

# La technologie, une alliée précieuse pour une meilleure gestion des prairies

## Technology, a valuable ally for better pasture management

Kokah E. U.<sup>1</sup>, Ndong A.<sup>1</sup>, Bindelle J.<sup>1</sup>

<sup>1</sup>Precision Livestock and Nutrition Unit

### Aim:

To support farmers through technology in the management of their pastures in the face of climatic variations.

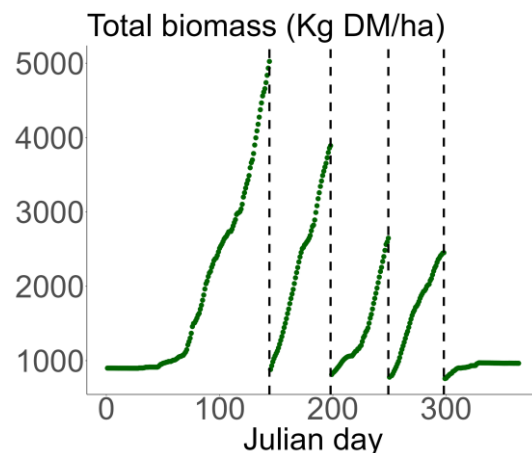

Monitoring the position and behavior of animals on the pasture with GPS collars

Monitoring vegetation development and condition through drone flights

Monitoring of grass growth and biomass accumulation through manual measurements

Modeling vegetation development under grazing or cutting conditions

### Conclusion:

The potential of technology at the service of farmers is important both to improve working conditions and to anticipate the effects of climate change on grasslands
