

IMA Commission on New Minerals, Nomenclature and Classification (CNMNC)

Newsletter 57

Ritsuro Miyawaki (Chairman, CNMNC)¹, Frédéric Hatert (Vice-Chairman, CNMNC)², Marco Pasero (Vice-Chairman, CNMNC)^{3*} and Stuart J. Mills (Secretary, CNMNC)⁴

¹ Department of Geology and Paleontology, National Museum of Nature and Science, 4-1-1 Amakubo, Tsukuba 305-0005, Japan – miyawaki@kahaku.go.jp;

²Laboratoire de Minéralogie, Université de Liège, B-4000 Liège, Belgium – fhatert@uliege.be; ³ Dipartimento di Scienze della Terra, Università di Pisa, Via Santa Maria 53, I-56126 Pisa, Italy – marco.pasero@unipi.it; and ⁴ Geosciences, Museums Victoria, PO Box 666, Melbourne, Victoria 3001, Australia – smills@museum.vic.gov.au

The information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the powder X-ray diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

NEW MINERAL PROPOSALS APPROVED IN AUGUST 2020

IMA No. 2020-014

Katsarosite

$\text{Zn}(\text{C}_2\text{O}_4) \cdot 2\text{H}_2\text{O}$

Esperanza Mine, Lavrion District Mines, Attikí Prefecture, Greece (37°43'31"N, 24°01'56"E)

Branko Rieck*, Gerald Giester, Christian Lengauer and Lutz Nasdala

*E-mail: rieckb49@univie.ac.at

The Zn analogue of humboldtine

Monoclinic: $C2/c$; structure determined

$a = 11.768(3)$, $b = 5.388(1)$, $c = 9.804(2)$ Å, $\beta = 127.045(8)^\circ$

4.768(94), 4.703(37), 4.674(100), 3.927(33), 3.569(27), 2.953(51),

2.657(22), 2.556(14)

Type material is deposited in the collections of the Institut für Mineralogie und Kristallographie der Universität Wien, Althanstrasse 14, 1090 Wien, Austria, catalogue number HS13.977 (holotype), and the Mineralogical Museum of Lavrio, Andrea Kordella Ave., 19500 Lavrio, Greece, catalogue number T3201 (cotype)

NOMENCLATURE/CLASSIFICATION PROPOSALS APPROVED IN SEPTEMBER 2020

IMA 20-D: Wöhlerite group

Proposal 20-D is accepted and the wöhlerite group is established. It currently includes 9 mineral species: cuspidine, baghdadite, burpalite, lävenite, normandite, niocalite, janhaugite, wöhlerite, and hiortdahlite. The chemical formula of the latter mineral has been revised to $\text{Na}_2\text{Ca}_4(\text{Ca}_{0.5}\text{Zr}_{0.5})\text{Zr}(\text{Si}_2\text{O}_7)_2\text{OF}_3$. Marianoite has been discredited as it is identical to wöhlerite.

Cerite supergroup

The cerite supergroup has been established and includes the cerite group (5 members) and merrillite group (8 members). Cerite-(La) has been renamed ferricerite-(La) since Fe is dominant in the M site. It has the formula $(\text{La,Ce,Ca})_9\text{Fe}^{3+}(\text{SiO}_4)_3(\text{SiO}_3\text{OH})_4(\text{OH})_3$.
