# Appendix 4. Glossary of verbal definitions

The following appendix provides a glossary of the verbal forms used in this work and the database created for this work. Note that the terminology and structure is based on the grammar of Ockinga.<sup>15</sup> The verbal forms are discussed in the form that they take, followed by the manner in which they can be used, separated into sub-groups. For full description with examples, see the grammar of Ockinga.

---

<sup>15</sup> Ockinga (2005).

Nominal *sḏm=f*<sup>16</sup>

(Present tense, active or passive)<sup>17</sup>

Form:	Gemination of 2ae gem. and 3ae inf. Passive might receive a .w or .y ending before the classifier.
Use:	Initial position in main clause: Emphatic use. Balanced sentence.
	Nominal use: Subject of an adjectival sentence. Following connectors.

Circumstantial *sḏm=f*<sup>18</sup>

(Present tense, active or passive)

Form:	Gemination of 2ae gem. Passive might receive a .w or .y ending before the classifier.
Use:	Non initial position: Temporal clause. <i>iw(=f) sḏm=f</i> . Non initial main clause <sup>19</sup> .

*sḏm.n=f*<sup>20</sup>

(Past tense, active or passive)

Form:	Addition of .n to the stem, after the classifier. Gemination might occur in 2ae gem. or 3ae inf.
Use:	(Nominal <i>sḏm.n=f</i> ) Initial position in main clause: Emphatic use. Balanced sentence. Subject of an adjectival sentence. Following connectors.
	(Circumstantial <i>sḏm.n=f</i> ) Non initial position: Temporal clause. <i>iw(=f) sḏm.n=f</i> . <i>ḥ<sup>c</sup>.n sḏm.n=f</i> . Non initial main clause <sup>21</sup> . Negation (present tense following the negative particle <i>n</i> ).

<sup>16</sup> Ockinga (2005), p. 37-38. Note that in Ockinga, this is called Aorist *sḏm=f* instead.

<sup>17</sup> Note that Ockinga (2005), p. 46-47, has a specific separate entry for the passive, but I rather consider it something that can happen to each distinct *sḏm=f* form. See Roccati (2006).

<sup>18</sup> Ockinga (2005), p. 36. Named Present *sḏm=f* as well in Ockinga.

<sup>19</sup> Continuation of an *iw(=f) sḏm=f* structure in a secondary phrase, without repeating the *iw(=f)*.

<sup>20</sup> Ockinga (2005), p. 38-41, used as a nominal or circumstantial, difference lies in use, rather than form, and is to some extent artificial.

<sup>21</sup> Continuation of an *iw(=f) sḏm.n=f* or *ḥ<sup>c</sup>.n sḏm.n=f* construction in a secondary phrase, without repeating the *iw(=f)* or *ḥ<sup>c</sup>.n*.

<i>Prospective sdm=f<sup>22</sup></i>	(Future tense, active or passive)	
Form:	Gemination of the 2ae gem. Potential addition of a .y ending or .w ending (for noun subjects) before or after the classifier.	
Use:	Initial position in main clause:	Main clause (future use). Conditional.
	Object clause:	After <i>rh</i> , <i>m33</i> , <i>wḏ</i> , <i>mri</i> and <i>sh3</i> .
	Non initial position:	Following non-enclitic particle <i>k3</i> . Following particle <i>ir</i> (fulfillable conditions). Final or consecutive clauses, expressing consequence. Negation after negative particle <i>n</i> (OK future tense negation). <i>in</i> -construction.
	Nominal use:	Following connectors.
<i>Subjunctive sdm=f<sup>23</sup></i>	(Future tense, active or passive)	
Form:	Potential addition of a .y ending. Potential addition of a .t ending with irregular 3ae inf. <i>m33</i> can be written as <i>m3n</i> . No gemination.	
Use:	Initial position in main clause:	Wish clause.
	Object clause:	after <i>rḏi</i> , <i>ḏḏ</i> and <i>hmt</i> .
	Non initial position:	Final or consecutive clauses, expressing consequence. Negation after the negative particle <i>nn</i> (future tense negation). Negation after <i>n-sp</i> . Following particle <i>ir</i> (fulfillable conditions).

<sup>22</sup> Ockinga (2005), p. 42-44.

<sup>23</sup> Ockinga (2005), p. 44-45.

<u><i>Indicative sdm=f</i></u> <sup>24</sup>	(Past tense, active or passive)
Form:	No gemination. <i>rdi</i> commonly written with a <i>r</i> . Passive might receive a <i>.w</i> or <i>.y</i> ending before the classifier.
Use:	Initial position in main clause: Main clause (Past tense, OK and CT). Non initial position: Negation after the negative particle <i>n</i> (Past tense negation). Nominal use: Following connectors <i>dr</i> 'since', <i>m-ht</i> 'after', <i>m</i> 'when', <i>n</i> 'because'.
<u><i>sdm.t=f</i></u> <sup>25</sup>	(Active or passive)
Form:	No gemination. Addition of <i>.t</i> ending before the classifier.
Use:	Nominal use: Following connectors <i>r</i> 'until', <i>dr</i> 'since'. Non initial position: Negation after negative particle <i>n</i> (action has not yet occurred).
<u><i>sdm.tw=f</i></u> <sup>26</sup>	(Passive form of active <i>sdm=f</i> forms)
Form:	Addition of a <i>.tw</i> ending after the classifier. Note that the <i>w</i> is commonly not written. Further changes are dependent on the <i>sdm=f</i> form the <i>.tw</i> ending modifies.
Use:	Passive form of the <i>sdm=f</i> the <i>.tw</i> ending modifies.
<u><i>sdm.n.tw=f</i></u> <sup>27</sup>	(Passive form of active <i>sdm.n=f</i> forms)
Form:	Addition of a <i>.tw</i> ending after the <i>.n</i> ending. Note that the <i>w</i> is commonly not written. Further changes are dependent on the <i>sdm.n=f</i> form the <i>.tw</i> ending modifies.
Use:	Passive form of the <i>sdm.n=f</i> the <i>.tw</i> ending modifies.
<u><i>sdmm=f</i></u> <sup>28</sup>	(Passive future tense)
Form:	Gemination of the third radical of the 3-lit. Potential addition for a <i>.w</i> ending for 3ae inf. and causative verbs.
Use:	Initial position in main clause: Main clause (Passive future tense)

<sup>24</sup> Ockinga (2005), p. 41. Note that it is called (Historic) Perfect in Ockinga.

<sup>25</sup> Ockinga (2005), p. 42, 47. Note that Ockinga separated the active and passive forms.

<sup>26</sup> Ockinga (2005), p. 45-46.

<sup>27</sup> Ockinga (2005), p. 45-46.

<sup>28</sup> Ockinga (2005), p. 47. Old Kingdom form, rarely occurs in the *Coffin Texts*, usually replaced by a *sdm.tw=f*.

Relative sdm.n=f<sup>29</sup>

Form:

(Past tense)

No gemination.

Can receive a .t, .w or .wt group depending on the number and gender of the antecedent.

Use:

Adjectival use:

Attribute

Nominal use, usually feminine:

Direct genitive construction.  
Object.  
Non-verbal sentence.

# Appendix 5. Verbal structure

The following appendix consists of the groups which were used for chapter 4. On the following pages, the phrases used for the comparison in chapter 4 are laid out, following the sequential order of spells used for this work. Every spell is divided in phrases, which are separated into different groups, based on lemma, morphology, syntax and position, as discussed in chapter 4.2.

For the purpose in clarity, the verbal form discussed for every group has been marked in red. Note that the witnesses might be marked in red or green as well. In these cases, red was used when the verb form was completely reconstructed. Green was used when the verb form was partially reconstructed.

However, it needs to be noted that the definition of a partial lacuna is extremely broad. For example, it can be used when only one sign of the sign group is damaged, even if the sign is recognisable. On the other end of the spectrum, it can be used when there are only traces left of one sign of the sign group.

For a glossary regarding the definitions of the verbal forms used, see appendix 4.
