Belgian Research Action through Interdisciplinary Networks

3) The TANGO framework

TANGO

Estimating Tipping points in habitability of ANtarctic benthic ecOsystems under future GLObal climate change scenarios

BRAIN-be 2.0

Belgian Research Action through Interdisciplinary Networks

WP1

- Individual physiological responses of species
- Dynamic Energy Budget modeling

WP2

- Habitat mapping through ROV imaging
- Food-web structure description

WP3

- Carbon cycling in the ecosystem (production, export, storage, cycling and burial)

WP4

- Integration of WP1-3 results in a mechanistic model of the WAP benthic ecosystem

3) The TANGO framework

TANGO

Estimating Tipping points in habitability of ANtartic benthic ecOsystems under future GLObal climate change scenarios

BRAIN-be 2.0

Belgian Research Action through Interdisciplinary Networks

WP1

- Individual physiological responses of species
- Dynamic Energy Budget modeling

WP2

- Habitat mapping through ROV imaging
- Food-web structure description

WP3

- Carbon cycling in the ecosystem (production, export, storage, cycling and burial)

WP4

- Integration of WP1-3 results in a mechanistic model of the WAP benthic ecosystem

4) Sampling design

Quantitative sampling of benthos

Transects (A) & Quadrates (B)

4) Sampling design

Quantitative sampling of benthos

Transects (A) & Quadrates (B)

Sampling of pelagic food sources

+

Niskin samples (C) filtered on GFF filters (D) & eDNA capsules (E)

4) Sampling design

TANGO 2023 sampling stations

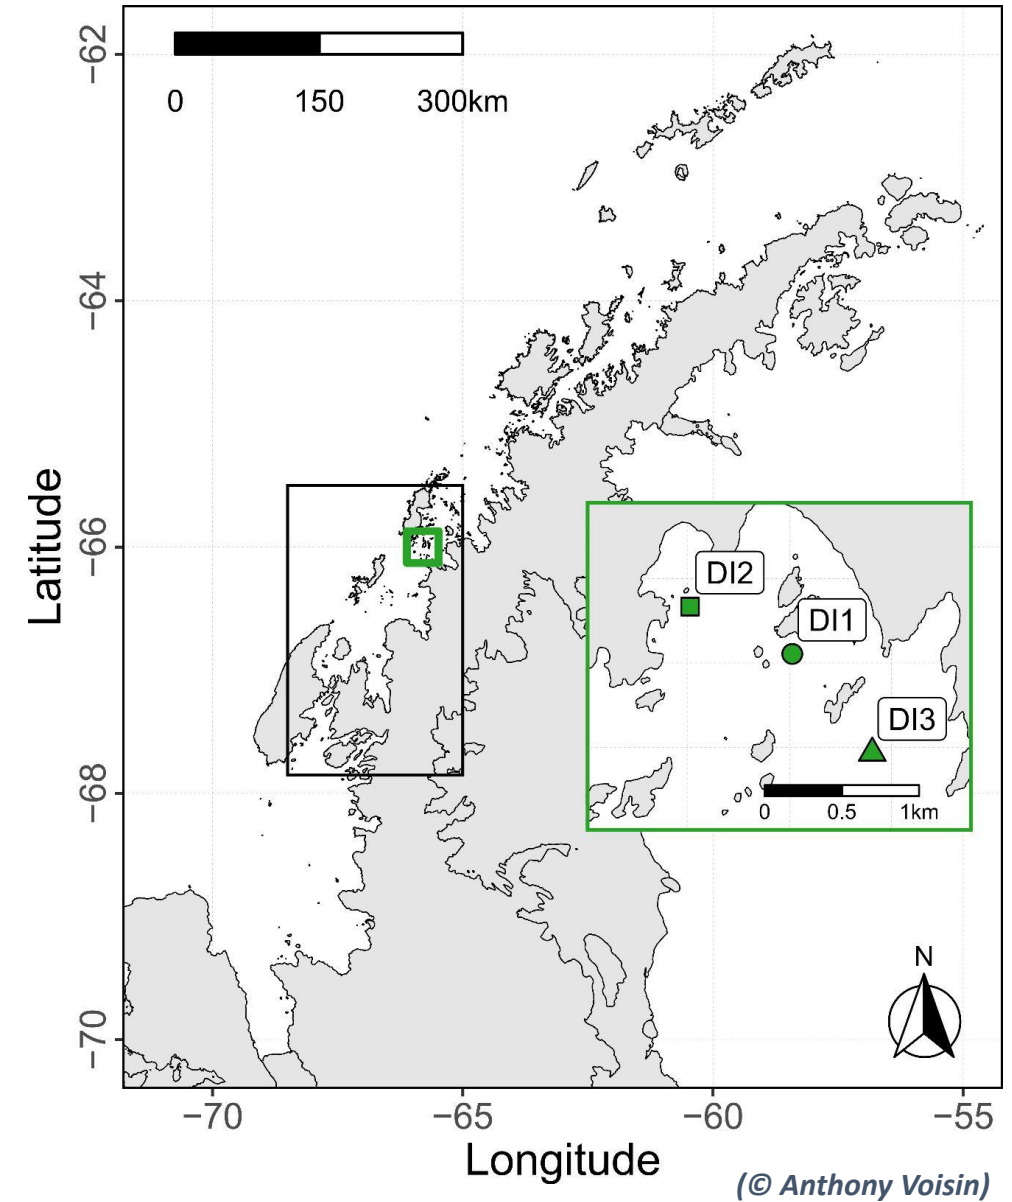

4) Sampling design

□ Dodman Island:

- Two macroalgae forests on rocky bottom
 - DI1 & ▲ DI3
- One soft-bottom community
 - DI2

TANGO 2023 sampling stations

4) Sampling design

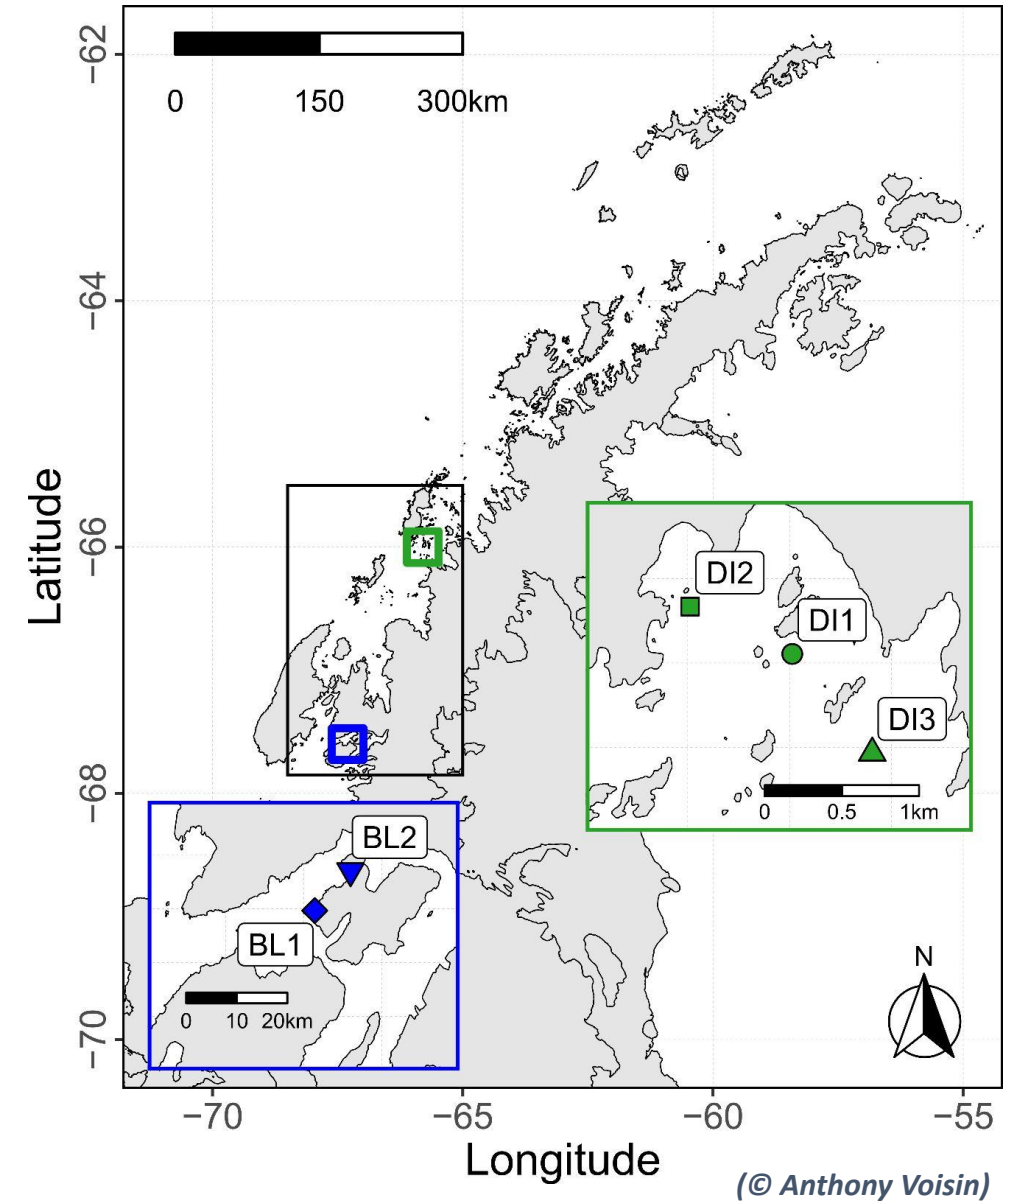

Dodman Island:

- Two macroalgae forests on rocky bottom
 - DI1 & ▲ DI3
- One soft-bottom community
 - DI2

Blaiklock Island:

- One soft-bottom community
 - ◆ BL1
- One rocky slope sparsely covered with algae
 - ▼ BL2

TANGO 2023 sampling stations

4) Sampling design

□ Dodman Island:

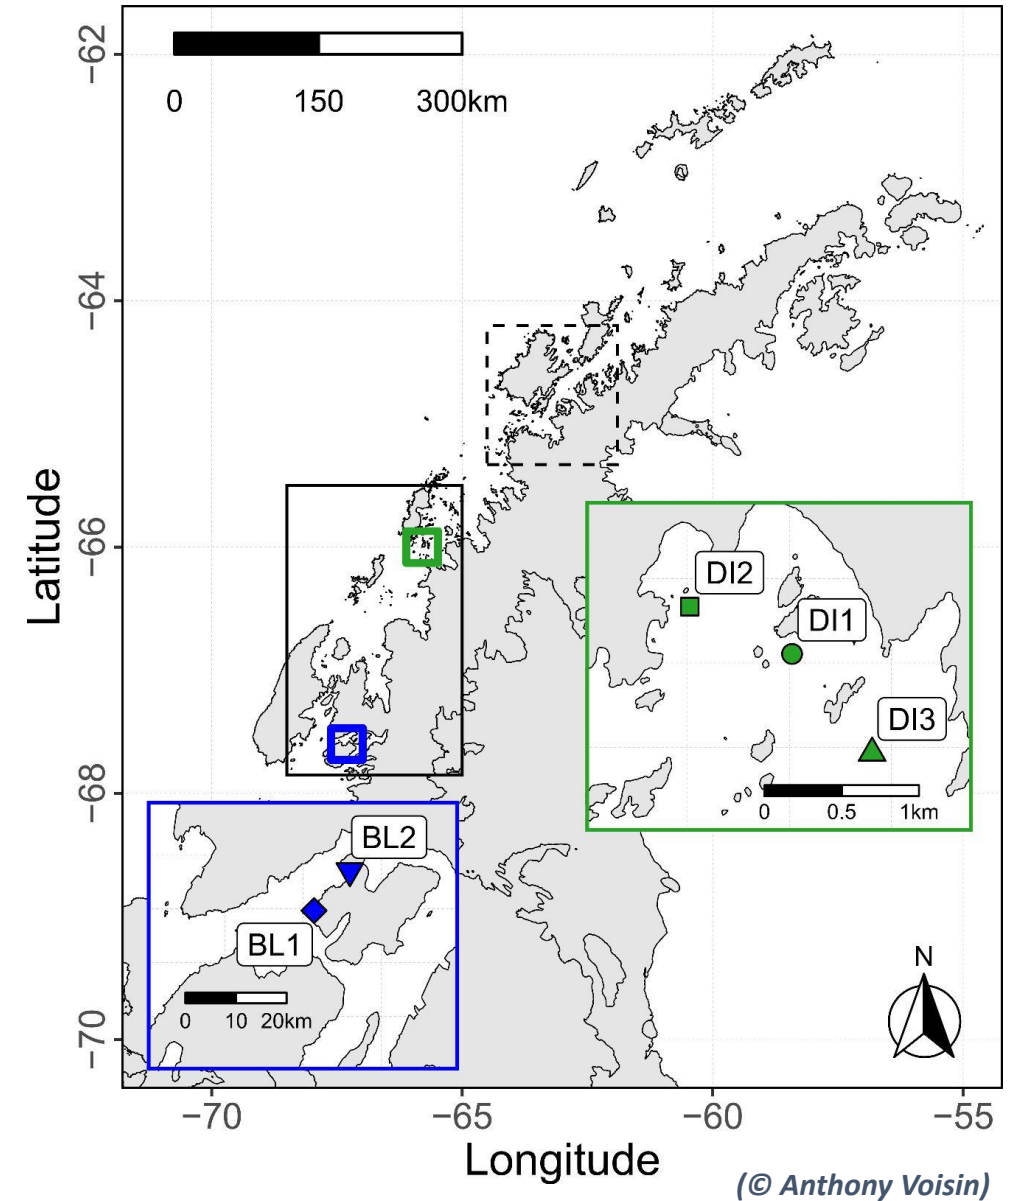

- Two macroalgae forests on rocky bottom
 - DI1 & ▲ DI3
- One soft-bottom community
 - DI2

□ Blaiklock Island:

- One soft-bottom community
 - ◆ BL1
- One rocky slope sparsely covered with algae
 - ▼ BL2

□ Potential sampling area for the 2024 expedition:
Lemaire Channel & Gerlache Strait

TANGO 2023 sampling stations

5) Communities sampled

A. Large-scale variability

Dodman Island:

- Biomass dominated by filter feeders and scavengers / predators
- Presence of dense and diverse macroalgae forests

Dendrilla antarctica

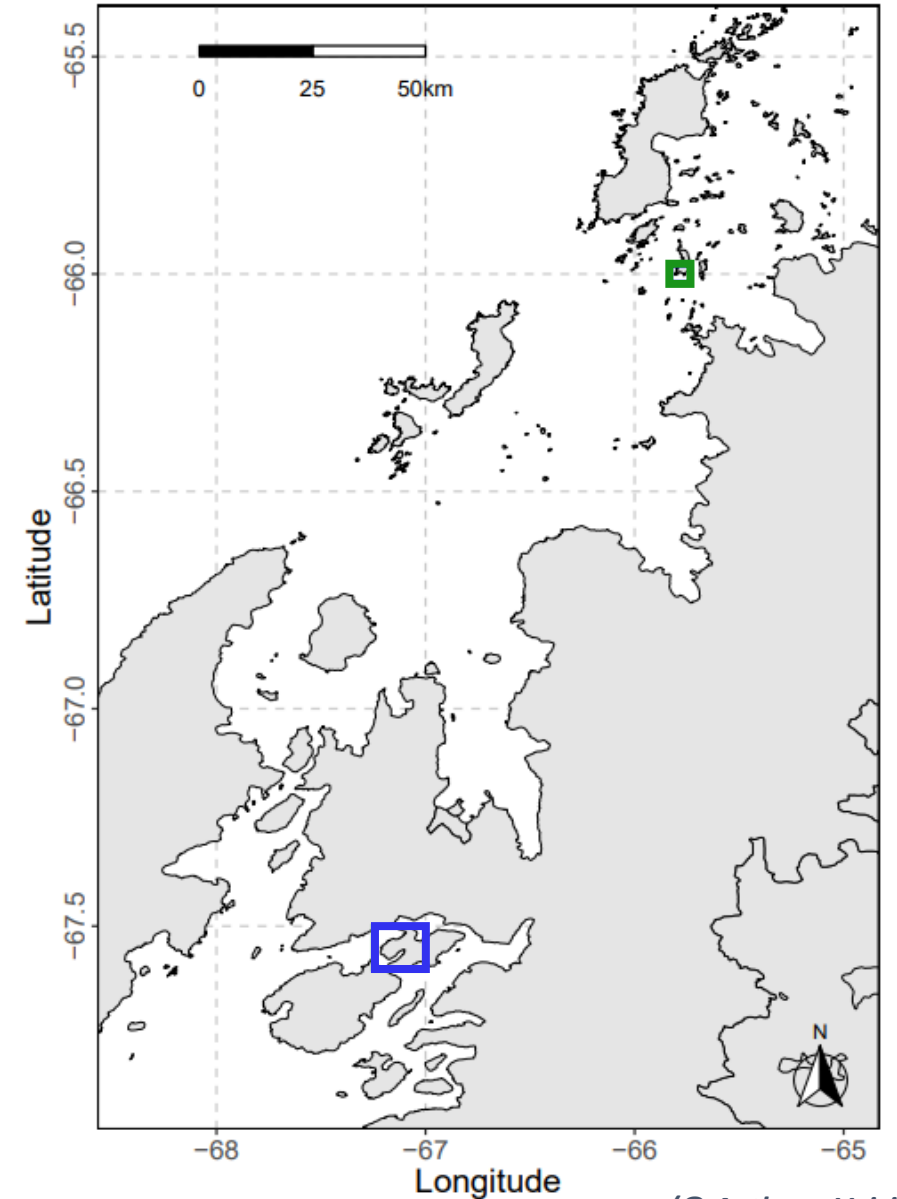

Cnemidocarpa verrucosa

Parborlasia corrugatus

TANGO 2023 sampling locations

(© Anthony Voisin)

5) Communities sampled

A. Large-scale variability

□ Blaiklock Island:

- Switch to a dominance of deposit and passive suspension feeders
- Near-disappearance of the macroalgae cover

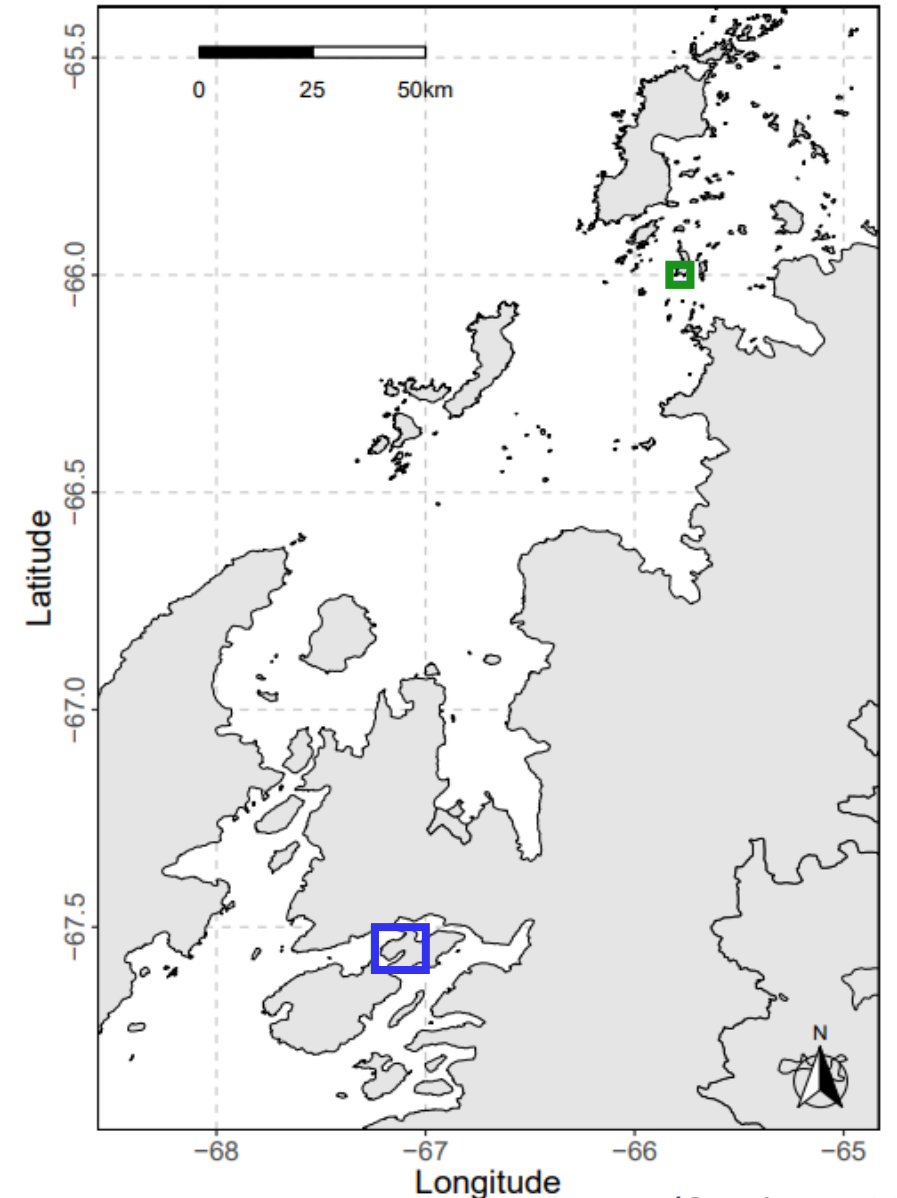

Ophionotus victoriae

Staurocucumis turqueti &
Heterocucumis steineni

TANGO 2023 sampling locations

(© Anthony Voisin)

5) Communities sampled

B. Local variability – Dodman Island

- Change in the macroalgae cover
- Increased abundance & diversity of the invertebrates community

■ DI2

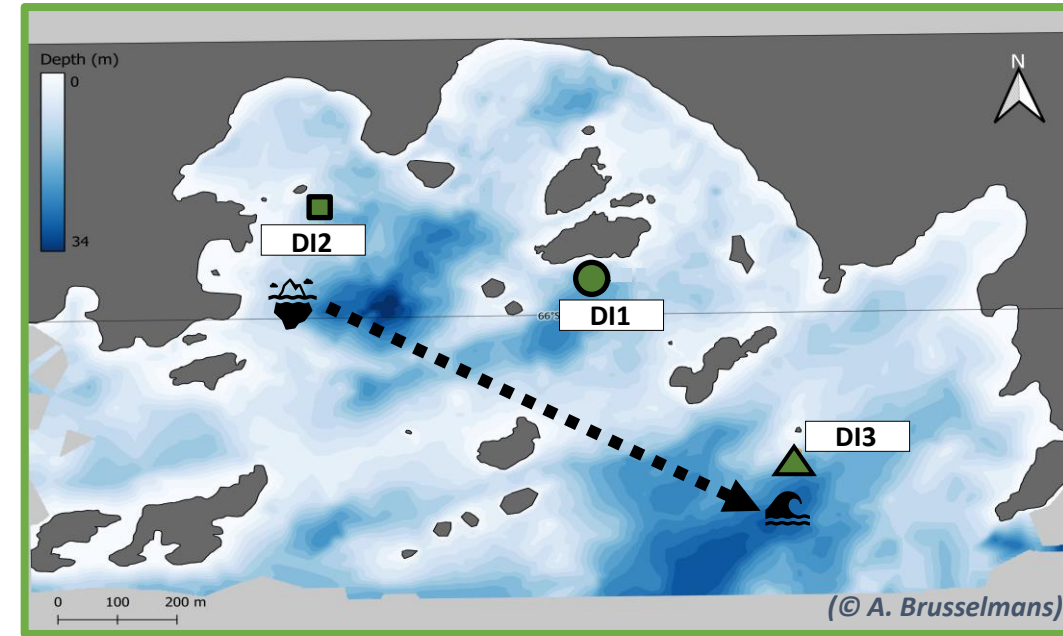

● DI1

▲ DI3

Bay of Dodman Island - Bathymetry

5) Communities sampled

B. Local gradients – Blaiklock Island

- Increase of the diversity & abundance of invertebrates
- More turbidity & finer sediments at the outlet of the fjord

Blaiklock Island – General map
