Your Abstract #19548 Submission Has Been Received

PRINT/SAVE THIS PAGE

You have submitted the following abstract to the Goldschmidt 2023 Conference. A confirmation email has been sent to the submitter and all named authors. Receipt of this notice does not guarantee that your submission was complete or free of errors.

Abstract Information

Abstract ID:
19548

Primary Session:
6d Fourier transform mass spectrometry in biogeochemical studies - new opportunities to address scientific problems

Secondary Session:
10g - Biosignature Diversity, Preservation, and Detection through Geologic Time

Abstract Title:
New objects of study for mass spectrometry by secondary-ion and laser desorption-ionization: Acritarchs, a pilot study of the species "*Gloeocapsomorpha prisca*"

Authors (presenting author in bold):
Mathilde Bon[1,2,3], Kevin Lepot[1,4], Yvain Carpentier[2], Fabrice Bray[5], Armelle Riboulleau[1], François Baudin[6], Nicolas Nuns[7], Dr. Maxime Cyril Bridoux, Ph.D, H.D.R.[8], Christian Rolando[5], Philippe Steemans[9] and Thijs R. A. Vandenbroucke[3], (1)Univ. Lille, CNRS, Univ. Littoral Côte d'Opale, UMR 8187 – LOG – Laboratoire d'Océanologie et de Géosciences, (2)Univ. Abstract Text:
Acritarchs are organic-walled microfossils of uncertain biological affinity. The species *G. prisca* (~10µm), a probable cyanobacterium, comprises the bulk of the insoluble organic matter (kerogen) from a rock type named

"kukersite"[1–5]. *G. prisca* has been studied by gas chromatography-mass spectrometry (GC-MS) using extraction, chemolysis, and pyrolysis[1–4].

Here we test the potential of laser-assisted mass spectrometry techniques to analyze the molecular composition of single microfossils. Bitumen and kerogen (dominated by the *G. prisca* microfossils) were analyzed after organic solvent extractions and demineralization of a sample from a 460 million year-old deposit of north-western Russia[5]. Using secondary ion time-of-flight mass spectrometry (ToF-SIMS), we carry out mass spectrometric imaging with ~1 µm spatial resolution and high surface sensitivity. We perform high resolution two-step laser desorption-ionization mass spectrometry (HR-µL2-MS) with a 140 µm probe and laser desorption-ionization Fourier transform ion cyclotron resonance mass spectrometry (LDI-FT-ICR-MS) with laser probes down to less than 20 µm.

The ToF-SIMS and HR-µL2-MS analysis of microfossils are dominated by abundant (poly)aromatic hydrocarbons. Unique formula assignments were possible for the ions that dominate the signal between ca. 150-450 m/z in LDI-FT-ICR-MS. Thus, we identify a few thousands of molecular formulae and show aromatic hydrocarbons, oxygenated and nitrogenous compounds, with a major contribution of the O_{2-4} compounds. This predominance is consistent with the organic composition of the *G. prisca* wall deduced from pyrolysis- and chemolysis-assisted GC-MS analyses[1–4]. Importantly, the bitumen and the microfossils showed distinct molecular signatures with all techniques.

The potential effects of desorption lasers in LDI-FT-ICR-MS, such as fragmentation and pyrolysis, were examined using principal component analysis. Our analytical method and data analysis workflow is expected to help future molecular discrimination of microfossils from heterogenous assemblages, and can help the search for molecular signatures for exobiology[6].

Keywords:
biogeochemistry, mass spectrometry and microfossil

Submitter's E-mail Address:
mathilde.bon2@univ-lille.fr

Submitter Full Name:
Mathilde Bon

Preferred Presentation Style:
Oral

Conference Attendance:
In person

Registration:
I understand that the presenting author named in this submission must register for the conference by 31 May 2023.

Submission Permission and Copyright:
I grant non-exclusive copyright for my abstract and any related uploaded content to the Conference Exchange and the conference owners. I give permission for my details to be stored in the conference database. I, and the presenting author (if different than the submitter), agree to be contacted by the conference organizers about this submission. I agree to the recording and online streaming of any presentations scheduled as a result of this submission. I confirm all listed authors have agreed to these terms.

If necessary, you can make changes to your abstract submission up until the abstract submission deadline on Wednesday 1 March 2023 (23:59 CET).

To access your submission in the future:

- If you are a listed as an author on this abstract, you can access the submission via 'My Goldschmidt' on the Goldschmidt2023 website.
- If you are not listed as an author, use the direct link to your abstract submission given in one of the automatic confirmation emails that were sent to you during the submission. Note that you will need to log in to your Goldschmidt2023 account to access the submission.

Any changes that you make will be reflected instantly in your submission. You DO NOT need to go through all of the submission steps again in order to change just one part. For example, if you want to change only the abstract title, go the submission, click on the "Details" tab in the abstract submission menu, edit the title, and then click on save/submit on that step and your changes will then be saved.

Help and Contacts

For any technical queries related to your submission, your Goldschmidt account, or use of the online submission system or

website, please contact goldschmidt@confex.com.

For any queries related to the science program in general, please contact scienceprogram@goldschmidt.info.

When you have completed your submission, you may close this browser window.
