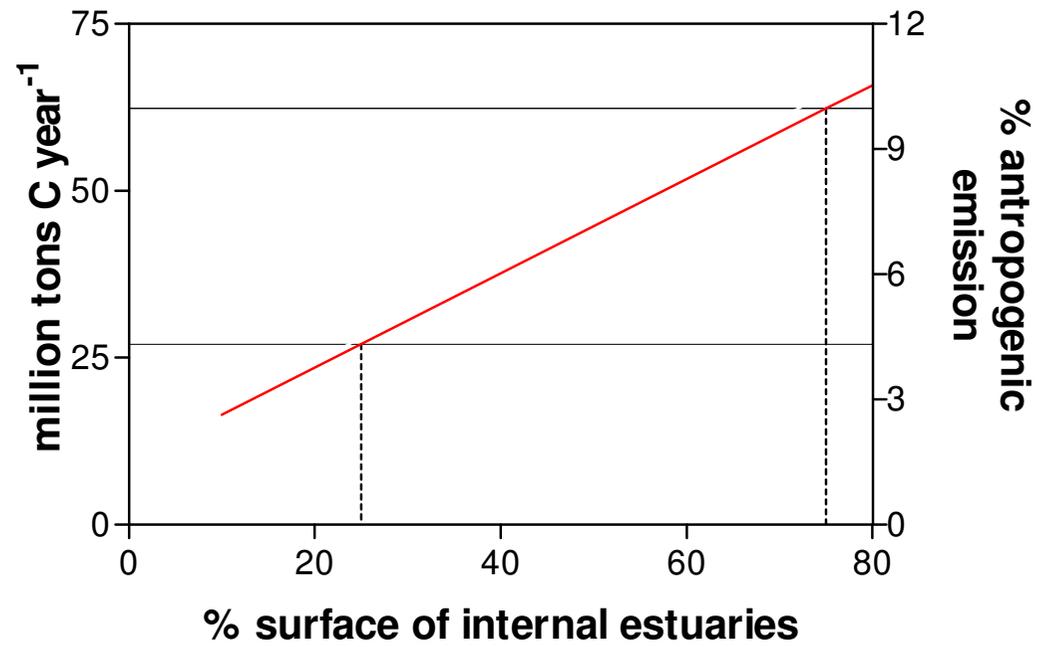

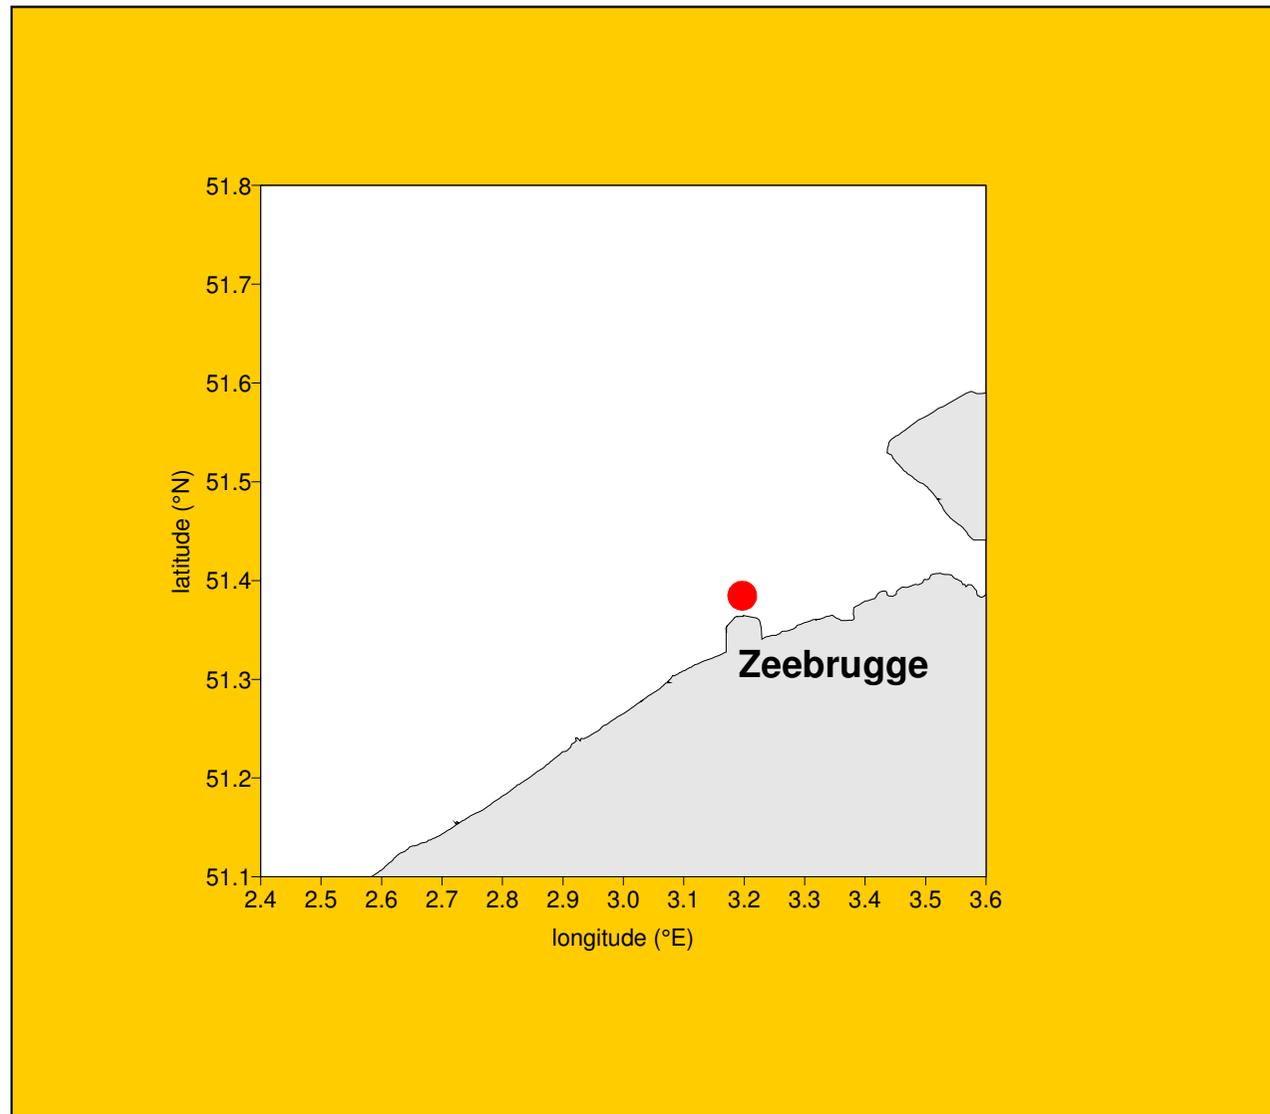

## emission of CO<sub>2</sub> by European estuaries

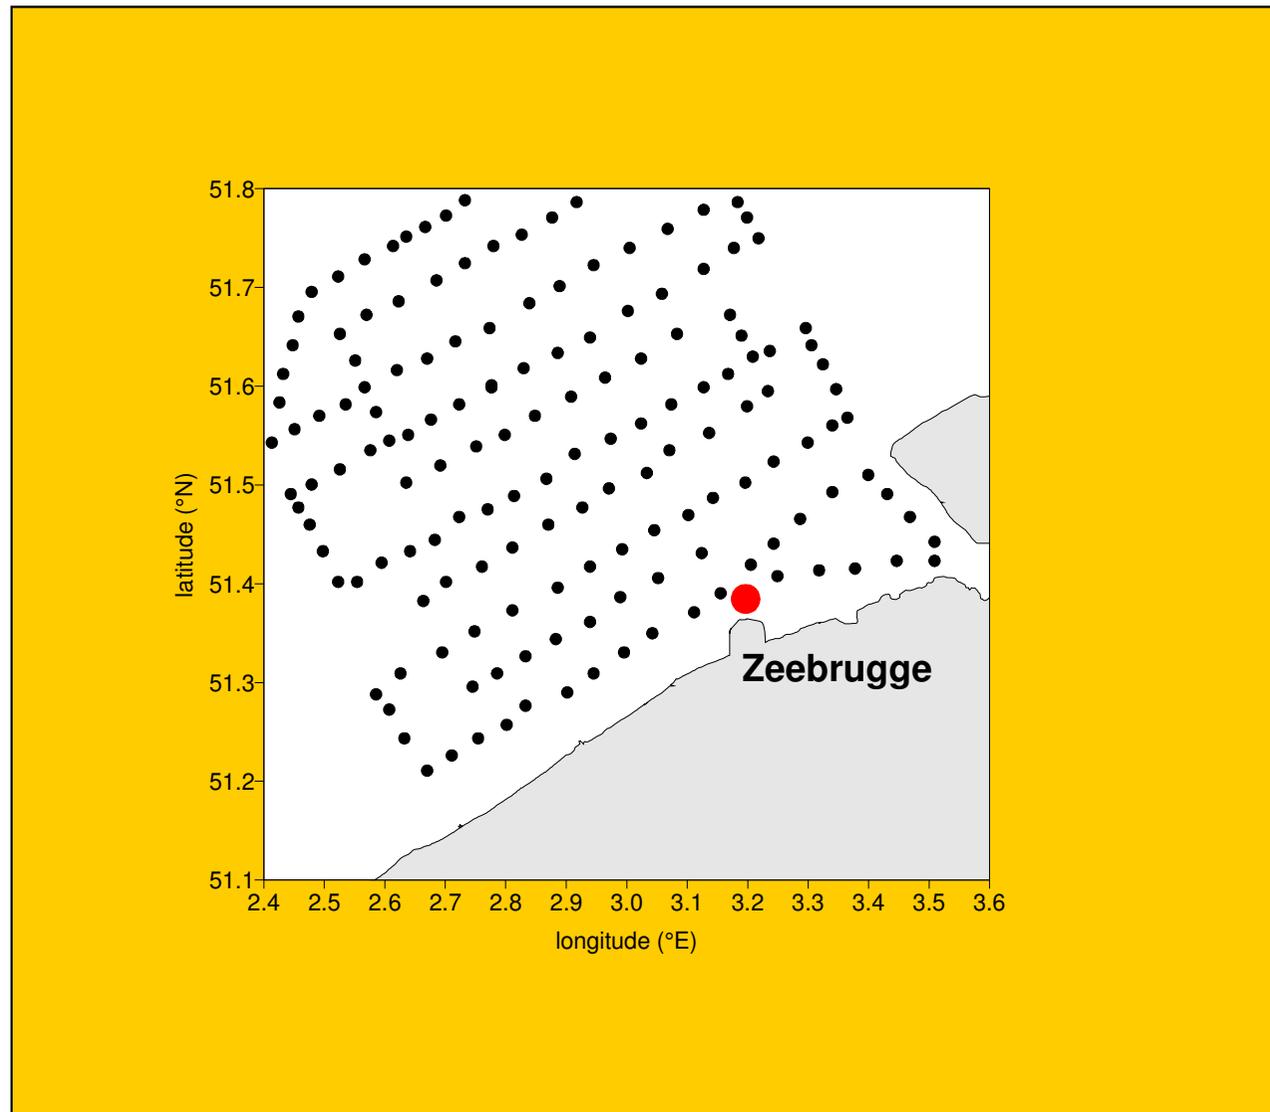

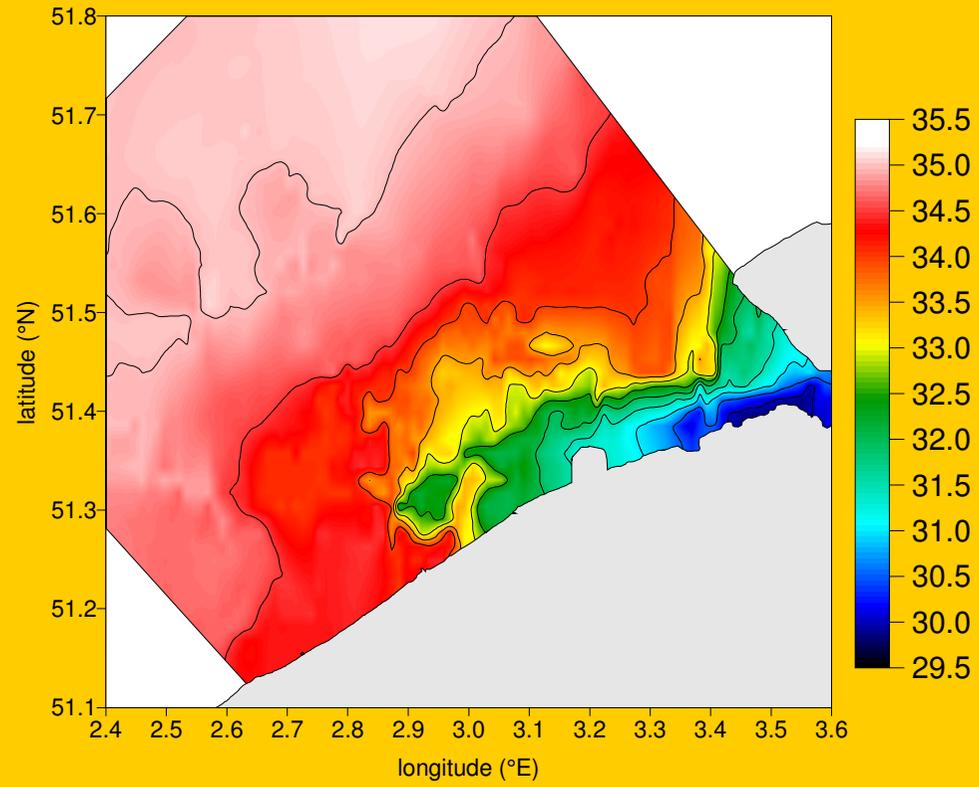

### emission of CO<sub>2</sub> by European estuaries

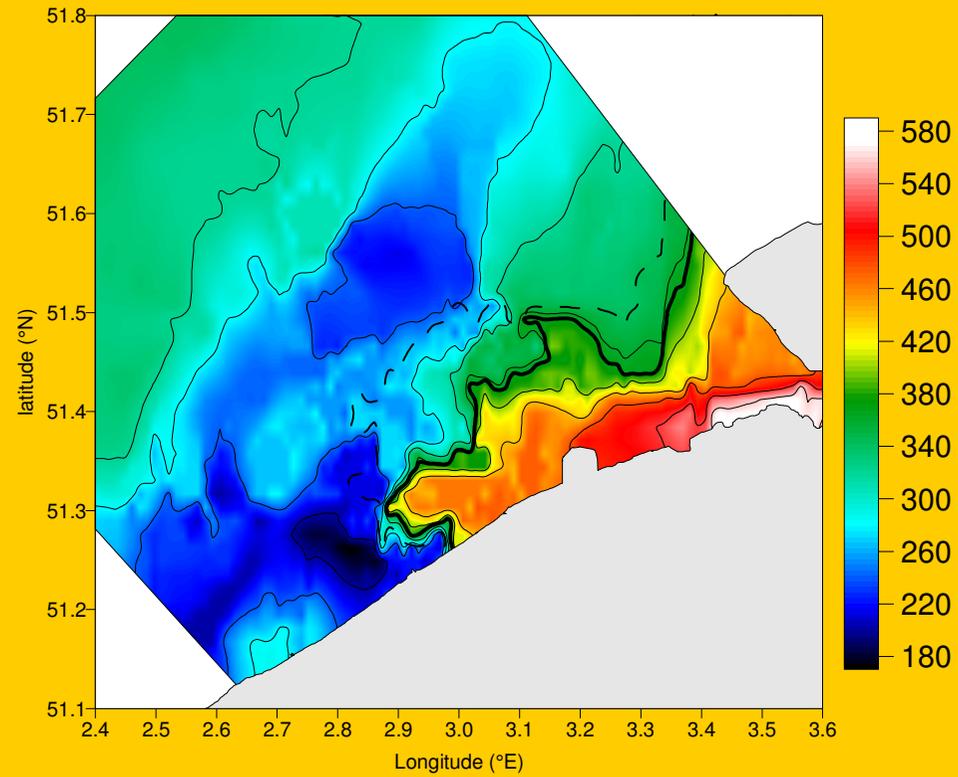

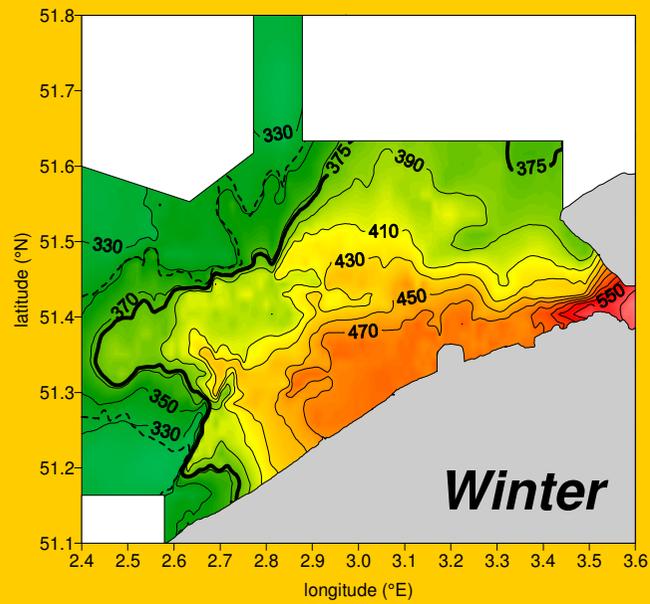

# Salinity 10-21 march 97

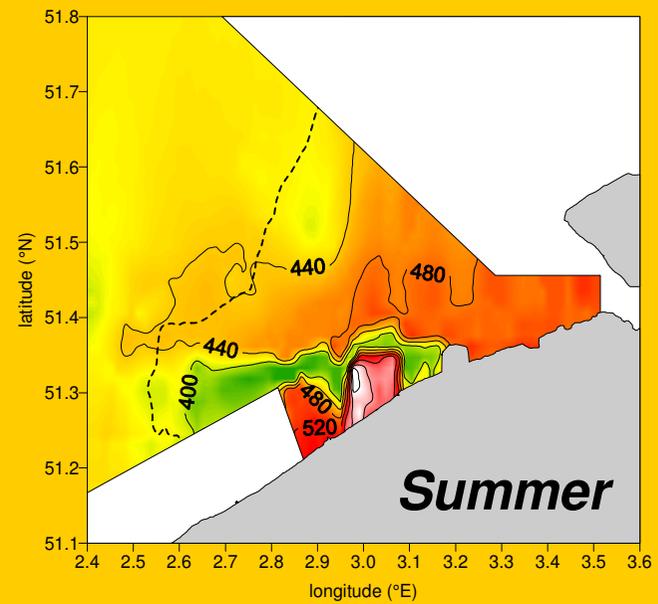

# Partial pressure of CO<sub>2</sub> (pCO<sub>2</sub>) 10-21 march 97

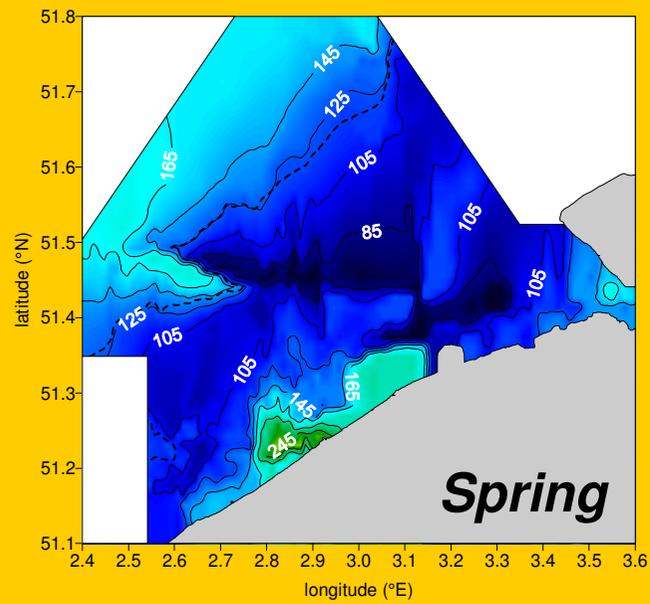

15-26 February 99

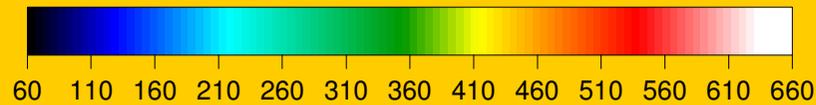

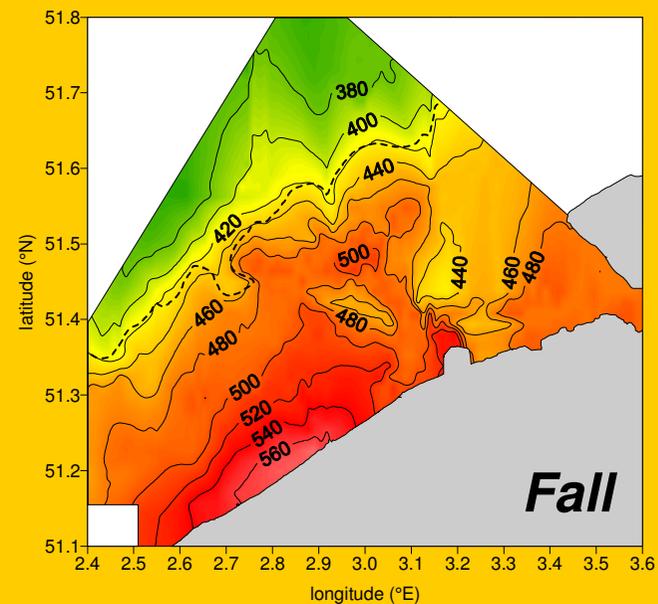

20-28 August 97

03-12 May 99

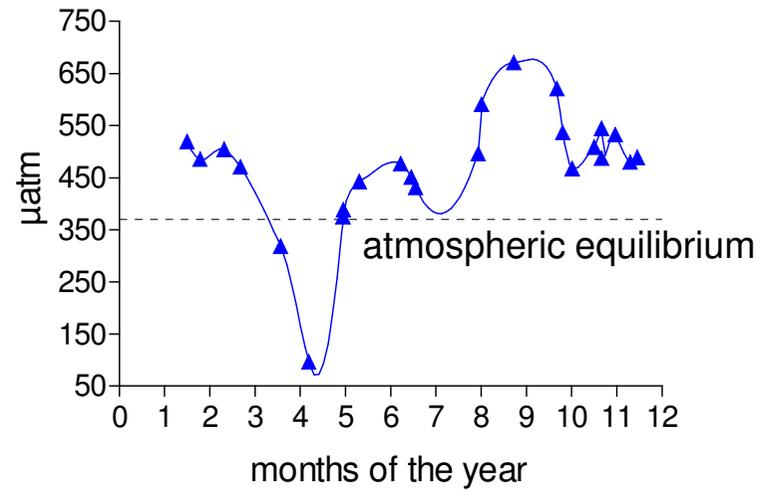

20-30 October 97

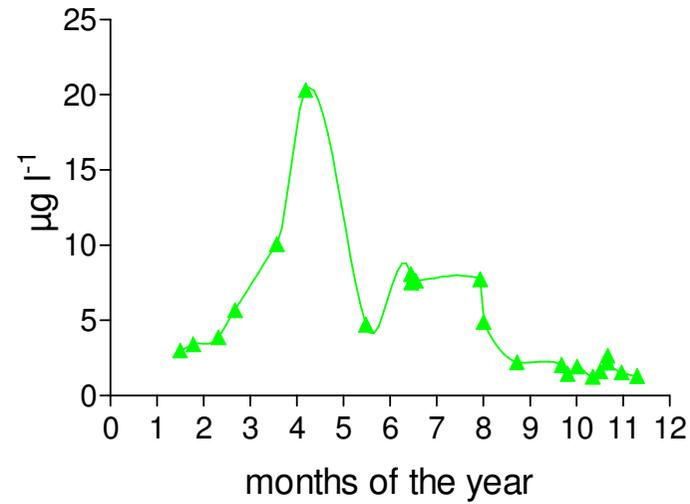

### pCO<sub>2</sub> Zeebrugge Station

### chlorophyll a

Annually integrated flux:

+ 4.5 mmol m<sup>-2</sup> day<sup>-1</sup> (exchange coeff. Wanninkhof 1992)

Annually integrated flux: + 4.5 mmol m<sup>-2</sup> day<sup>-1</sup> (exchange coeff. Wanninkhof 1992)

Surface of the Scheldt plume: 2100 km<sup>2</sup>

Annual emission of CO<sub>2</sub>: 112 tC day<sup>-1</sup>

Annually integrated flux:  $+ 4.5 \text{ mmol m}^{-2} \text{ day}^{-1}$  (exchange coeff. Wanninkhof 1992)

Surface of the Scheldt plume:  $2100 \text{ km}^2$

Annual emission of  $\text{CO}_2$ :  $112 \text{ tC day}^{-1} = 26\%$

**Of the inner Scheldt estuary characterised by:**

**Flux =  $+ 173 \text{ mmol m}^{-2} \text{ day}^{-1} = 456 \text{ tC day}^{-1}$**

**Surface =  $220 \text{ km}^2$**

## Provisional C budget for the Scheldt plume (tC day<sup>-1</sup>)

### Inputs

CO <sub>2</sub> from the Scheldt	34 <sup>a</sup>
Organic C from the Scheldt	16 <sup>b</sup> - 52 <sup>c</sup>
Organic C from the coast	47 <sup>c</sup>

### Outputs

Organic carbon preservation in sediments	62 <sup>c</sup>
CO <sub>2</sub> emission	112 <sup>a</sup>

### Sum

	97 - 133	175
--	----------	-----

<sup>a</sup> Borges & Frankignoulle (2002)

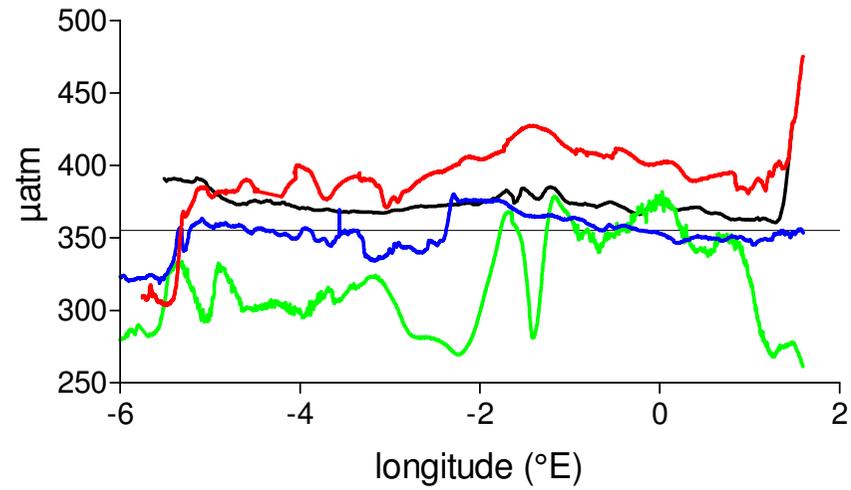

<sup>b</sup> Soetaert & Herman (1995)

<sup>c</sup> Wollast (1976; 1983)

# English Channel

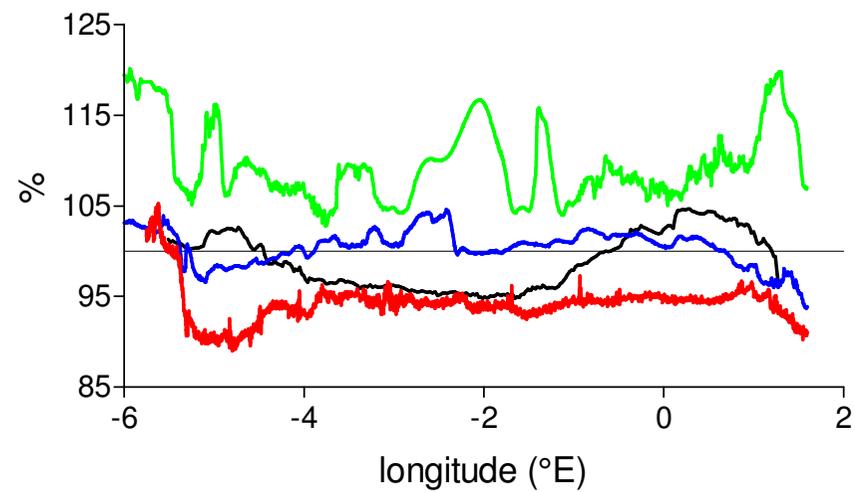

### pCO<sub>2</sub> English Channel

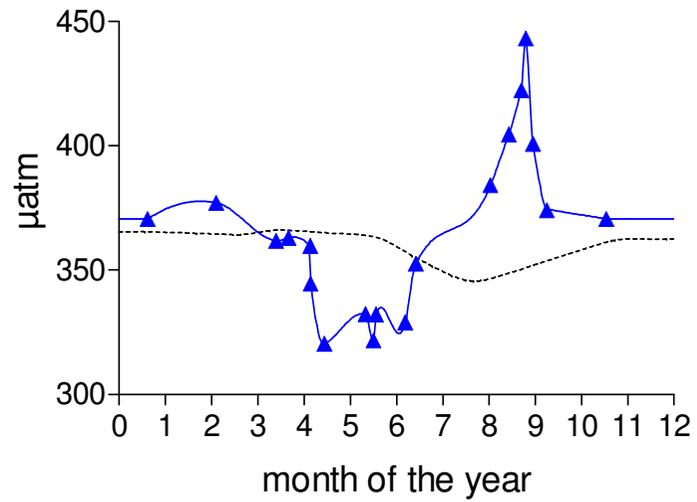

— Winter (March 95)    — Summer (July 98)  
— Spring (May 97)    — Fall (September 95)

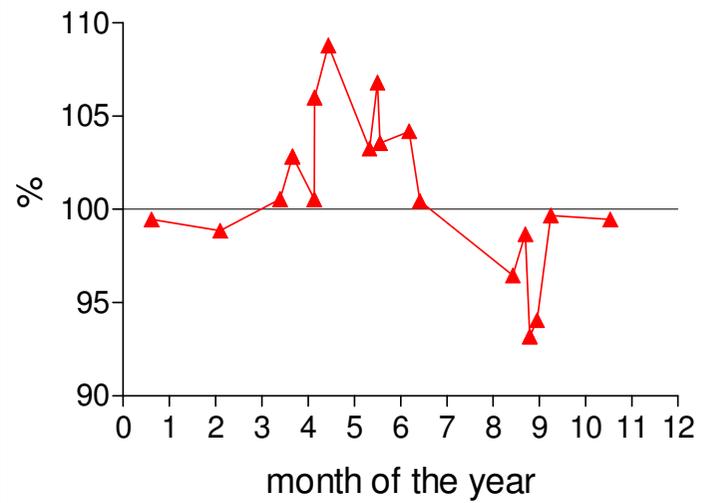

### O<sub>2</sub> saturation

**pCO<sub>2</sub>**  
**English Channel (1993-1999)**

**O<sub>2</sub> saturation**

**Annually integrated  $\Delta p\text{CO}_2 \approx 0$**

**Annually integrated  $\Delta p\text{CO}_2 \approx 0$**

**Annually integrated  $\text{CO}_2$  air-sea flux  $\approx 0$**

**Annually integrated  $\Delta p\text{CO}_2 \approx 0$**

**Annually integrated  $\text{CO}_2$  air-sea flux  $\approx 0$**

**Why?**

**Annually integrated  $\Delta p\text{CO}_2 \approx 0$**

**Annually integrated  $\text{CO}_2$  air-sea flux  $\approx 0$**

**Why?**

**New primary production =  $1.0 \text{ mmolC m}^{-2} \text{ day}^{-1}$   
( $^{15}\text{N}$  incubations from L'Helguen et al. (1996))**

**Annually integrated  $\Delta p\text{CO}_2 \approx 0$**

**Annually integrated  $\text{CO}_2$  air-sea flux  $\approx 0$**

**Why?**

**New primary production =  $1.0 \text{ mmolC m}^{-2} \text{ day}^{-1}$   
( $^{15}\text{N}$  incubations from L'Helguen et al. (1996))**

**$9 \text{ mmolC m}^{-2} \text{ day}^{-1}$**

**Benthic calcification in Eastern Channel =  $19 \text{ mmolCaCO}_3 \text{ m}^{-2} \text{ day}^{-1}$   
(Migné et al. 1998)**

**Release of  $\text{CO}_2 = +13 \text{ mmolC m}^{-2} \text{ day}^{-1}$**

**Area  $5400 \text{ km}^2$**

**Whole of Channel**

**Release of  $\text{CO}_2 = +0.9 \text{ mmolC m}^{-2} \text{ day}^{-1}$**

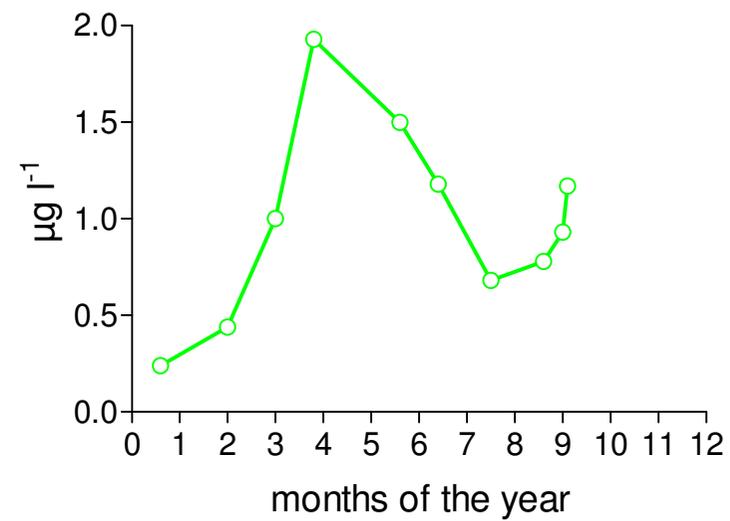

### pCO<sub>2</sub> Gulf of Biscay

### Chlorophyll a

**Air-sea exchange of CO<sub>2</sub> integrated annually in the Gulf of Biscay:**

**Wanninkhof (1992)**

**- 7.9 mmol m<sup>-2</sup> day<sup>-1</sup>**

**Air-sea exchange of CO<sub>2</sub> integrated annually in the Gulf of Biscay:**

**Wanninkhof (1992)                      - 7.9 mmol m<sup>-2</sup> day<sup>-1</sup>    =                      0.17 GtC year<sup>-1</sup>**

**Extrapolation to the overall European continental shelf (5 million km<sup>2</sup>)**

**Air-sea exchange of CO<sub>2</sub> integrated annually in the Gulf of Biscay:**

**Wanninkhof (1992)                      - 7.9 mmol m<sup>-2</sup> day<sup>-1</sup>    =                      0.17 GtC year<sup>-1</sup>**

**Extrapolation to the overall European continental shelf (5 million km<sup>2</sup>)**

**North Atlantic Ocean (42° to 78°N):**

**Wanninkhof (1992)                      =                      0.34 GtC year<sup>-1</sup>                      (Sarmiento *et al.* 1995)**

**Air-sea exchange of CO<sub>2</sub> integrated annually in the Gulf of Biscay:**

**Wanninkhof (1992)                      - 7.9 mmol m<sup>-2</sup> day<sup>-1</sup>    =                      0.17 GtC year<sup>-1</sup>**

**Extrapolation to the overall European continental shelf (5 million km<sup>2</sup>)**

**North Atlantic Ocean (42° to 78°N):**

**Wanninkhof (1992)                      =                      0.34 GtC year<sup>-1</sup>                      (Sarmiento *et al.* 1995)**

**European Continental shelf is an additional CO<sub>2</sub> sink of 50%**

**Air-sea exchange of CO<sub>2</sub> integrated annually in the Gulf of Biscay:**

**Wanninkhof (1992)                      - 7.9 mmol m<sup>-2</sup> day<sup>-1</sup>      =                      0.17 GtC year<sup>-1</sup>**

**Extrapolation to the overall European continental shelf (5 million km<sup>2</sup>)**

**North Atlantic Ocean (42° to 78°N):**

**Wanninkhof (1992)                      =                      0.34 GtC year<sup>-1</sup>                      (Sarmiento *et al.* 1995)**

**European Continental shelf is an additional CO<sub>2</sub> sink of 50%**

**East China Sea (Wang *et al.* 2000):**

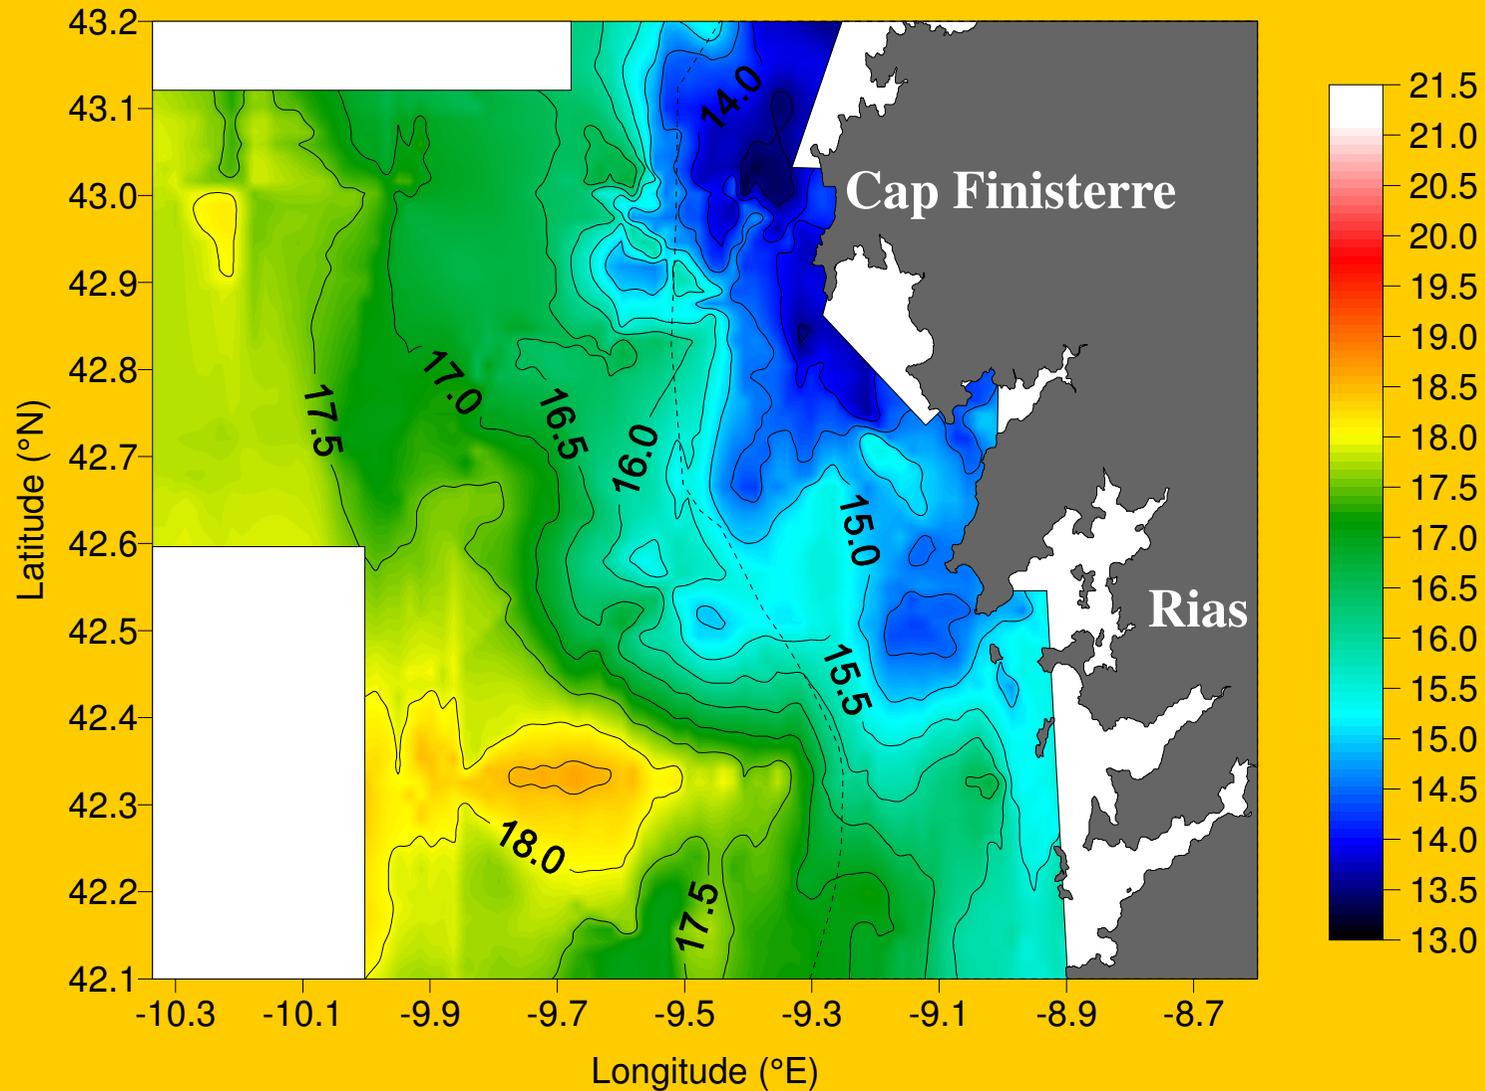

**Liss & Merlivat (1986)                      - 3.3 mmol m<sup>-2</sup> day<sup>-1</sup>**

**Tans *et al.* (1990)                      - 7.7 mmol m<sup>-2</sup> day<sup>-1</sup>**

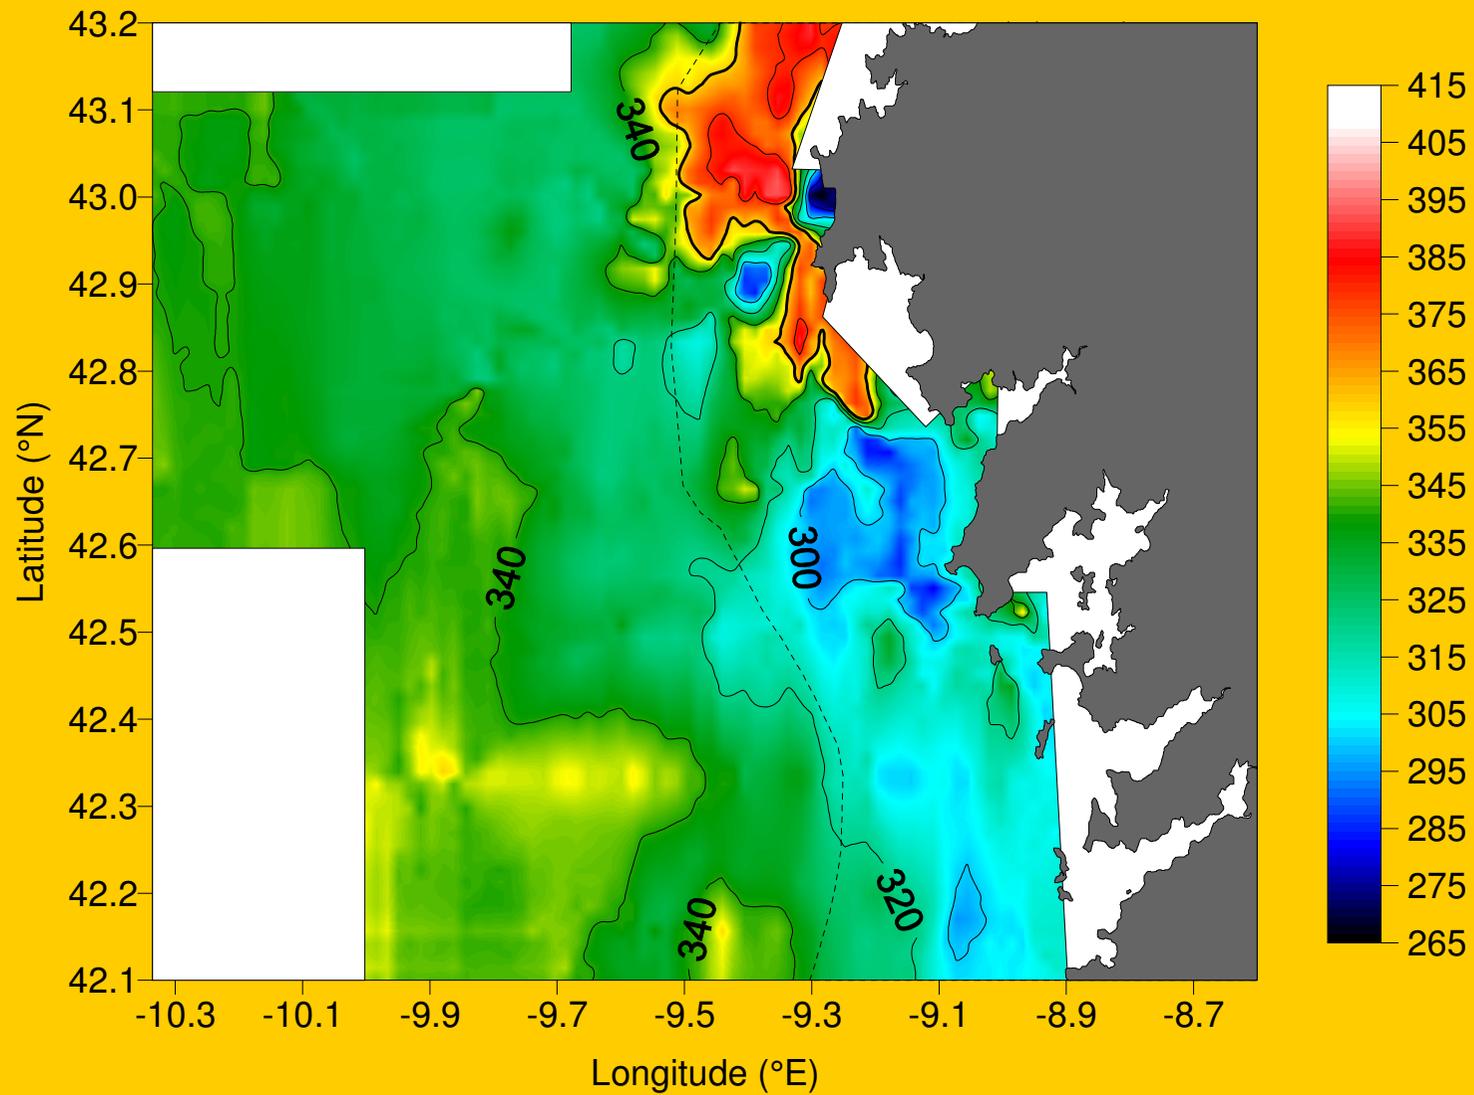

**Confirms the « continental shelf pump hypothesis » of Tsunogai *et al.* (1999):**

**Globally continental shelf is a sink of 0.5 to 1.0 GtC year<sup>-1</sup>**

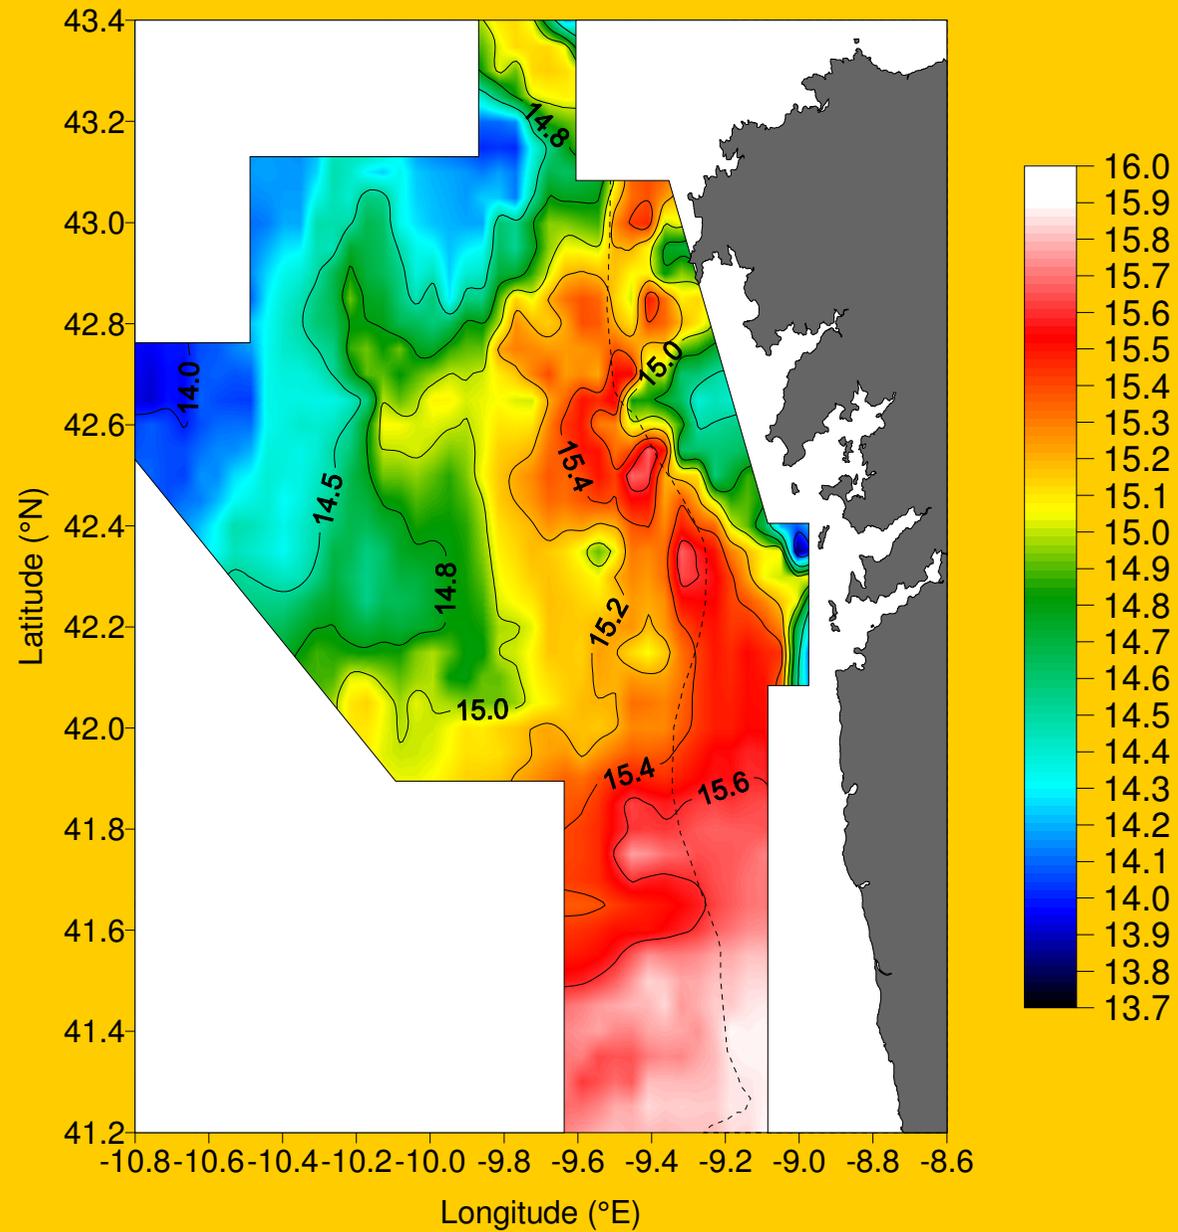

# Galician coast temperature (°C) 27 June - 7 July 98
