</table>
[1] Ideas; formulation or evolution of overarching research goals and aims.

[2] Management activities to annotate (produce metadata), scrub data and maintain research data (including software code, where it is necessary for interpreting the data itself) for initial use and later re-use.

[3] Application of statistical, mathematical, computational, or other formal techniques to analyse or synthesize study data.

[4] Acquisition of the financial support for the project leading to this publication.

[5] Conducting a research and investigation process, specifically performing the experiments, or data/evidence collection.

[6] Development or design of methodology; creation of models.

[8] Provision of study materials, reagents, materials, patients, laboratory samples, animals, instrumentation, computing resources, or other analysis tools.

[9] Programming, software development; designing computer programs; implementation of the computer code and supporting algorithms; testing of existing code components.

[10] Oversight and leadership responsibility for the research activity planning and execution, including mentorship external to the core team.

[11] Verification, whether as a part of the activity or separate, of the overall replication/reproducibility of results/experiments and other research outputs.

[12] Preparation, creation and/or presentation of the published work, specifically visualization/data presentation.

[13] Preparation, creation and/or presentation of the published work, specifically writing the initial draft (including substantive translation).

[14] Preparation, creation and/or presentation of the published work by those from the original research group, specifically critical review, commentary or revision – including pre- or post-publication stages.
