1. Figure S1: Auroral excluded regions
2. Figure S2: Emission angle and solar zenith angle histograms
3. Table S1: Latitudinal spectra attributes

**Figure S1.** Maps showing the auroral regions excluded from the latitudinal spectra. The red ovals are the Io footprint reference ovals and the blue ovals are 5000 km poleward of the red ovals. All latitudes and longitudes within the blue ovals are considered part of the auroral region and are excluded from the spectra.

**Figure S2.** Histograms showing the emission angle and solar zenith angle coverage for two latitude bins, centered at  $0^{\circ}$  and  $70^{\circ}\text{S}$ . The red squares show the region of geometry space that was used to produce the final spectra for each latitude.
