

# Gepimpte data! From English TV show to Dutch verb in less than three years

---

Stefano De Pascale, Dirk Pijpops, Freek Van de Velde & Eline Zenner

Lilith RU, University of Liège

QLVL RU, University of Leuven

# Overview

---

1. *Pimp my ride*: background and previous studies
2. Onomasiological competition: *pimpen* vs. *opleuken*
3. Morphological productivity of *pimpen*
4. Conclusions

# *Pimp my ride*: background and previous studies

---

- MTV show launched in 2004
- rich, multi-ethnic youth from Los Angeles
- cosmetic makeover of a shabby car provided to the show by a participant
- US cultural ideologies surrounding pimps and ghetto-style to a mass audience

< 2000 (in English):

1. *pimp* (noun): 'person who controls prostitutes'
2. *pimp* (verb): 'to act as a pimp' and 'to prostitute someone'

> 2000 (English & Dutch):

3. *pimp(en)* (verb): 'to fancify'

## *Pimp my ride*: background and previous studies

---

- **Van de Velde & Zenner (2010, 2015)**
  - introduction via international TV show → role of media?
  - taboo meaning, social stigma of the referents
  - unstraightforward denominal verbalization
  - proper name → road to common use?

**case of constructional change!**

from borrowed English proper name to Dutch transitive verb

# Pimp my ride: background and previous studies

sharp increase of uses of *pimp(en)* in the meaning 'to fancy' (light grey)

semantically broader range of pimped objects (light grey: other vehicles; **black: other objects**)

relaxing the construction *pimp POSS N* through open slots (light grey: other POSS, other N)

## *Pimp my ride*: background and previous studies

---

onomasiological competition  
between *pimpen* (dark grey) and  
*opleuken* (light grey)

### drawbacks

- small dataset (246 occurrences)
- suboptimal data source (newspapers)

## *Pimp my ride*: background and previous studies

---

- De Pascale, Pijpops, Van de Velde & Zenner (under review)
    - data source: Twitter; time span: 2007 – 2020;
    - 4,561 manually annotated occurrences
    - new: deconstructionalization score (aggregate over semantic/formal diagnostics [Petré & Van de Velde 2019])
    - results
      - within the *pimp POSS N* template
      - with the use of the Dutch *pimpen*
- } no further increase in deconstructionalization, only broader range of pimped objects

## *Pimp my ride*: background and previous studies

---

### *today, we go big data*

- 246 → 4,561 → 220,367 occurrences
  - i.e. all tweets ever tweeted in Dutch in which some form of *pimp*\* occurred
- pick up the thread left in previous studies
  1. onomasiological competition: *pimpen* vs. *opleuken*
  2. morphological productivity: *pimpen* and its derivations

# Onomasiological competition: *pimpen* vs. *opleuken*

---

## Hypotheses

- Sex: Women typically lead a language change  
→ Women *pimp*, men *leuken op*.
- Country: English influences both Belgian and Netherlandic Dutch, but *leuk* is a Netherlandic adjective  
→ Belgians *pimp*, Dutchmen *leuken op*.
- Year: *pimp* is young  
→ We used to *opleuken*, now we *pimp*
- Tweet length: longer tweets tend to be more formal  
→ *pimp* short, in longer sentences however we would rather use *opleuken*
- Activity tweeter: *pimp* is hip en cool  
→ Kabouter Kwebbel *pimps*, Kabouter Lui *leukt op*

# Onomasiological competition: *pimpen* vs. *opleuken*

---

## Sex

- Based on username
- Cleaned
- Database from naamkunde.net
- If no exact match: Levenshtein distance, unless distance relative to the length of the name is too long, or the difference between the closest male name and the closest female name is too small
- 96% accuracy (98% precision 'female', 96% precision 'male')

# Onomasiological competition: *pimp* vs. *opleuken*

---

## Country

- User location (added by tweeter)
- Cleaned
- Database from CBS and Statbel, manually extended (*Netherlands, Belgique, Vlaanderen, Achterhoek,...*)
- If no exact match: match longest substring of at least 6 characters (e.g. *aalsmeer netherlandsholland*)
- If no match: place country, place name (place where tweet was tweeted)
- 98% accuracy (77% precision 'Belgium', 100% precision 'Netherlands')

# Onomasiological competition: *pimpen* vs. *opleuken*

---

- Year: centred
- Tweetlength: logarithm base 10  
(Palliera et al. 2011: 2524)
- Activity tweeter: root base 10
  - Number of tweets
  - Number of followers
  - Number of people the tweeter follows
- Regression model based on
  - only uninflected past participles:  
24,242 occurrences
  - of which only the occurrences with an  
attributed sex and country label :  
4532 *pimpen* vs. 1201 *opleuken*

# Onomasiological competition: *pimpen* vs. *opleuken*

---

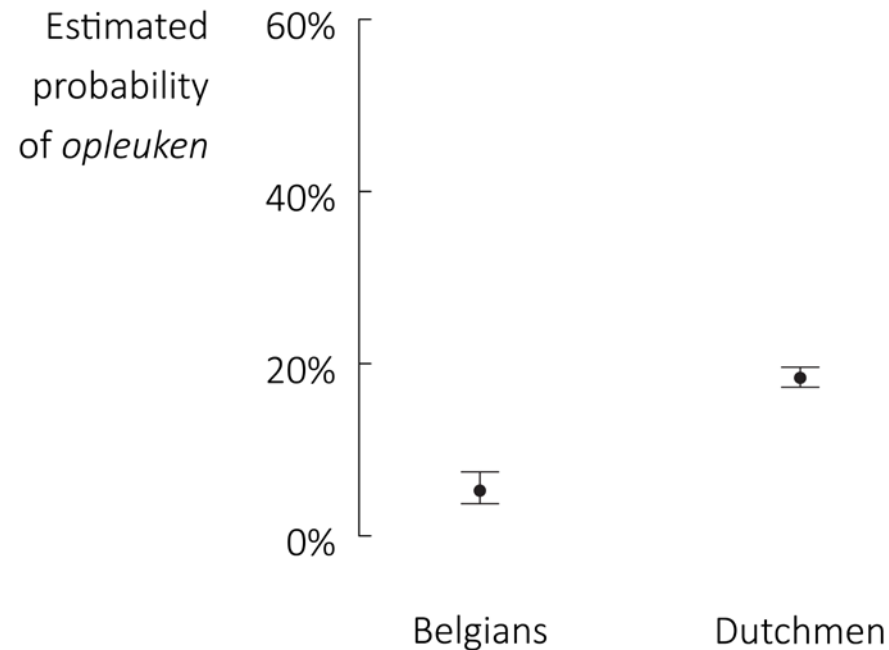

- Sex: Women typically lead a language change → Women *pimp*, men *leuken op*.

# Onomasiological competition: *pimpen* vs. *opleuken*

---

- Country: English influences both Belgian and Netherlandic Dutch, but *leuk* is a Netherlandic adjective  
→ Belgians *pimp*, Dutchmen *leuken op*.

Coefficient = 1.40 (Reference level: Belgians)

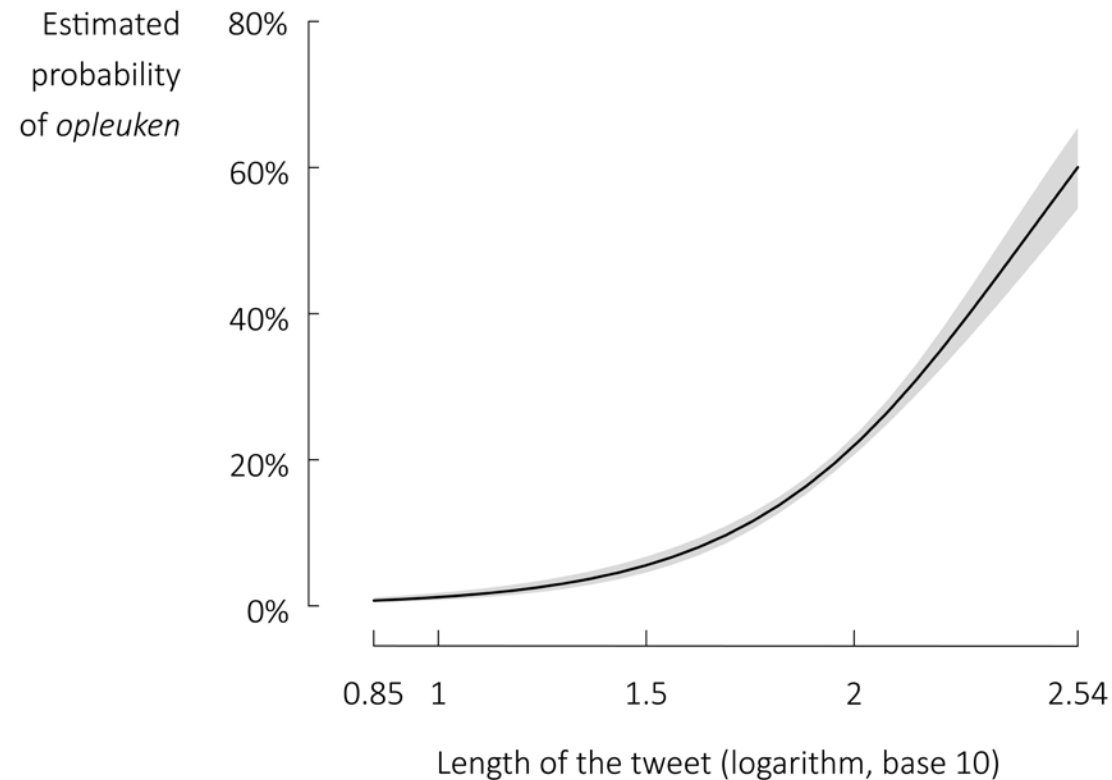

P-value < 0.0001

Confirmed

# Onomasiological competition: *pimpen* vs. *opleuken*

---

- Tweet length: longer tweets tend to be more formal  
→ *pimp* short, in longer sentences however we would rather use *opleuken*

Coefficient = 3.12

P-value < 0.0001

Confirmed

# Onomasiological competition: *pimpen* vs. *opleuken*

---

- Year: Pimp is young → We used to *opleuken*, now we *pimp*

Coefficient = 0.11

P-value < 0.0001

Not confirmed

# Onomasiological competition: *pimpen* vs. *opleuken*

- Activity tweeter: *pimp* is hip en cool  
→ Kabouter Kwebbel *pimps*, Kabouter Lui *leukt op*

Not confirmed

Estimated probability of *opleuken*

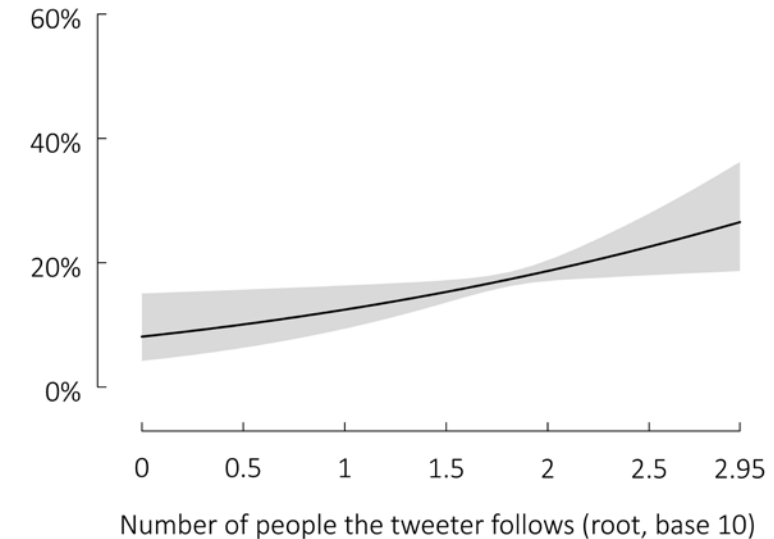

Coefficient = 0.18; p-value = 0.1081

Estimated probability of *opleuken*

Coefficient = 0.28; p-value = 0.1323

Estimated probability of *opleuken*

Coefficient = 0.48; p-value = 0.015

# Onomasiological competition: *pimpen* vs. *opleuken*

---

## Hypotheses

- Sex: Women typically lead a language change  
→ Women *pimp*, men *leuken op*. **Confirmed**
- Country: English influences both Belgian and Netherlandic Dutch, but *leuk* is a Netherlandic adjective  
→ Belgians *pimp*, Dutchmen *leuken op*. **Confirmed**
- Tweet length: longer tweets tend to be more formal  
→ *pimp* short, in longer sentences however we would rather use *opleuken*. **Confirmed**
- Year: Pimp is young  
→ We used to *opleuken*, now we *pimp*. **Not Confirmed**
- Activity tweeter: pimpen is hip en cool  
→ Kabouter Kwebbel *pimps*, Kabouter Lui *leukt op*. **Not confirmed**

# Onomasiological competition: *pimpen* vs. *opleuken*

---

## Interpretation

- Year: *Pimp* is young
  - We used to *opleuken*, now we *pimp*. **Not Confirmed**
  - A rising tide lifts all boats?
- Activity tweeter: *pimp* is hip en cool
  - Kabouter Kwebbel *pimps*, Kabouter Lui leukt op. **Not confirmed**
  - Official accounts of news agencies, firms, institutions, etc. seem to be more active than regular tweeters

## Morphological productivity: *pimpen* and its derivations

---

- morphological families and big data
  - enough data for the long tail of infrequent observations
  - how to calculate morphological diversity and productivity?

# Morphological productivity: *pimpen* and its derivations

*overpimpen* ('unnecessary fancify')

*Van die boeren met hun overgepimpte auto's en loeiharde, marginale muziek*

*Ga die overpimpte dopingwedstrijd geen 3 weken mn TL laten verpleuren.*

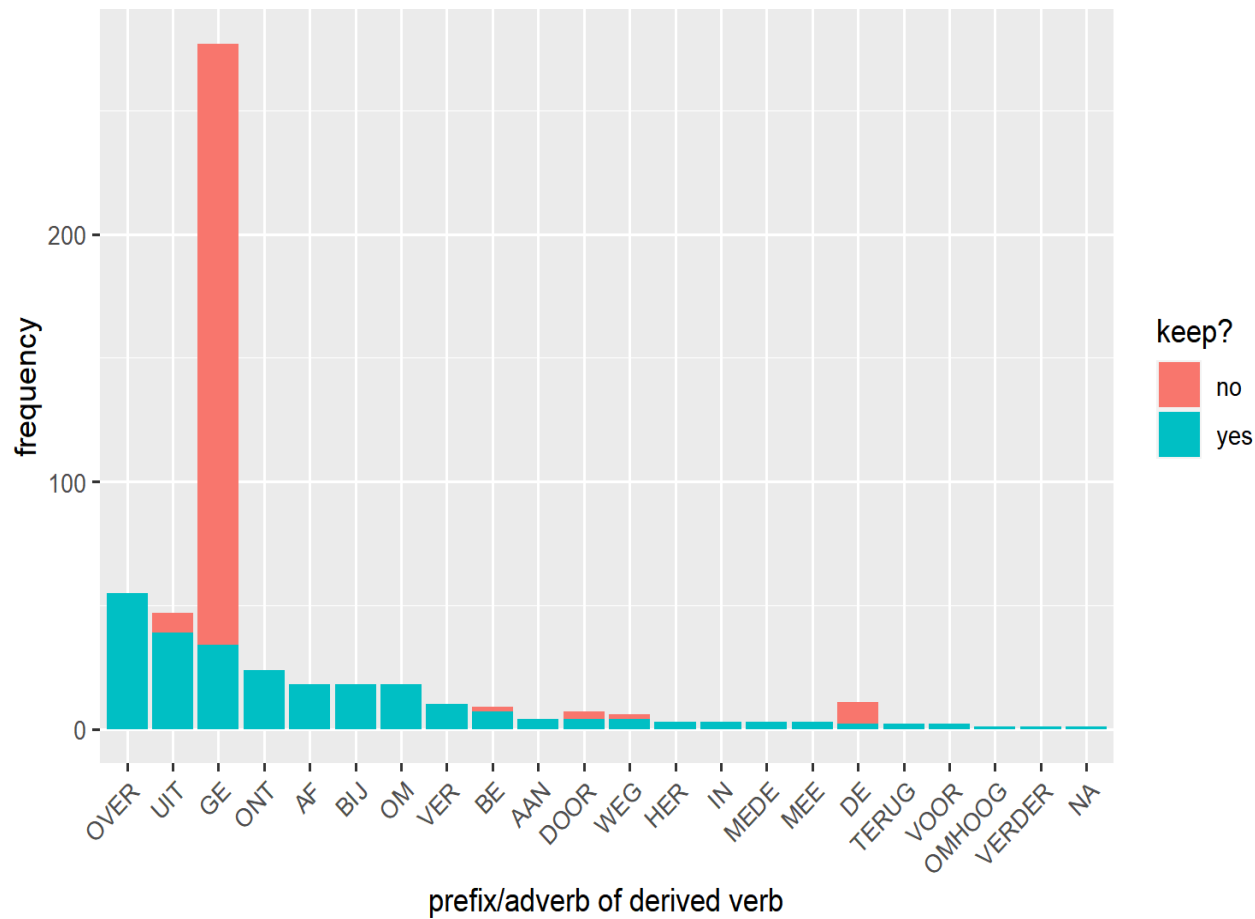

*uitpimpen* ('to prostitute someone')

*Poor girl werd gewoon gecaffished en daarna uitgepimpd*

*uitpimpen* ('to finish fancifying something')

*Als je uitgepimpt bent is er in Gouda nog een ongepimpte versie waar je je mag uitleven ;-)*

# Morphological productivity: *pimpen* and its derivations

formal variation

*overpimpen* ('unnecessary fancification')  
Van die boeren met hun **overgepimpte** auto's en loeiharde, marginale muziek

Ga die **overpimpte** dopingwedstrijd geen 3 weken mn TL laten verpleuren.

semantic variation

*uitpimpen* ('to prostitute someone')  
Poor girl werd gewoon gecaffished en daarna uitgepimpd

*uitpimpen* ('to finish fancifying something')  
Als je uitgepimpt bent is er in Gouda nog een ongepimpte versie waar je je mag uitleven ;-)

# Morphological productivity: *pimpen* and its derivations

---

how to measure productivity in the long tail of infrequent events? [Baayen 2009]

- relative type frequency? type/token ratio?
  - too dependent on sample size (which is unknown)
  - frequency distribution of *pimpen* derivations is strongly dependent on popularity of Twitter!
  - underestimation of rare events

# Morphological productivity: *pimpen* and its derivations

---

- solution? corrected Shannon entropy measures (Gotelli & Chao, 2013)
  - estimate the amount of diversity in a frequency distribution
- no correction = maximum likelihood
  - diversity of morphological family decreases over time
- correction for rare and unseen forms = shrinkage factor, Chao-Shen estimation
  - diversity of morphological family increases and stabilizes over time

# Conslusions

---

- replications and extensions of 2010 study on *pimpen*
  - more data did not seem to confirm the neat trends that were visible in the small dataset: no increased deconstructionalization
  - perhaps constructional change already completed?
- focus on onomasiological competition:
  - predictions borne out for sex, country and ‘formality’
  - what is Twitter really?!
- focus on morphological productivity:
  - sustained diversity over the years → moderate productivity of *\*pimp\**
  - careful with calculations → opportunities by big data for the long tail
