**Next Generation Applications
of HTS Technologies
for plant viruses**

Sebastien Massart
Liege University – Gembloux Agro-Bio Tech - Belgium

1. The first decade of HTS

- ▶ The virus discovery party !

LIÈGE université
Gembloux
Agro-Bio Tech

Attendees @work :

**What can be the next generation applications
of HTS technologies for plant viruses ?**

1. The first decade of HTS

- ▶ The virus discovery party !
- ▶ Fruit tree viruses :
 - › >90 viral species
 - › Exponential growth

frontiers in Microbiology

**Is There a "Biological Desert" With
the Discovery of New Plant Viruses?
A Retrospective Analysis for New
Fruit Tree Viruses**

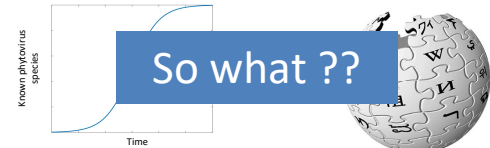

Wanying Hou^{1,2}, Shuang Li^{1,2*} and Sebastien Massart^{1*}

LIÈGE université
Gembloux
Agro-Bio Tech

The first decade of HTS

1. The first decade of HTS

- ▶ The rythm will slow down
- ▶ Earth wikipedia of phytovirus

So what ??

- ▶ But when ?

Participants @work :

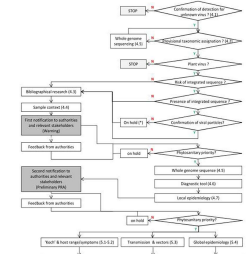

What can be the priorities/further steps once the plant virome has been discovered ?

www.wooclap.com/SIFAOD

2. The next decade with HTS : characterization

► Collective characterization framework in 2017 :

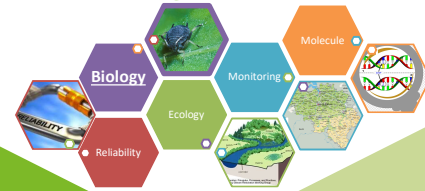

A Framework for the Evaluation of Biosecurity, Commercial, Regulatory, and Scientific Impacts of Plant Viruses and Viroids Identified by NGS Technologies

Selection Messier¹, Thierry Coudaneau², Anis Gh¹, Christophe Lacourme³, Gilles Pothier⁴, René Ravel⁵, Jean-André Reynard⁶, Jérôme Ravel⁷, François Bédouin⁸, Olivier Blanc⁹, Ben J. Wiley¹⁰, Jan P. T. Valkenburg¹¹, René Lambrechts¹², Olivier Lapeere¹³ and Thierry Rogier¹⁴

COST
EUROPEAN COOPERATION IN SCIENCE AND TECHNOLOGY

LIÈGE université

Agro-Bio Tech

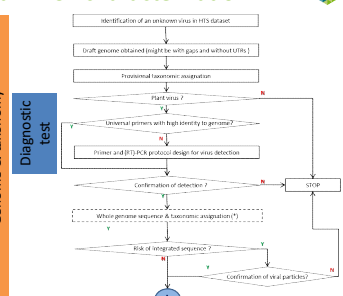

1. Biological characterization
Frameworks for prioritisation

Nuria Fontdevila Coline Temple

2. The next decade with HTS : characterization

► Update in 2021:

Genome & taxonomy

Diagnostic test

Identification of an unknown virus in HTS dataset
 Draft genome obtained (path or with gaps and without fills)
 Fragmental taxonomic assignment
 First step 2
 Universal primers with high sensitivity to genomes?
 Primer and RT-PCR protocol design for virus detection
 Confirmation of detection 2
 Where genome sequence & taxonomic assignment?
 Risk of integrated sequences?
 Confirmation of viral particles?

NEXTVR

2. The next decade with HTS : characterization

► The hangover of biological characterization

- Impossible to evaluate biological properties of all new viruses
- How to evaluate risks ... or benefits ?

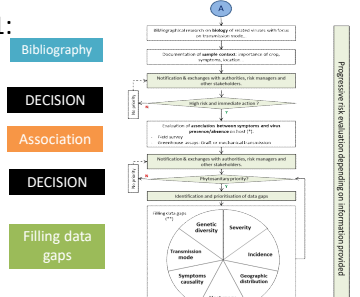

Plant virus evolution under strong drought conditions results in a transition from parasitism to mutualism

Rubén González¹, Anamarija Bulović², Francisco J. Escary³, Javier Martínez-Latorre⁴, Işan Melero⁵, Eric Pérez-Pérez⁶, Aurore Gómez-Caballero⁷, Pedro Carrasco⁸, and Santiago F. Elena⁹*

2. The next decade with HTS : characterization

► Update in 2021:

2. Ecology to support biology
Striking observations

Studying the virome of 3 *Poaceae* communities

Disease Risk

Human management

Biodiversity

Wheat or 6-row barley fields

Grazed pastures with 4 major species

Grasslands with high bio. value

Impact on the virome ?

Studying the virome of 3 *Poaceae* communities

- ▶ Sampling 2 years in spring
- ▶ 50 quadrats
- ▶ Botanical identification
- ▶ Sampling (4,296 plants)
 - Plant community
 - Targeted species
- ▶ VANA sequencing on pool of 50 samples

Studying the virome of 3 *Poaceae* communities

BYDV

PoLNVA

PoLV1

Lolium perenne

Poa trivialis

Viruses highly prevalent while maintaining ecological fitness of the host

Plants infected by many viruses while maintaining ecological fitness

3. Improving reliability of HTS
Controls & contaminations

Wei Rong Benedicte Lebas Johan Rollin

Reliability: the proper use of controls

- ▶ What would be your choice for HTS ?
- ▶ www.wooclap.com/SIFAOD

Horizon 2020 European Union Funding for Research & Innovation

Reliability: the proper use of controls

HTS is about counting sequences by millions
&
Determining presence of viral sequences

Horizon 2020 European Union Funding for Research & Innovation

Reliability: the proper use of controls

- ▶ Positive control
- ▶ Negative control
- ▶ Internal control
- ▶ Alien control

Biologicals ↔ sequence datasets

Horizon 2020 European Union Funding for Research & Innovation

Reliability: the proper use of controls

- ▶ Positive control
- ▶ Negative control
- ▶ Internal control

Biologicals

Horizon 2020 European Union Funding for Research & Innovation

Reliability: the proper use of controls

- ▶ Large scope of targets without *a priori*
- ▶ **+ control**
 - Mix of viruses (diversity)
 - Low concentration
 - › Evaluate LOD
 - › Minimize contamination risk
 - Check absence of other viruses (negative control)

Horizon 2020 European Union Funding for Research & Innovation

Reliability: the proper use of controls

- ▶ Large scope of target without *a priori*
- ▶ **Internal control**
 - Virus not present in analysed samples
 - Spiked at low concentration in all samples

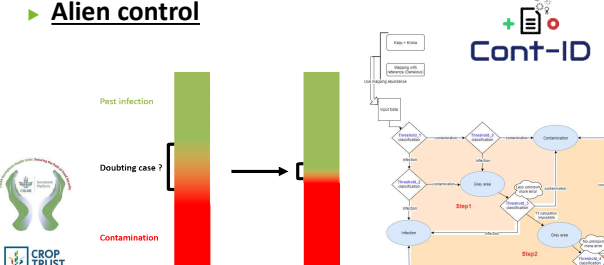

Screening for plant viruses by next generation sequencing using a modified double strand RNA extraction protocol with an internal amplification control

Prasad Koushik, Mark Bekker, Hanan Saeed, Heidi Ratz, Jan Byers, Michael Runt

Reliability: the proper use of controls

- ▶ **Alien control**

Reliability: the proper use of controls

- ▶ Large scope of targets without *a priori*
- ▶ **Alien control**
 - Virus not present in analysed samples

Source: www.plantnet.com

Reliability: the proper use of controls

Biologicals ↔ sequence datasets

Lucie Tamisier

Recommendation <https://genomics.peercommunityin.org/>

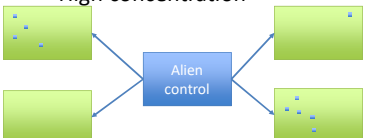

Toward a critical assessment of virus detection in plants

Semi-artificial datasets as a resource for the validation of bioinformatics pipelines for plant virus detection

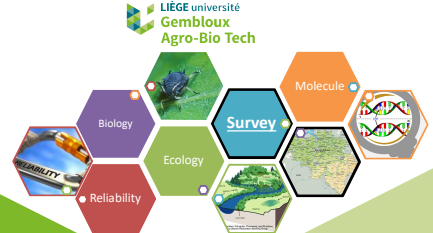

Reliability: the proper use of controls

- ▶ Large scope of targets without *a priori*
- ▶ **Alien control**
 - Virus not present in analysed in samples
 - High concentration

4. From a plant to a nation ?

Scale up of HTS for surveillance

A primer: analysing 47 field samples in Estonia

ORIGINAL RESEARCH ARTICLE
Front. Microbiol. | doi: 10.3389/fmicb.2021.673218

A Survey Using High-Throughput Sequencing Suggests That the Diversity of Cereal and Barley Yellow Dwarf Viruses Is Underestimated [Provisionally accepted] The final, formatted version of the article will be published soon. [Notify me](#)

Merike Sõmera¹, Sébastien Massart², Lucie Tamisier³, Pille Sooväli¹, Kanitha Sathees⁴ and Anders Kvarnheden⁵

Seviplant: analysing the virome at national scale

- Purification of viral particules by VANA
- Pools of 50 or 100 plants (with internal control)
- Alien control
- >10,000 plants sequenced so far

Seviplant: analysing the virome at national scale

ILVO Wallonie recherche CRA-W

30 689 km²

Seviplant: analysing the virome at national scale

Potato	Tomato	Nightshade	Eggplant	Capsicum	Mix
9300 plants	1187 plants	488 plants	82 plants	145 plants	317 plants
PVY	PHCMoV	PVY	PHCMoV	PHCMoV	PVY
PVS	Tomato black ring virus	Solanum nigrum ilavirus 1	Tomato bushy stunt virus	Cucumber mosaic virus	Tomato chlorosis virus
PVA	Strawberry latent ringspot virus	Cucumber mosaic virus	Satellite Tomato bushy stunt virus	Satellite Cucumber mosaic virus	Cucumber mosaic virus
PLRV	Alfalfa mosaic virus	Sambucus virus S	Moroccan pepper virus	Tomato mosaic virus	Olive latent virus 1
Tobacco rattle virus	Lettuce ring necrosis virus	Alfalfa mosaic virus	Olive mild mosaic virus	Pepper mild mosaic virus	Solanum nigrum ilavirus 1
Potato virus V	Olive mild mosaic virus	Melon chlorotic spot virus		PVY	Plantain virus X (LecM)
Alfalfa mosaic virus	Satellite Tobacco necrosis virus				Colombian datura virus
Poinsettia latent virus	Pepino mosaic virus	22 virus species not reported in Belgium			Potato yellowing virus
novel Tombusviridae	Olive latent virus 1	12 new hosts for viruses			PHCMoV
PHCMoV	Tomato chlorosis virus				PLRV

Seviplant: analysing the virome at national scale

- Total 17,600 plants
- 24 different genera
- In *Solanum* alone, 14 species
- Intra-species diversity
 - *Solanum lycopersicum* > 60 cv.
 - *Solanum tuberosum* > 45 cv.
 - *Capsicum annuum* > 15 cv.

5- SNPs & consequences ?
Behind the consensus

What do we miss with consensus ?

- ▶ Sanger time : 1 seq >Consensus sequence
ATCAGACTAGACGATAG
CAGAGGATACATTATGA
GACGATACAGATCAGAG
CAAGCATATTACAGAAA
ATTGCAATTGTCATATTG
- ▶ HTS time: Million seqs
- ▶ Behind the consensus ?
- ▶ Quasi-species

Experimental evolution with BYDV

- ▶ Luteovirus
- ▶ Aphid-transmission
- ▶ Mixed PAS/PAV population
- ▶ Wheat – Oat –Barley (2 & 6 rows)

What do we miss with consensus ?

- ▶ Sanger time : 1 seq >Consensus sequence
- ▶ HTS time: Million seqs
- ▶ Behind the consensus:
- ▶ Quasi-species

The classical approach: consensus tree

On the importance of SNPs behind consensus genome

PLOS PATHOGENS
