Devonian Miospore Palynology in Western Gondwana:

An application to oil exploration

Pierre Breuer
December 2007

Volume II: Figures & Appendices

TABLE OF CONTENTS

Volume I: Explanatory Notes

Volume II: Figures & Appendices

Volume III: Taxonomy

Fig. 1.1. Location of the studied sections.

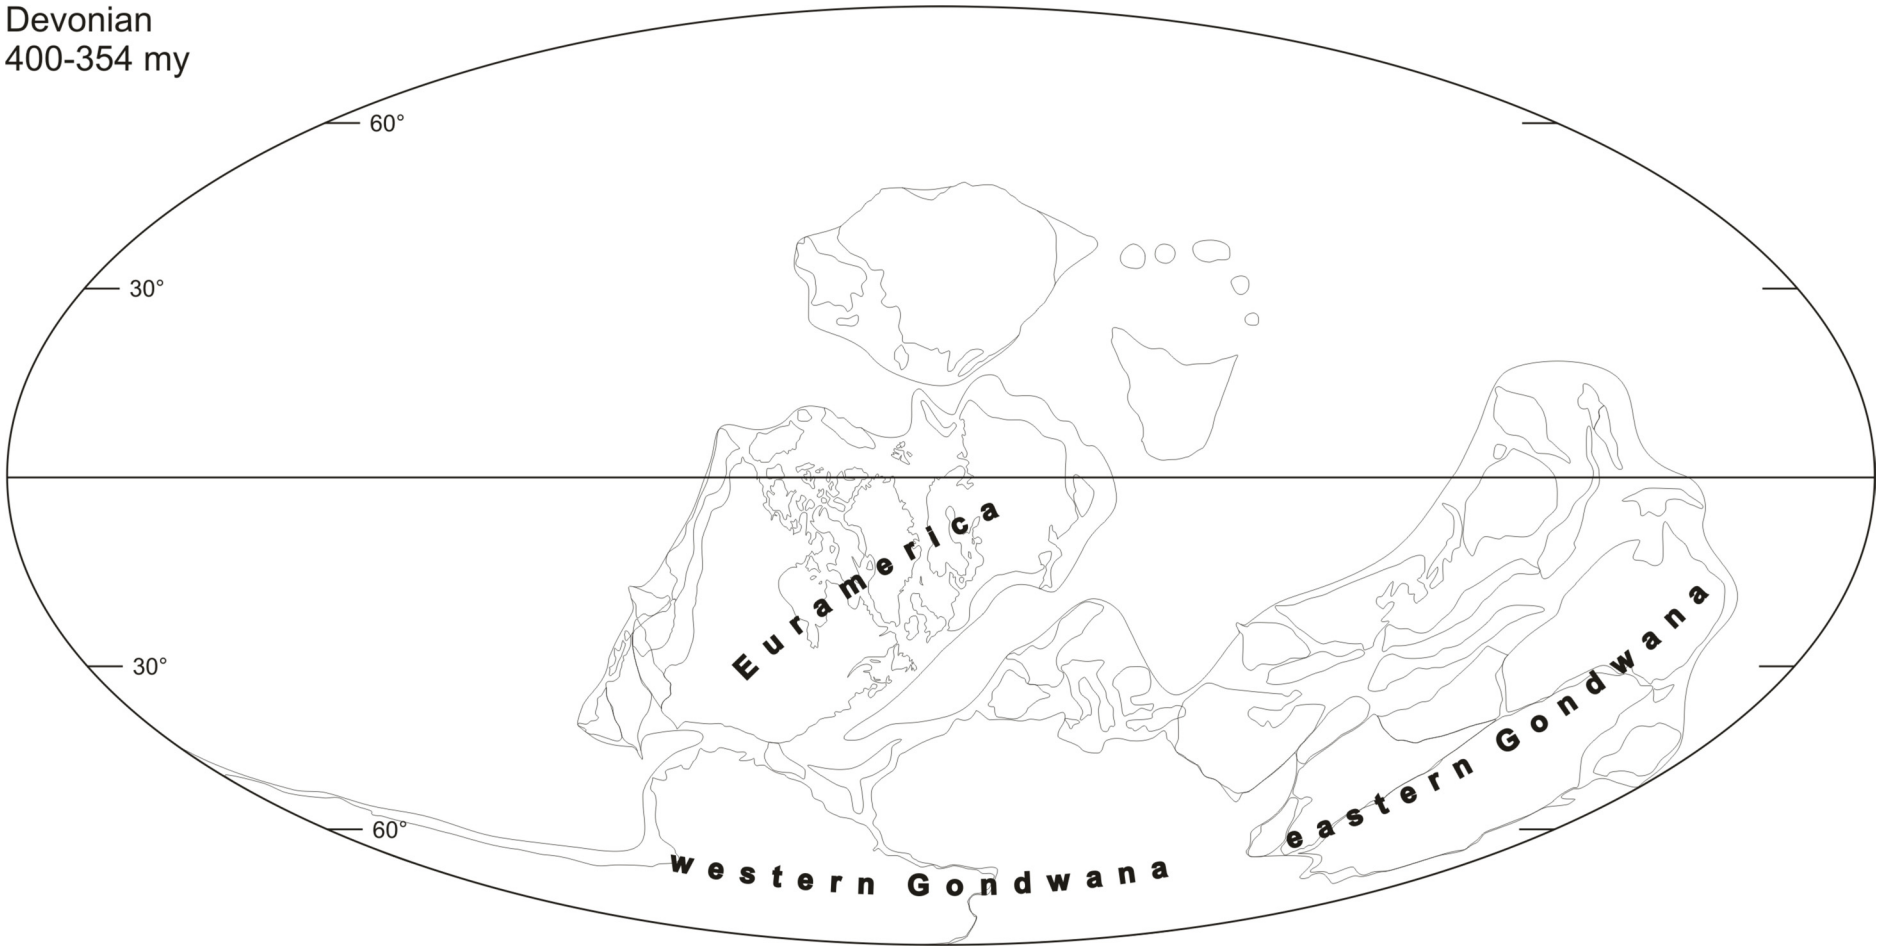

Fig. 1.2. Worldwide palaeogeographic reconstruction in the Devonian (modified after Scotese, 2000).

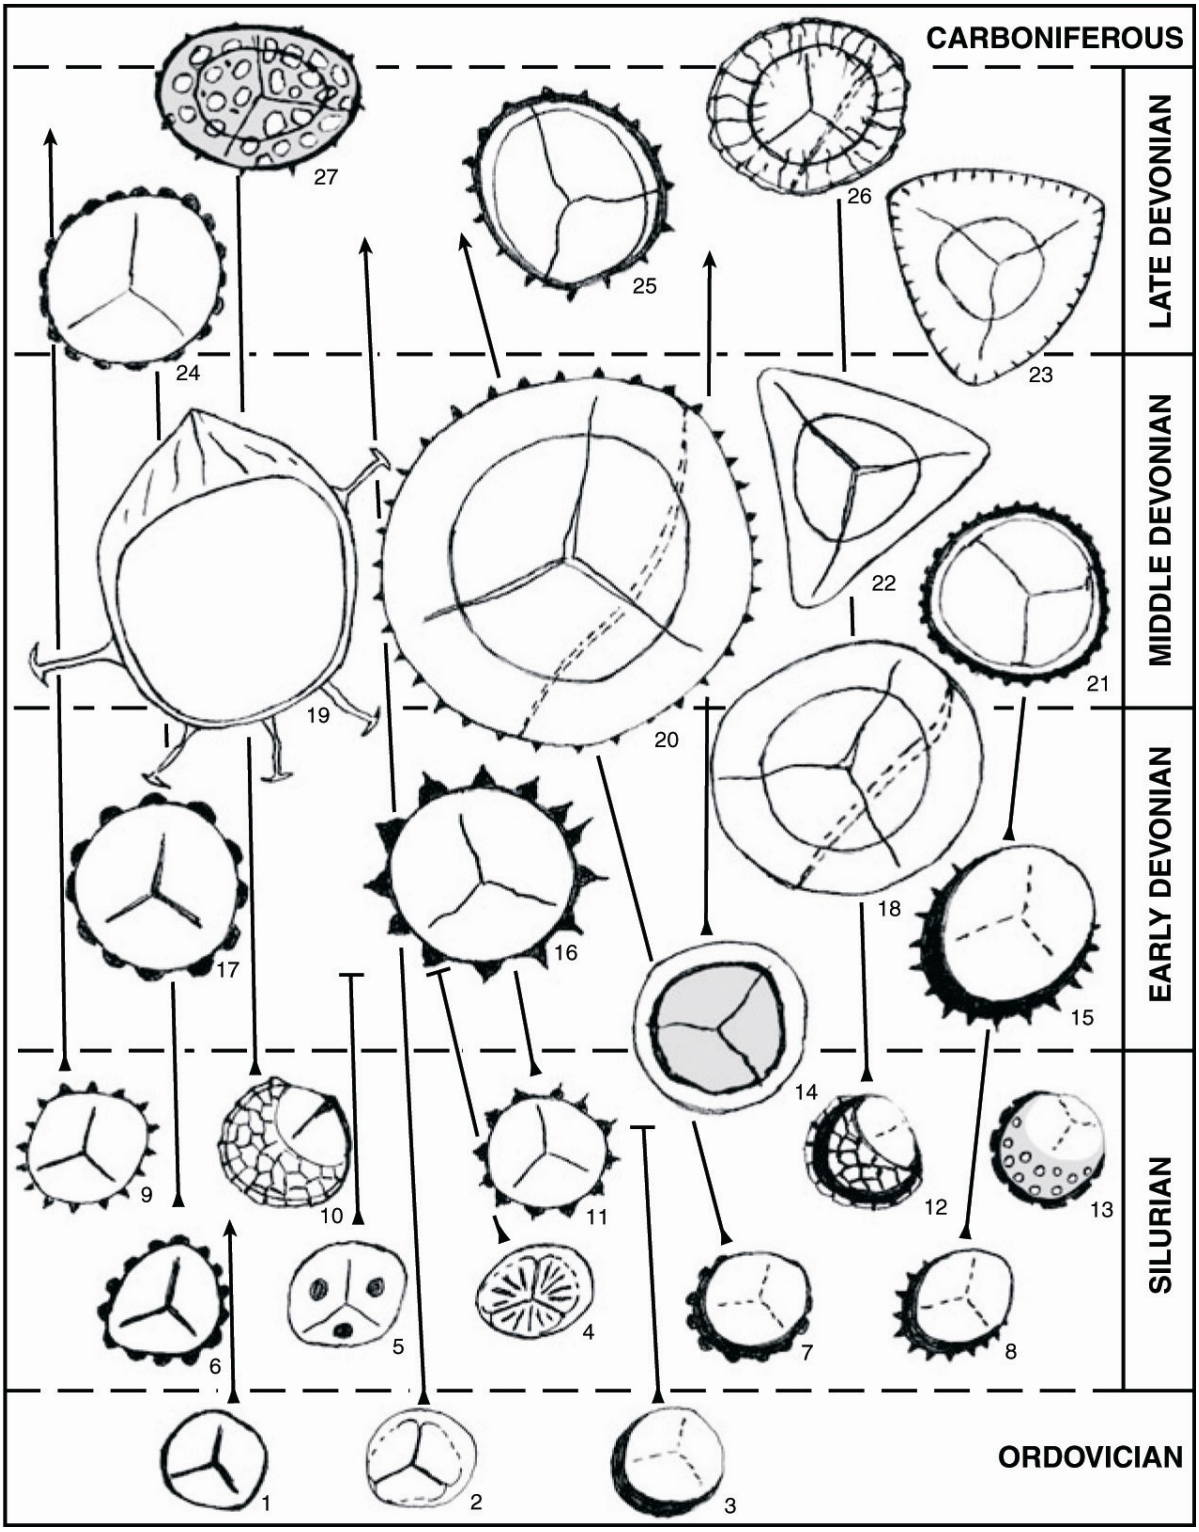

Fig. 1.3. Morphological trends of miospores from Ordovician to basal Carboniferous (Loboziak et al., 2005). 1: the first undoubted trilete mark at one pole; 2: haptotypic (linked to the tetrad status) proximo-subequatorial features (retusoid miospores); 3: distal thickening of the exine (patina);4: proximal radial muri; 5: interradial papillae; 6, 17 and 24: verrucate sculpture; 7: patinate verrucate sculpture; 8 and 15: patinate apiculate sculpture; 9: apiculate sculpture; 10: reticulate sculpture; 11 and 16: biform sculptural elements; 12: patinate reticulate sculpture; 13: patinate foveolate sculpture; 14: equatorial extension of an external layer of the exine, the sexine (acamerate); 18: two-layered zonate, camerate (cavity between the sexine and the inner layer, the nexine); 19: two-layered azonate with bifurcated spines; 20, 21 and 25: two-layered zonate, camerate, with apiculate sculpture; 22: two-layered zonate, acamerate; 23: two-layered zonate, camerate, endoreticulate; 26: three-layered zonate, camerate; 27: two-layered zonate, camerate, with apiculate, reticulate sculpture.

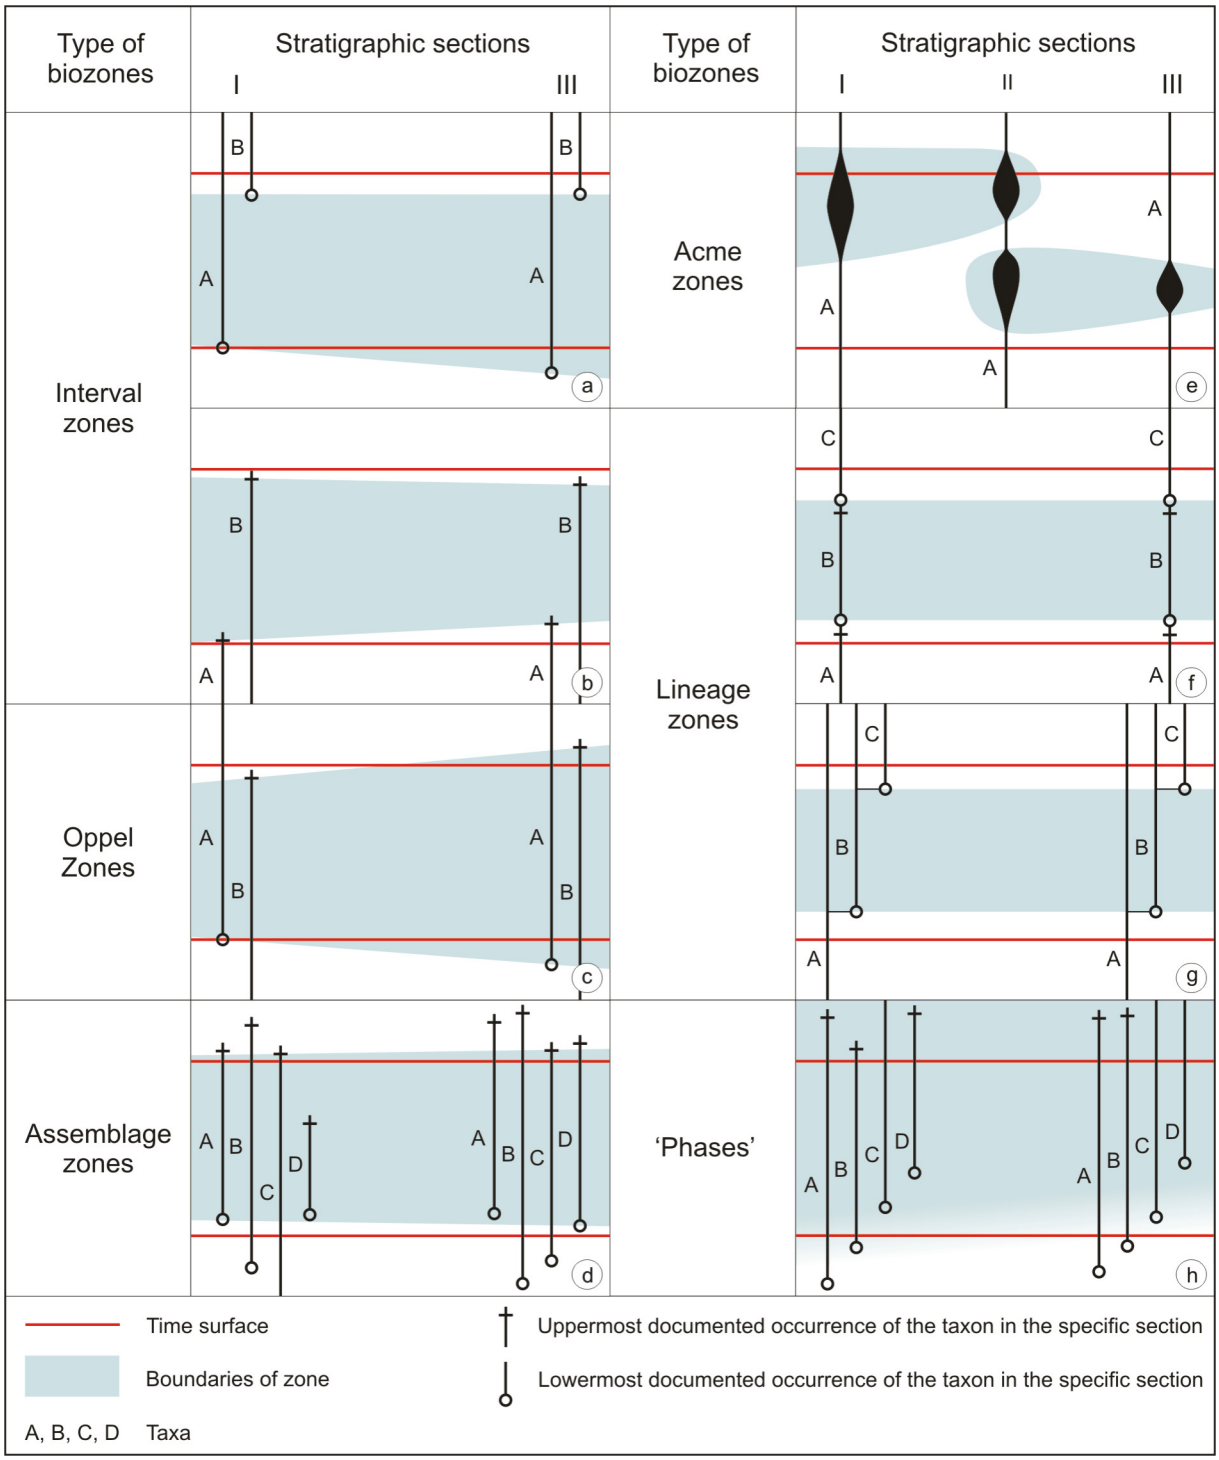

Fig. 1.4. Types of biozones mainly used in palynological studies (partly inspired from Salvador, 1994). a: the 'lowest-occurrence zone' represents the range between the lowest occurrence of taxa A and B; b: the 'highest-occurrence zone' represents the range between the highest occurrence of taxa A and B; c: the lowest boundary of the zone is the lowermost occurrence of taxon A and the upper boundary is the highest occurrence of taxon B; d: the assemblage diagnostic of the zone include four taxa with diverse stratigraphic ranges, the lower boundary is placed at the lowermost occurrence of index taxa A or D and the upper boundary at the highest occurrence of taxon C; e: the abundance zone represents the range of taxon A where it is the most abundant; f: the lineage zone represents the entire range of taxon B, from the highest occurrence of its ancestor, taxon B; g: the lineage zone represents the part of the range of taxon B between its lowest occurrence and the lowest occurrence of its descendant, taxon C; h: the lowermost boundary is fuzzy because the emphasis is on gradual development over time of the assemblage.

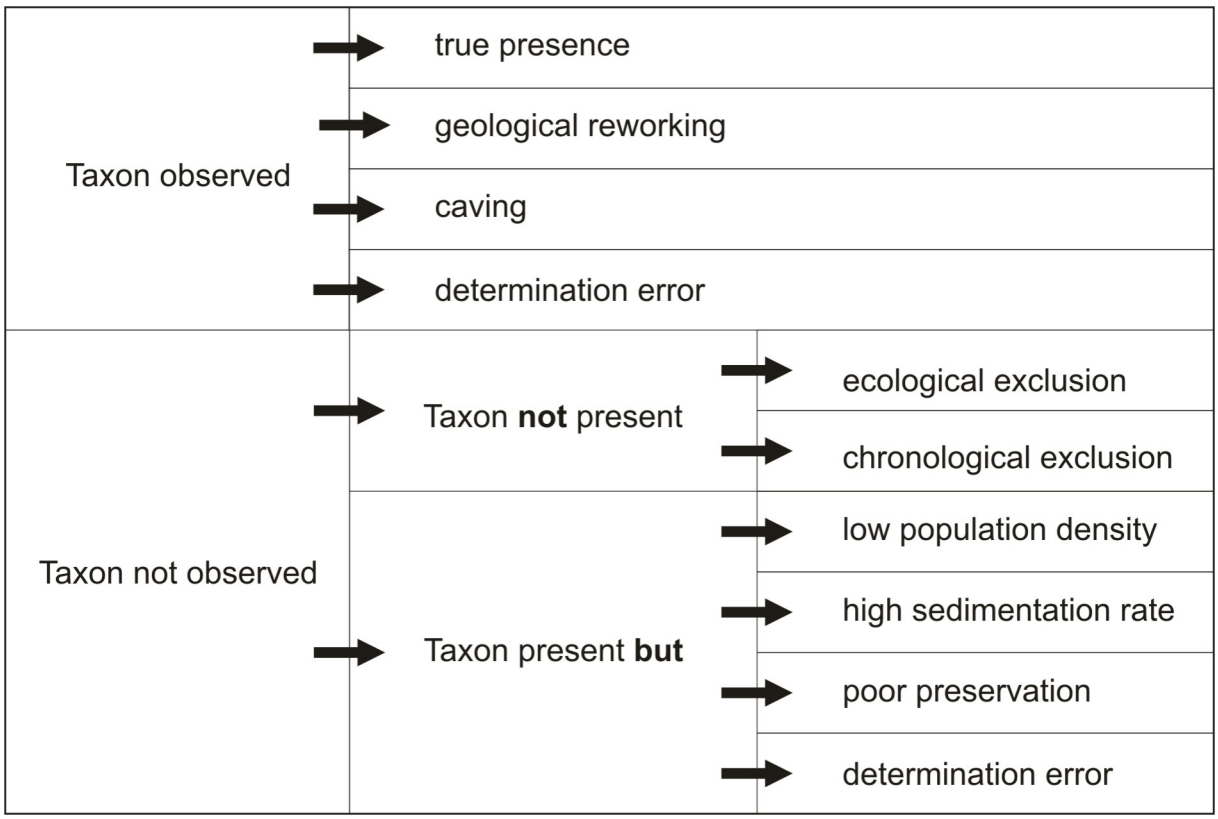

Fig. 1.5. Factors bearing on the quality of the fossil record (modified after Gradstein et al., 1985). The presence or absence of a taxon depend on multiple factors.

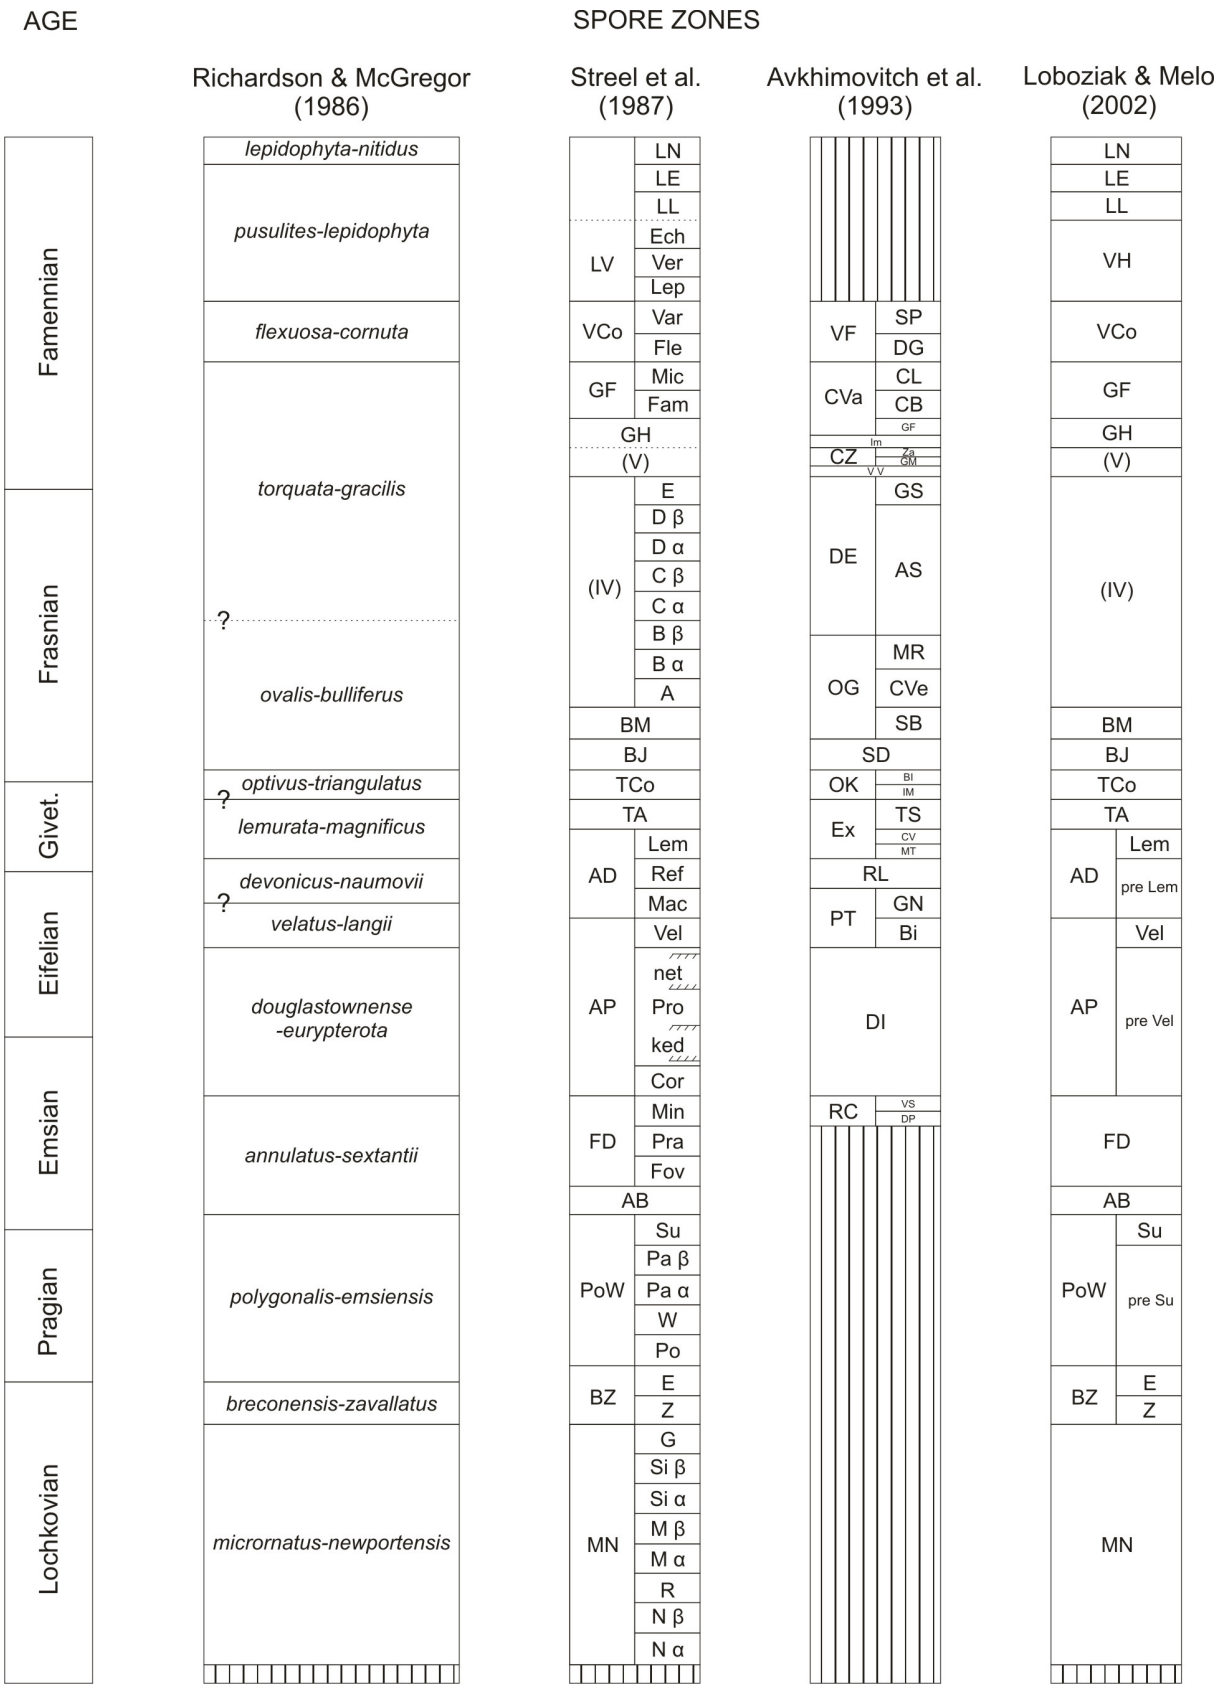

Fig. 1.6. Comparisons between the most significant Devonian miospore zonations established in Euramerica (Richardson & McGregor, 1986; Streel et al., 1987; Avkimovitch et al., 1993) and western Gondwana (Loboziak & Melo, 2002).

Fig. 2.1. Main sedimentary basins and regional tectonic structure of the Arabian Plate. Basement and Palaeozoic outcrops are shown by various colours.

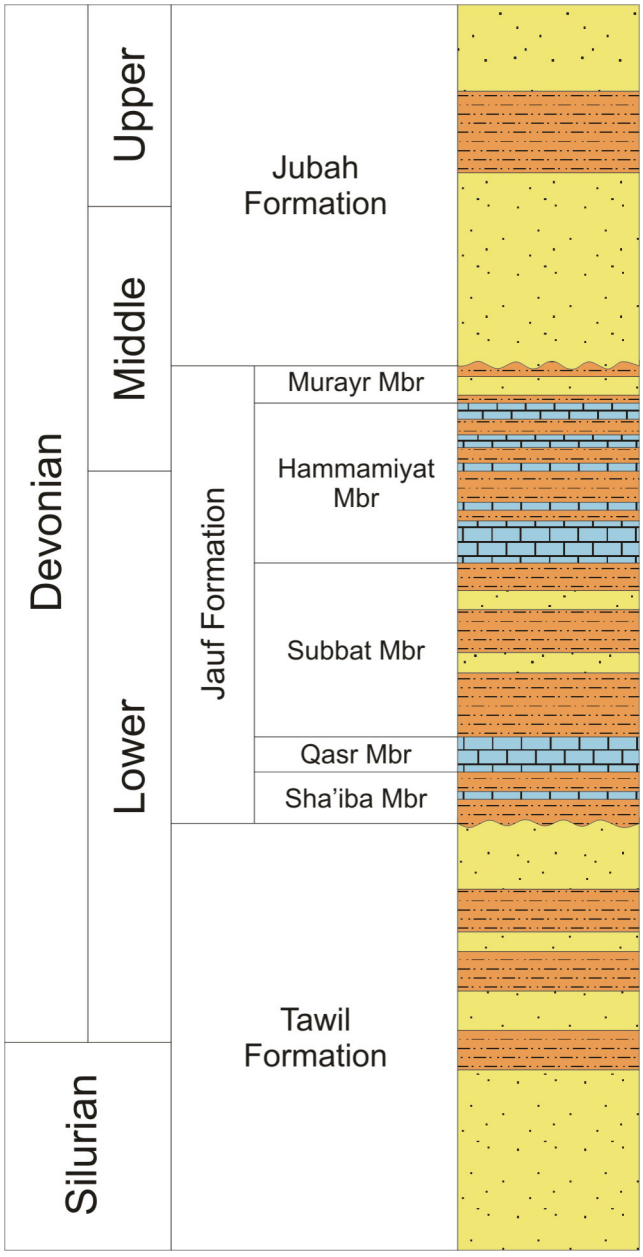

Fig. 2.2. Generalized lithostratigraphy of Devonian section of northwestern Saudi Arabia (modified after Al-Hajri et al., 1999).

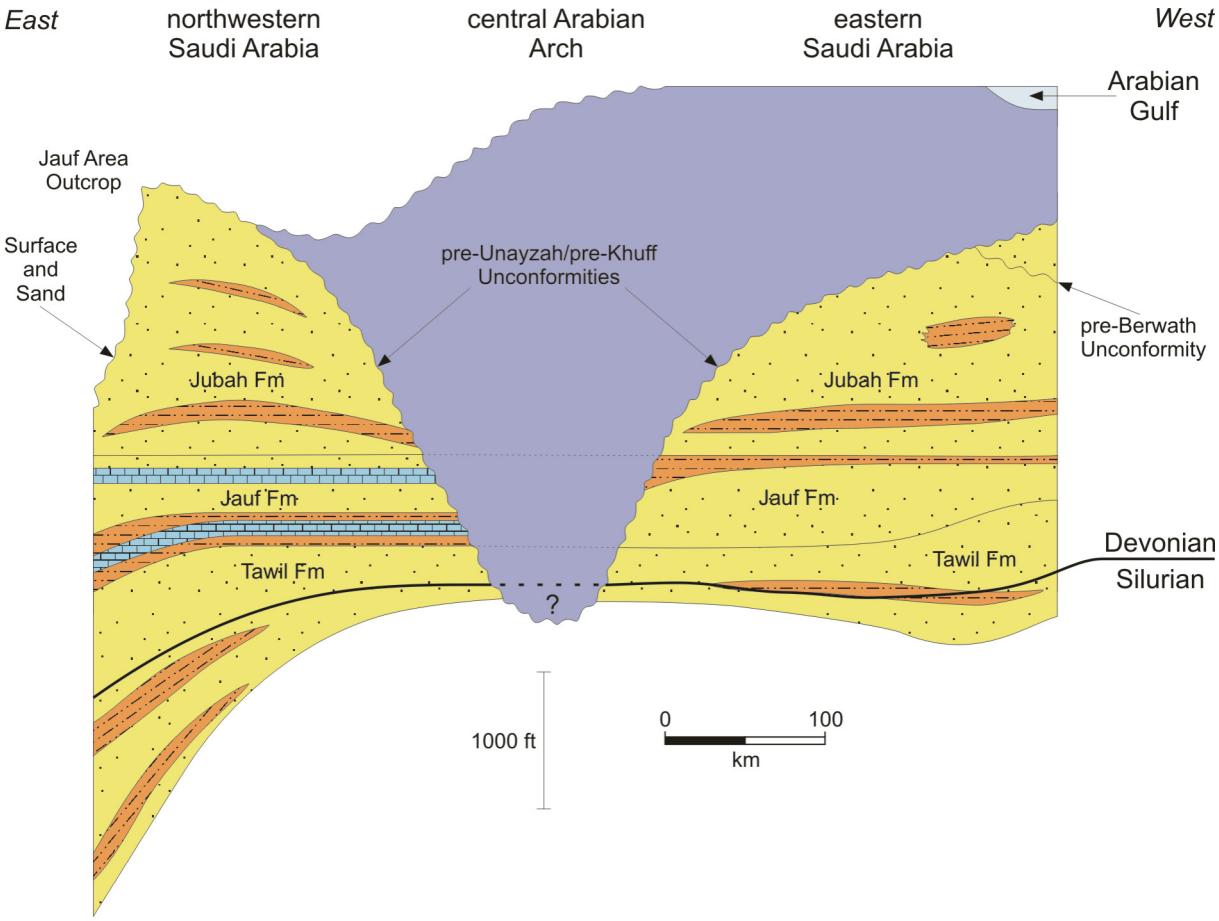

Fig. 2.3. Regional Devonian schematic cross-section (modified after Al-Hajri et al., 1999).

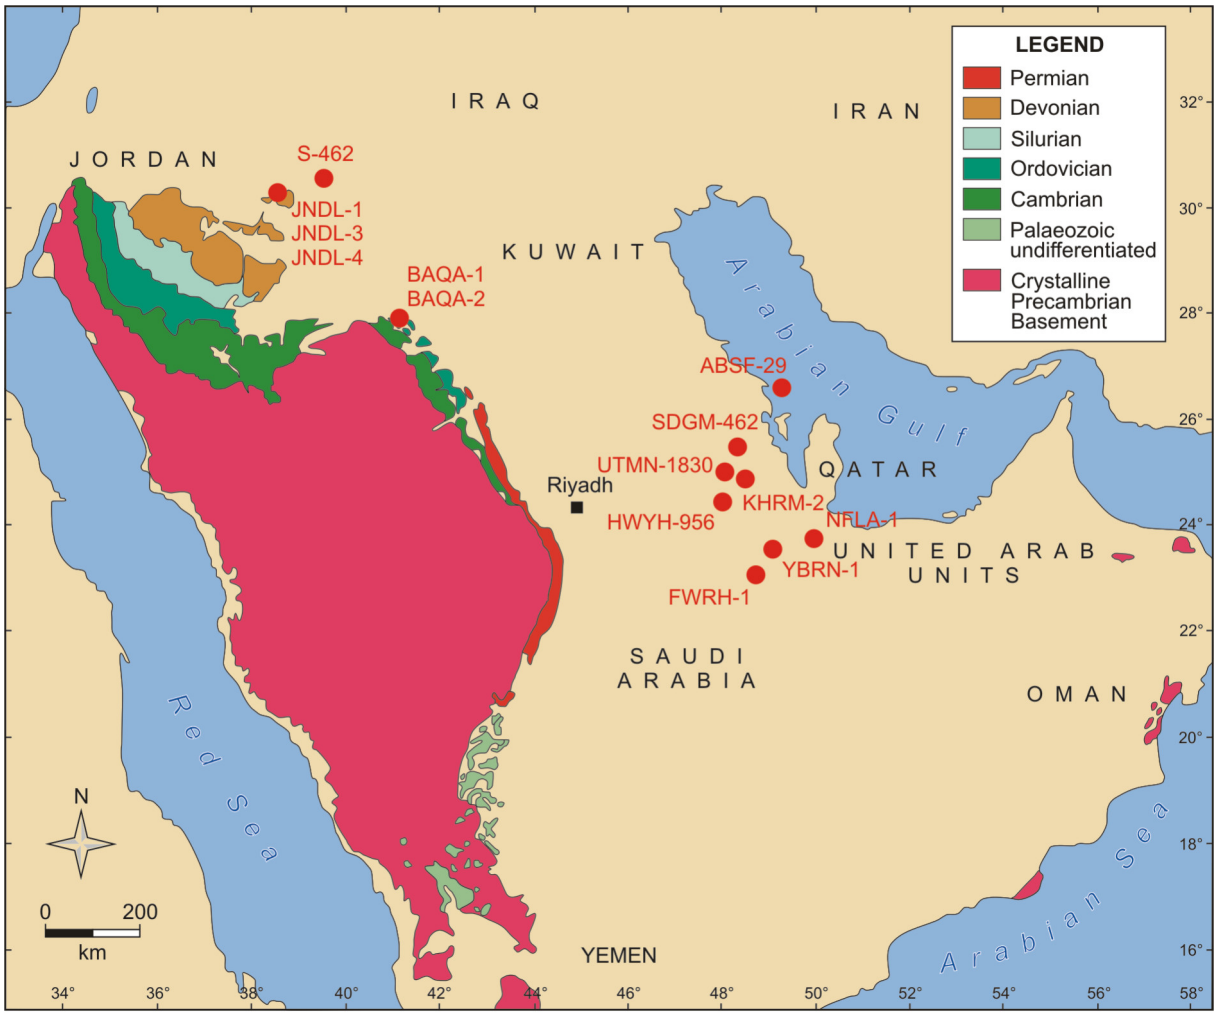

Fig. 2.4. Location of studied boreholes/wells on the Arabian Peninsula. Basement and Palaeozoic outcrops are shown by various colours.

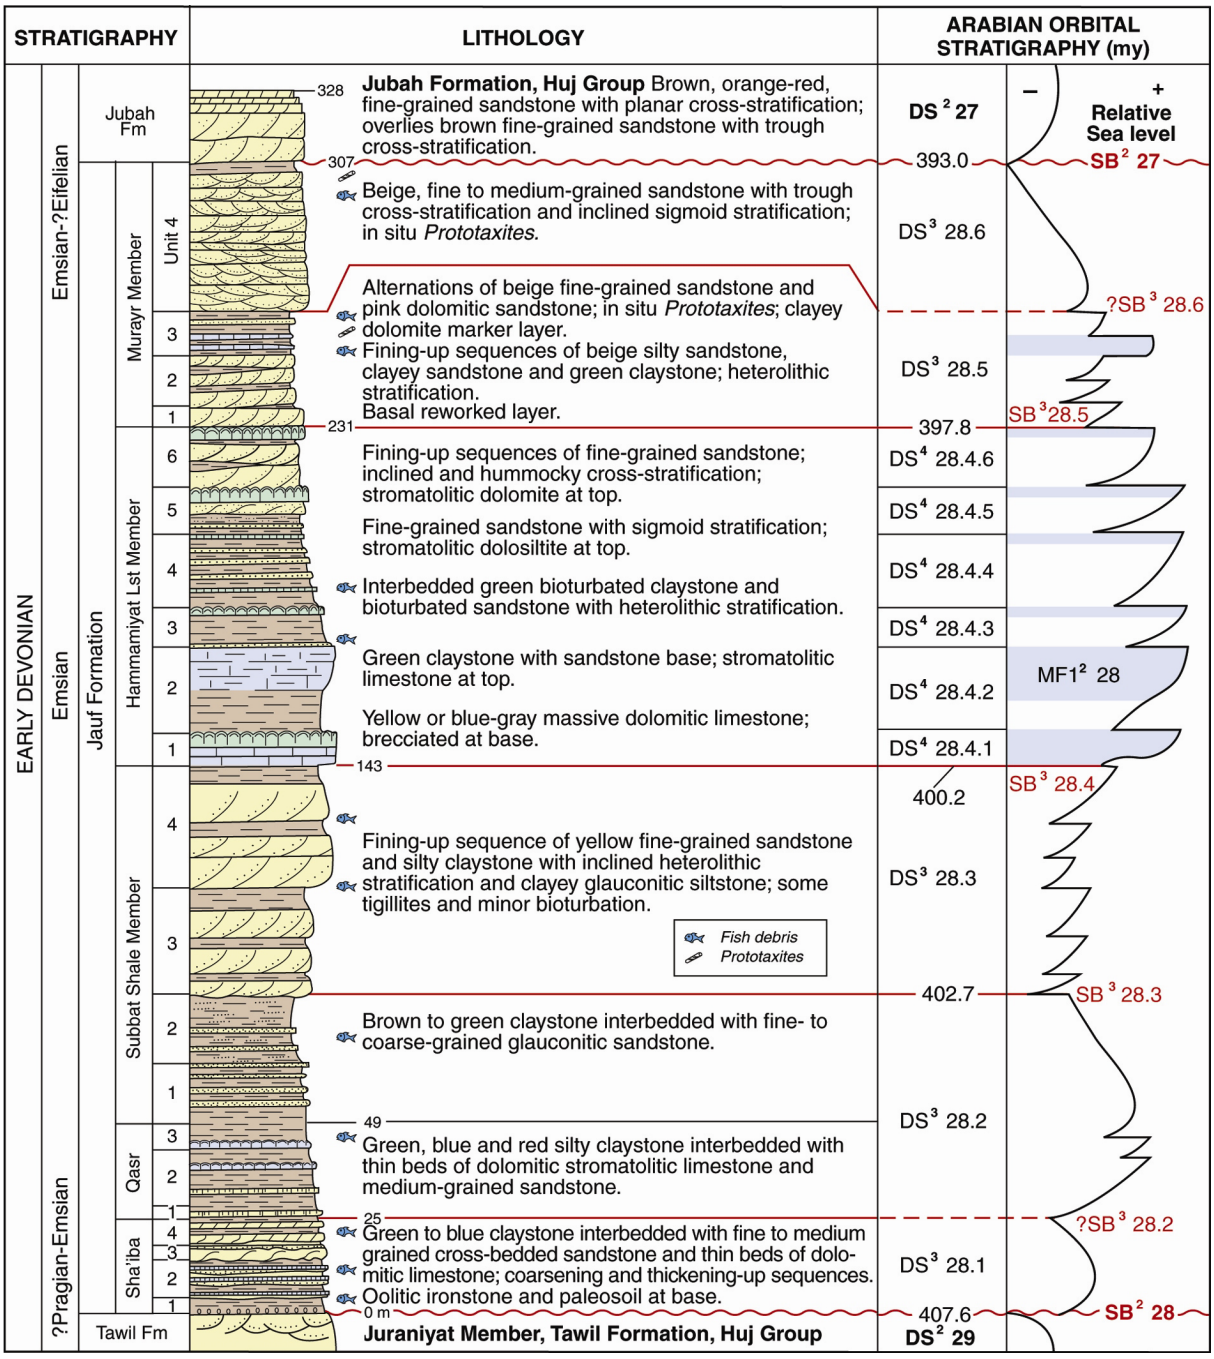

Fig. 2.5. Reference section of the Jauf Formation in the Al Qalibah quadrangle (modified after Al-Husseini & Matthews, 2006). The Jauf Formation consists of 21 informal units in the Al Qalibah quadrangle. The Jauf Formation is interpreted as second-order depositional sequence DS^2 28 that is bounded by SB^2 28 (407.6 my) = Jauf/Tawil and SB^2 27 (393.0 my) = Jubah/Jauf (Al-Husseini & Matthews, 2005). Biostratigraphic dating in Al-Hajri et al. (1999) approximately places the Jubah/Jauf boundary at late Emsian-early Eifelian and the lower Jubah at late Eifelian. The Jauf Formation manifests several aspects of a model DS^2 including six possible third-order cycles (DS^3 28.1 to 28.6) that are separated by five third-order sequence boundaries (SB^3 28.2 to 28.6). The Hammamiyat Member contains the maximum flooding interval ($MF1^2$ 28 in Hammamiyat unit 2). It forms a 'nominal' third-order sequence (Matthews & Frohlich, 2002), denoted DS2 28.4, that consists of six fourth-order sequences (DS^4 28.4.1 to 28.4.6 = Hammamiyat units 1-6), each deposited in 0.405 my.

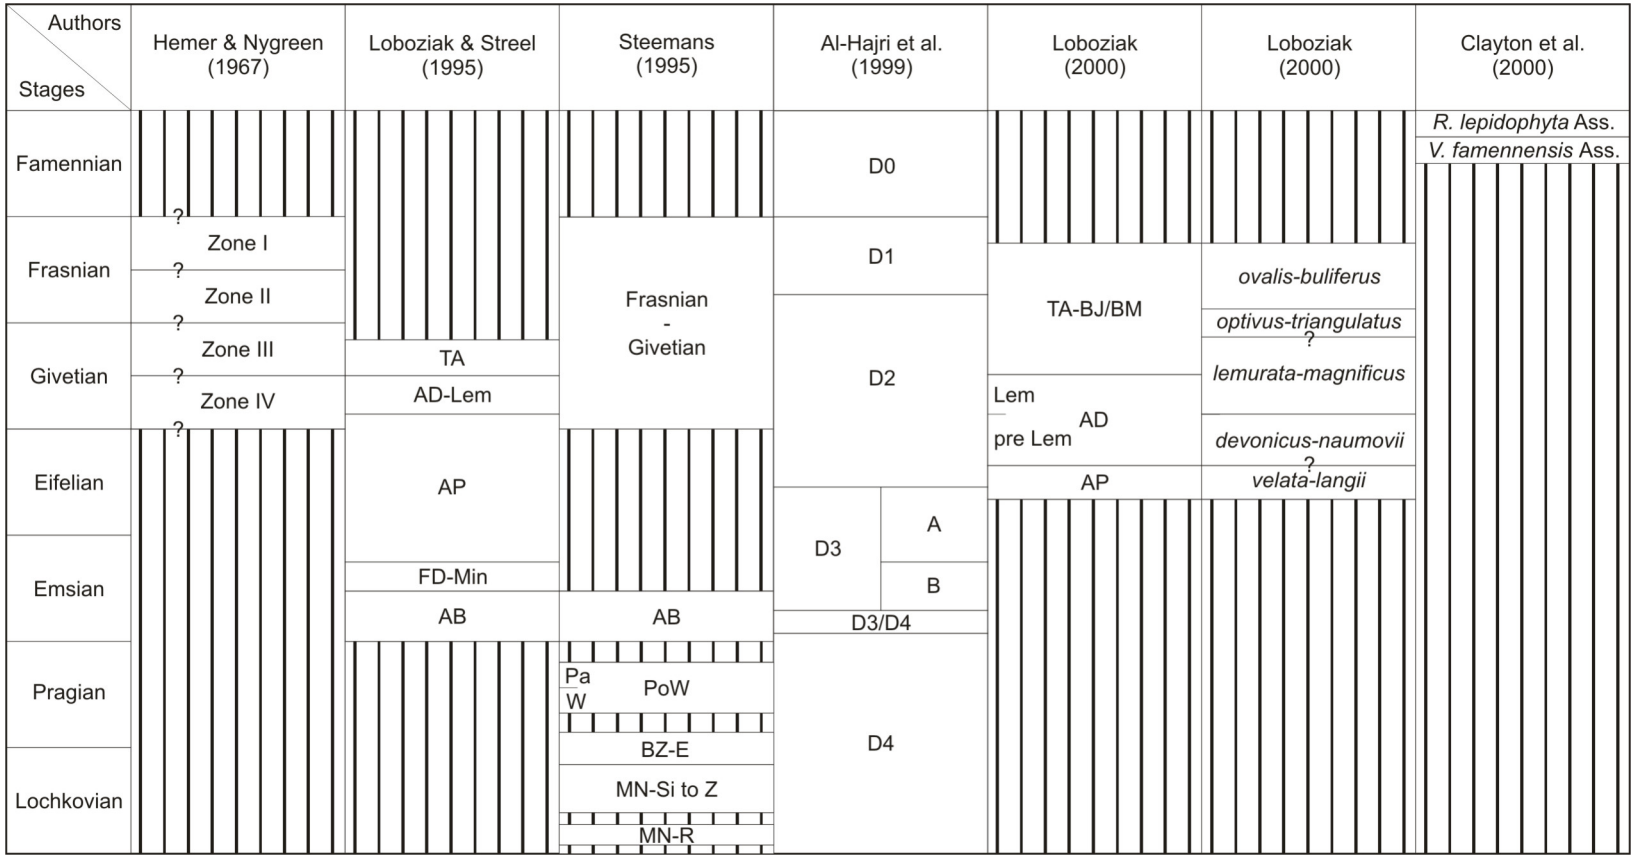

Fig. 2.6. Chart comparing biozonation from the main studies on Devonian from Saudi Arabia. Loboziak & Streel (1995), Steemans (1995) and Loboziak (2000) used biozonation of Streel et al. (1987). In addition, Loboziak used also biozonation of Richardson & McGregor (1986).

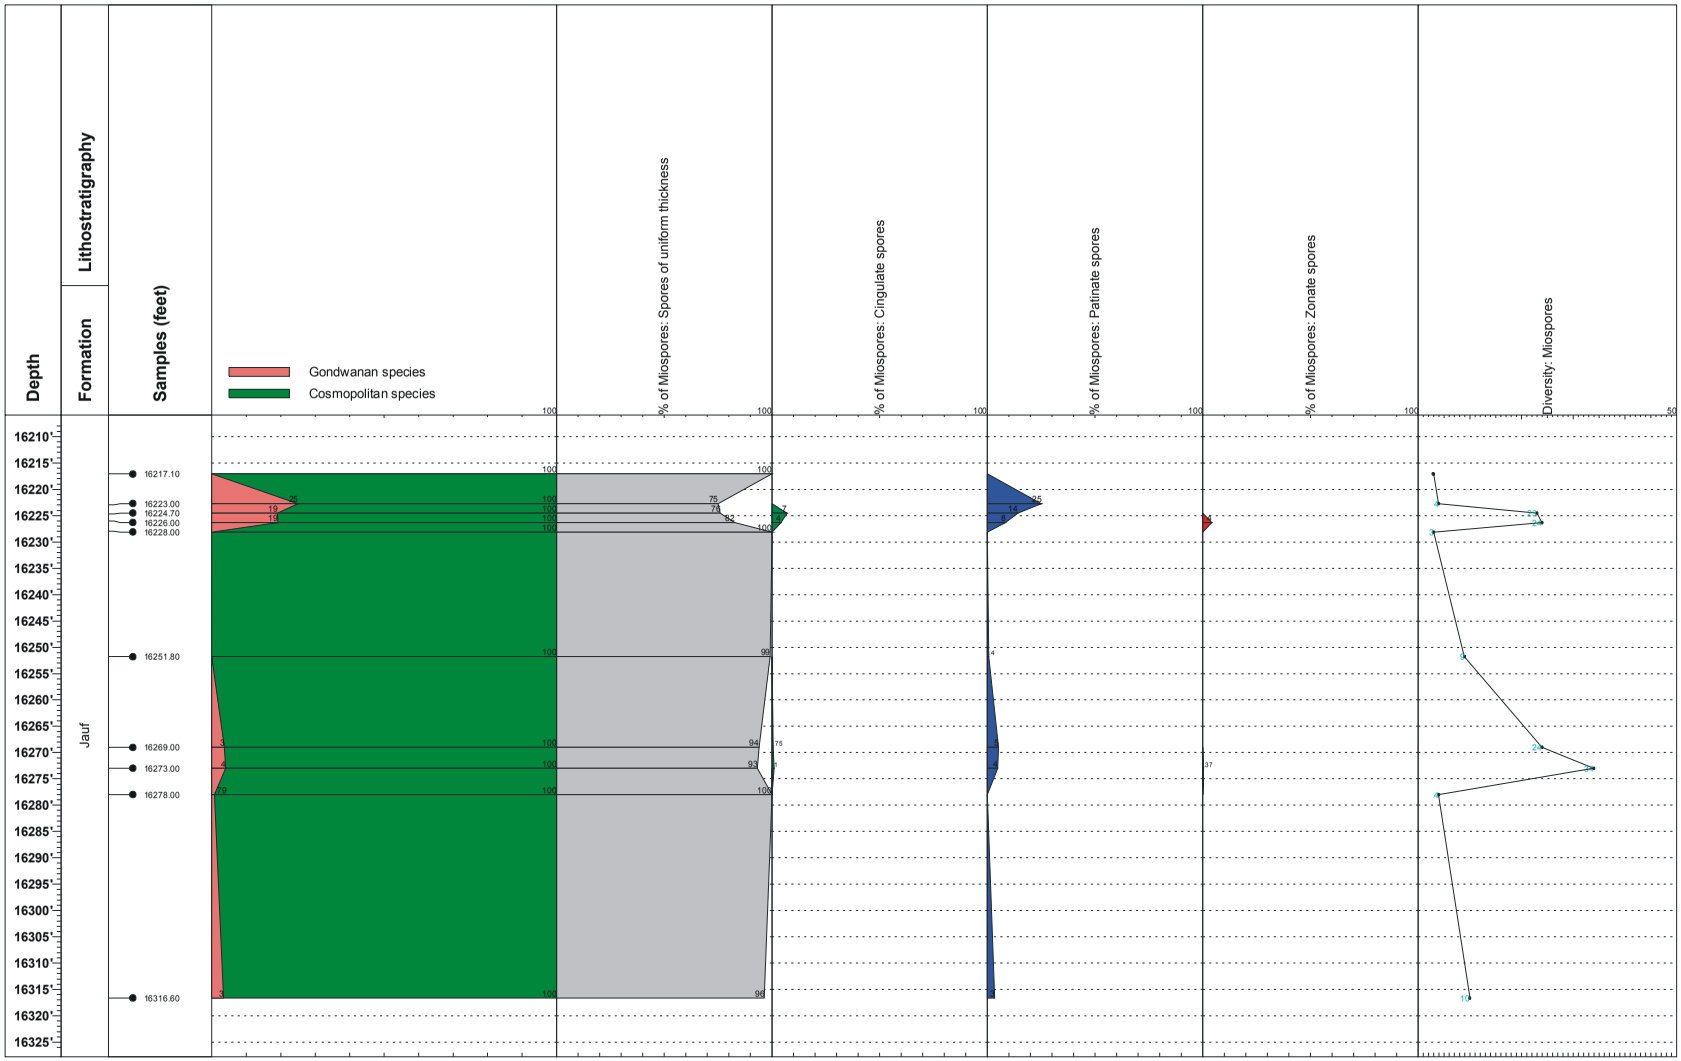

Fig. 2.48. Relative abundance of the miospore groups according to their palaeogeographic affinity in well KHRM-2 on the left and relative abundance of the different miospore structure groups.

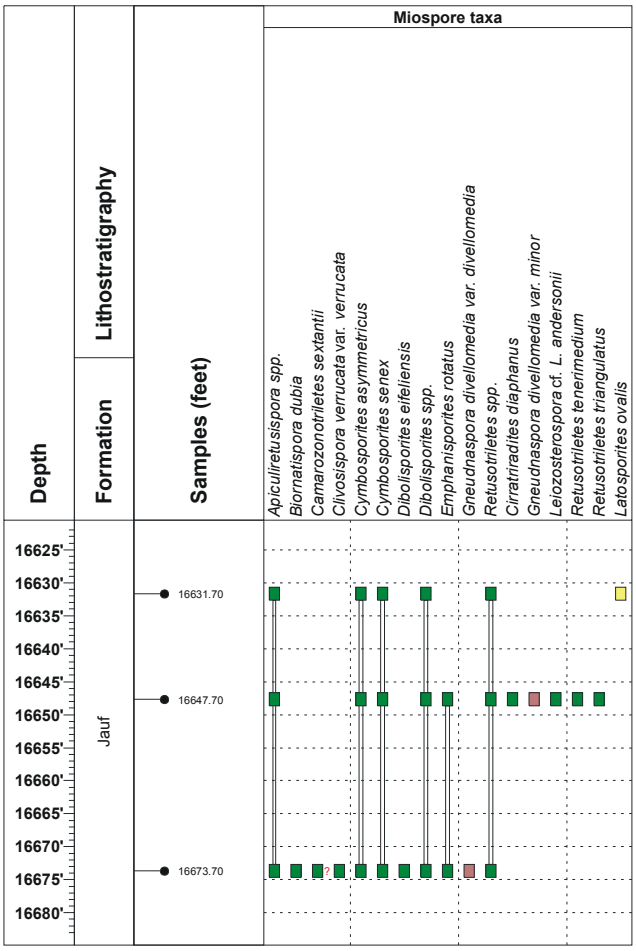

Fig. 2.49. Stratigraphic ranges of miospores encountered in well NFLA-1.

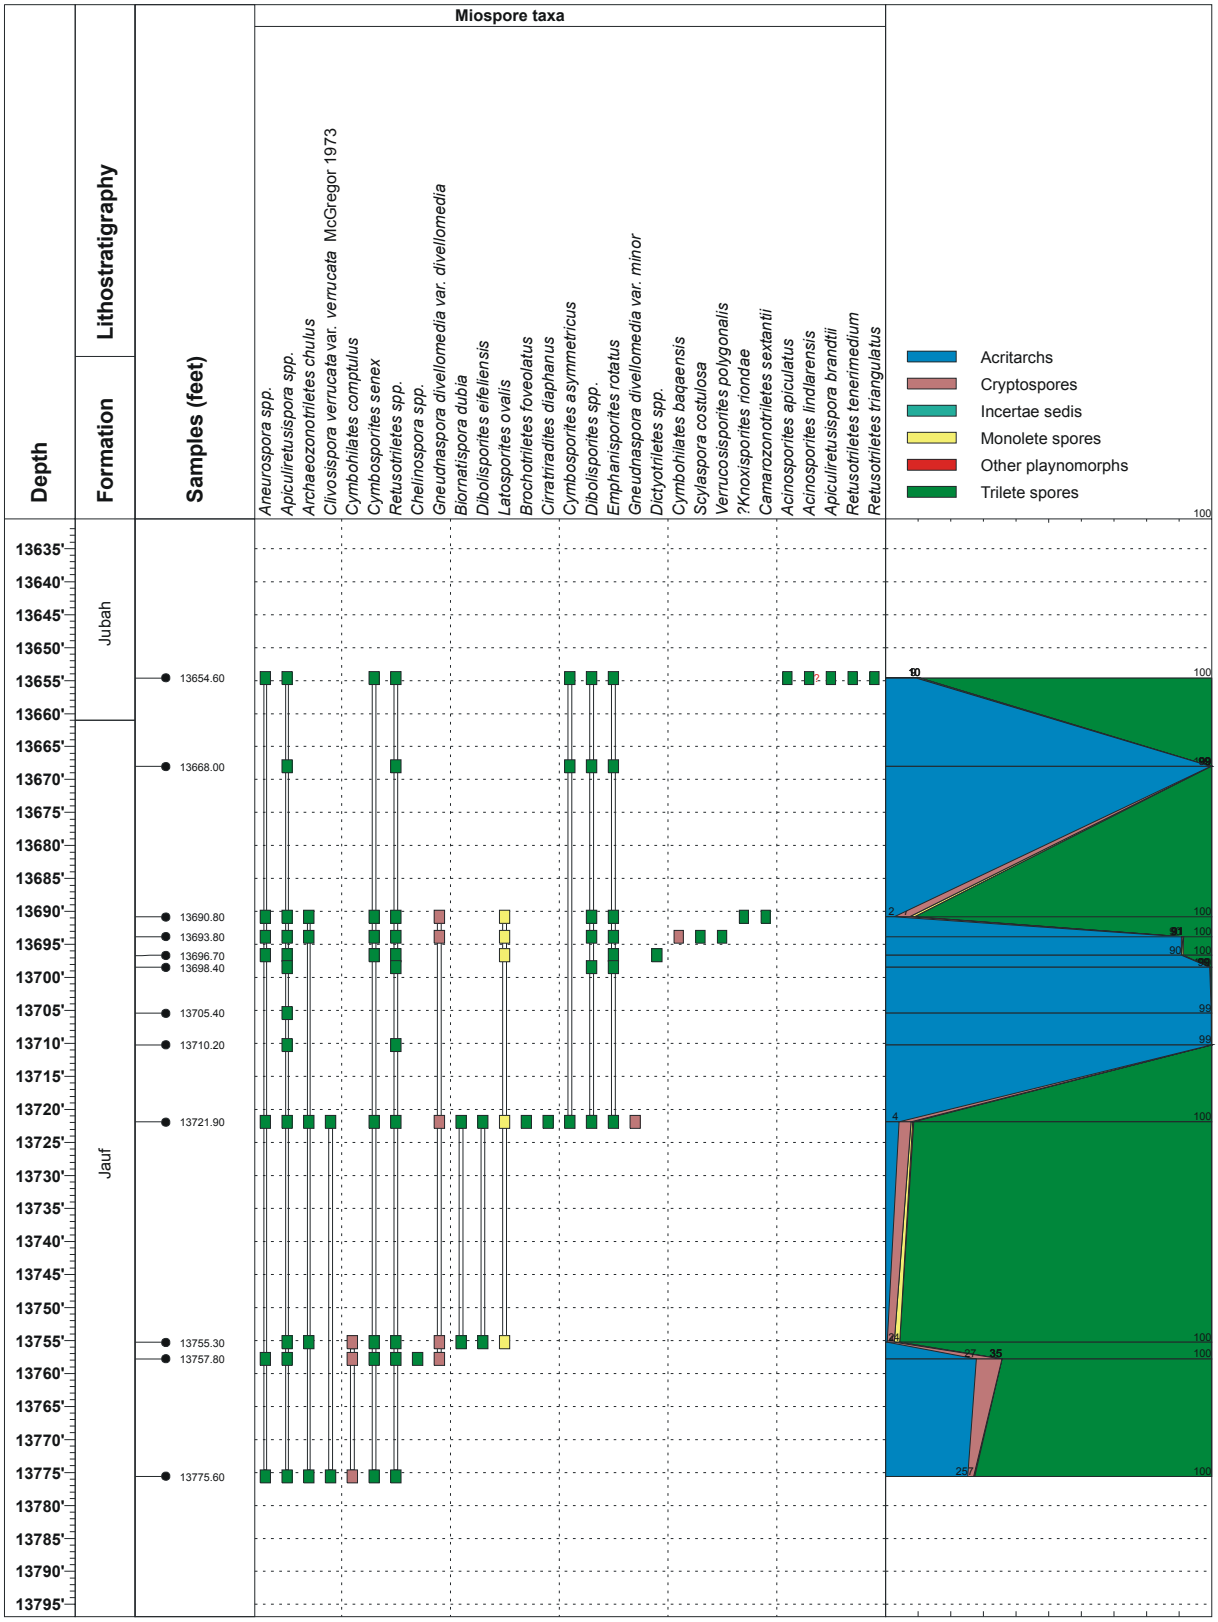

Fig. 2.50. Stratigraphic ranges of miospores encountered in well SDGM-462.

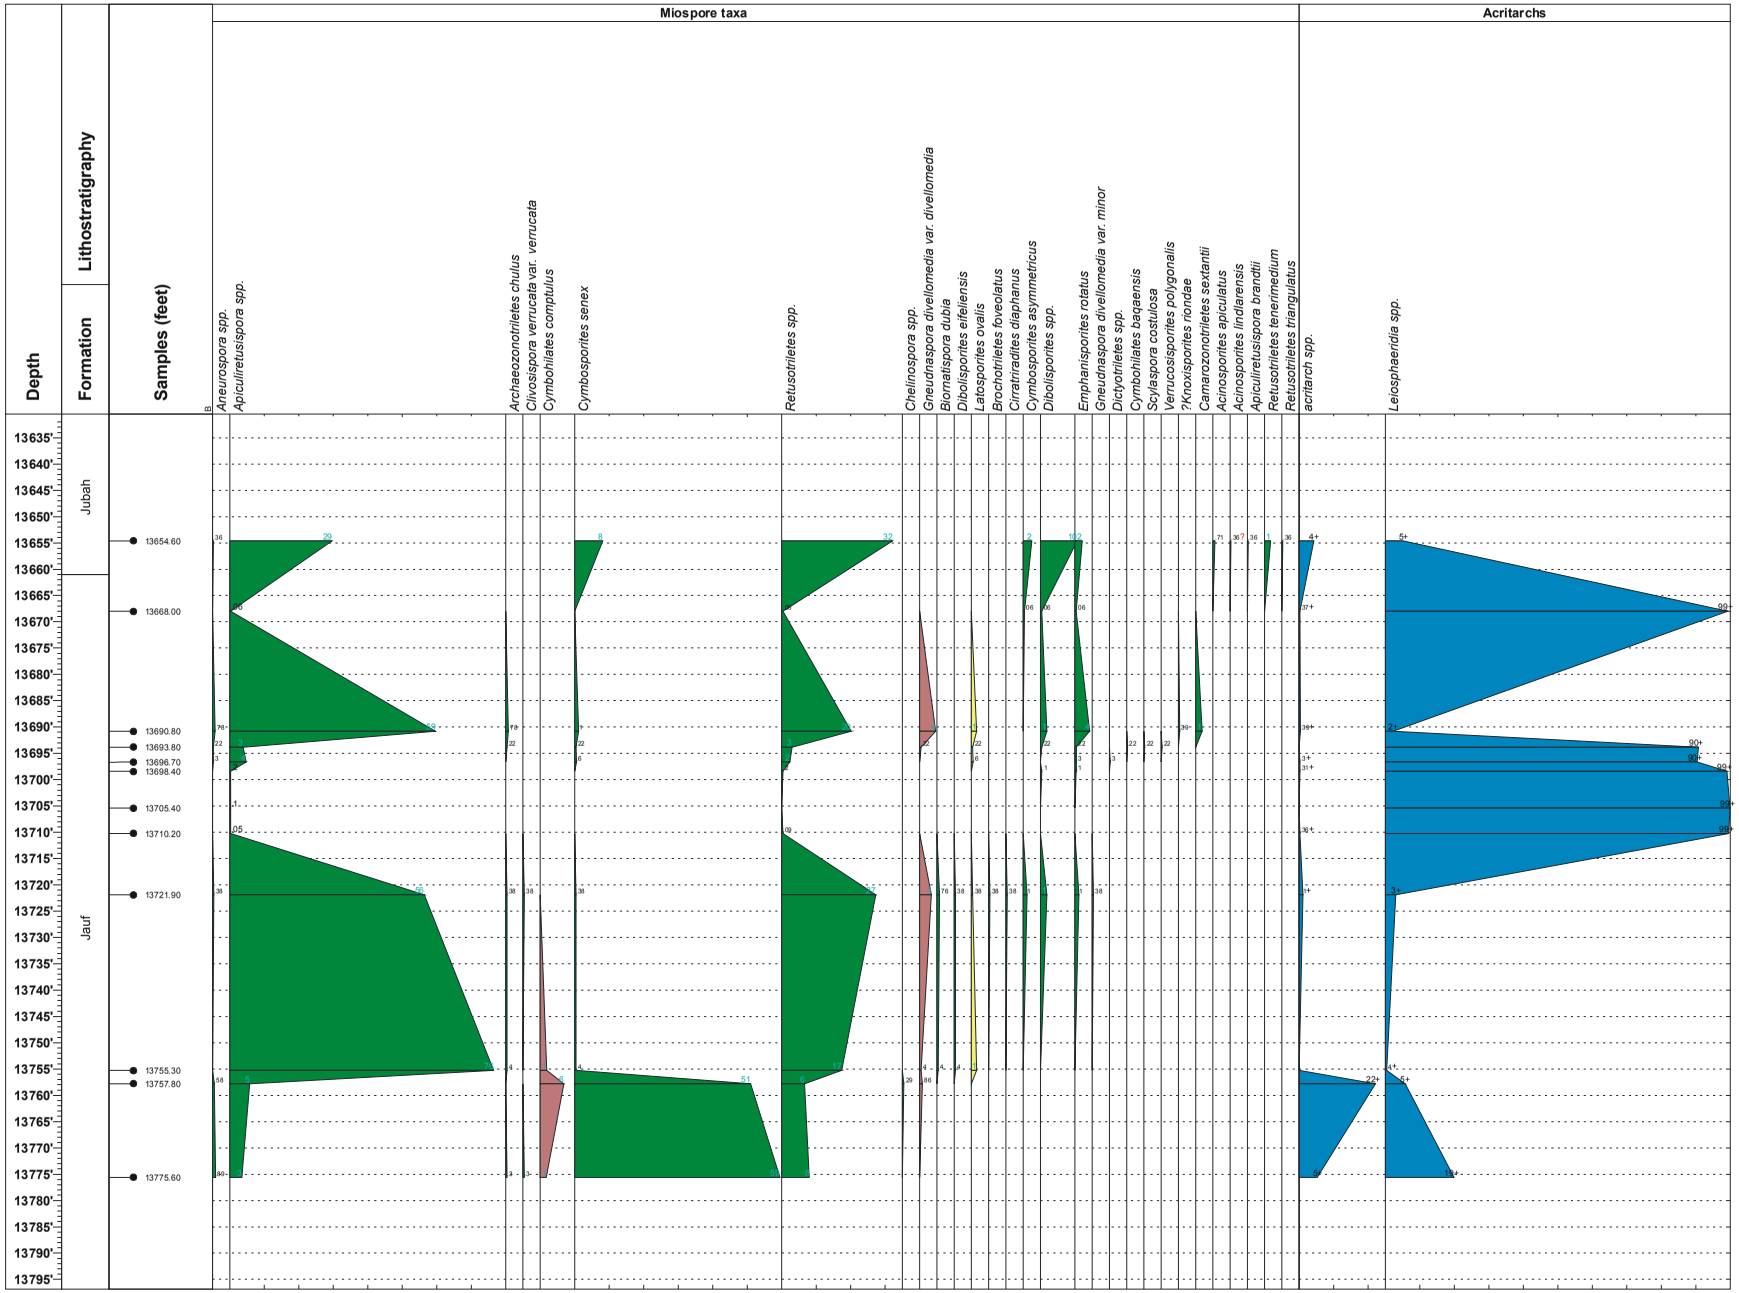

Fig. 2.51. Relative abundance of each individual taxon encountered in well SDGM-462.

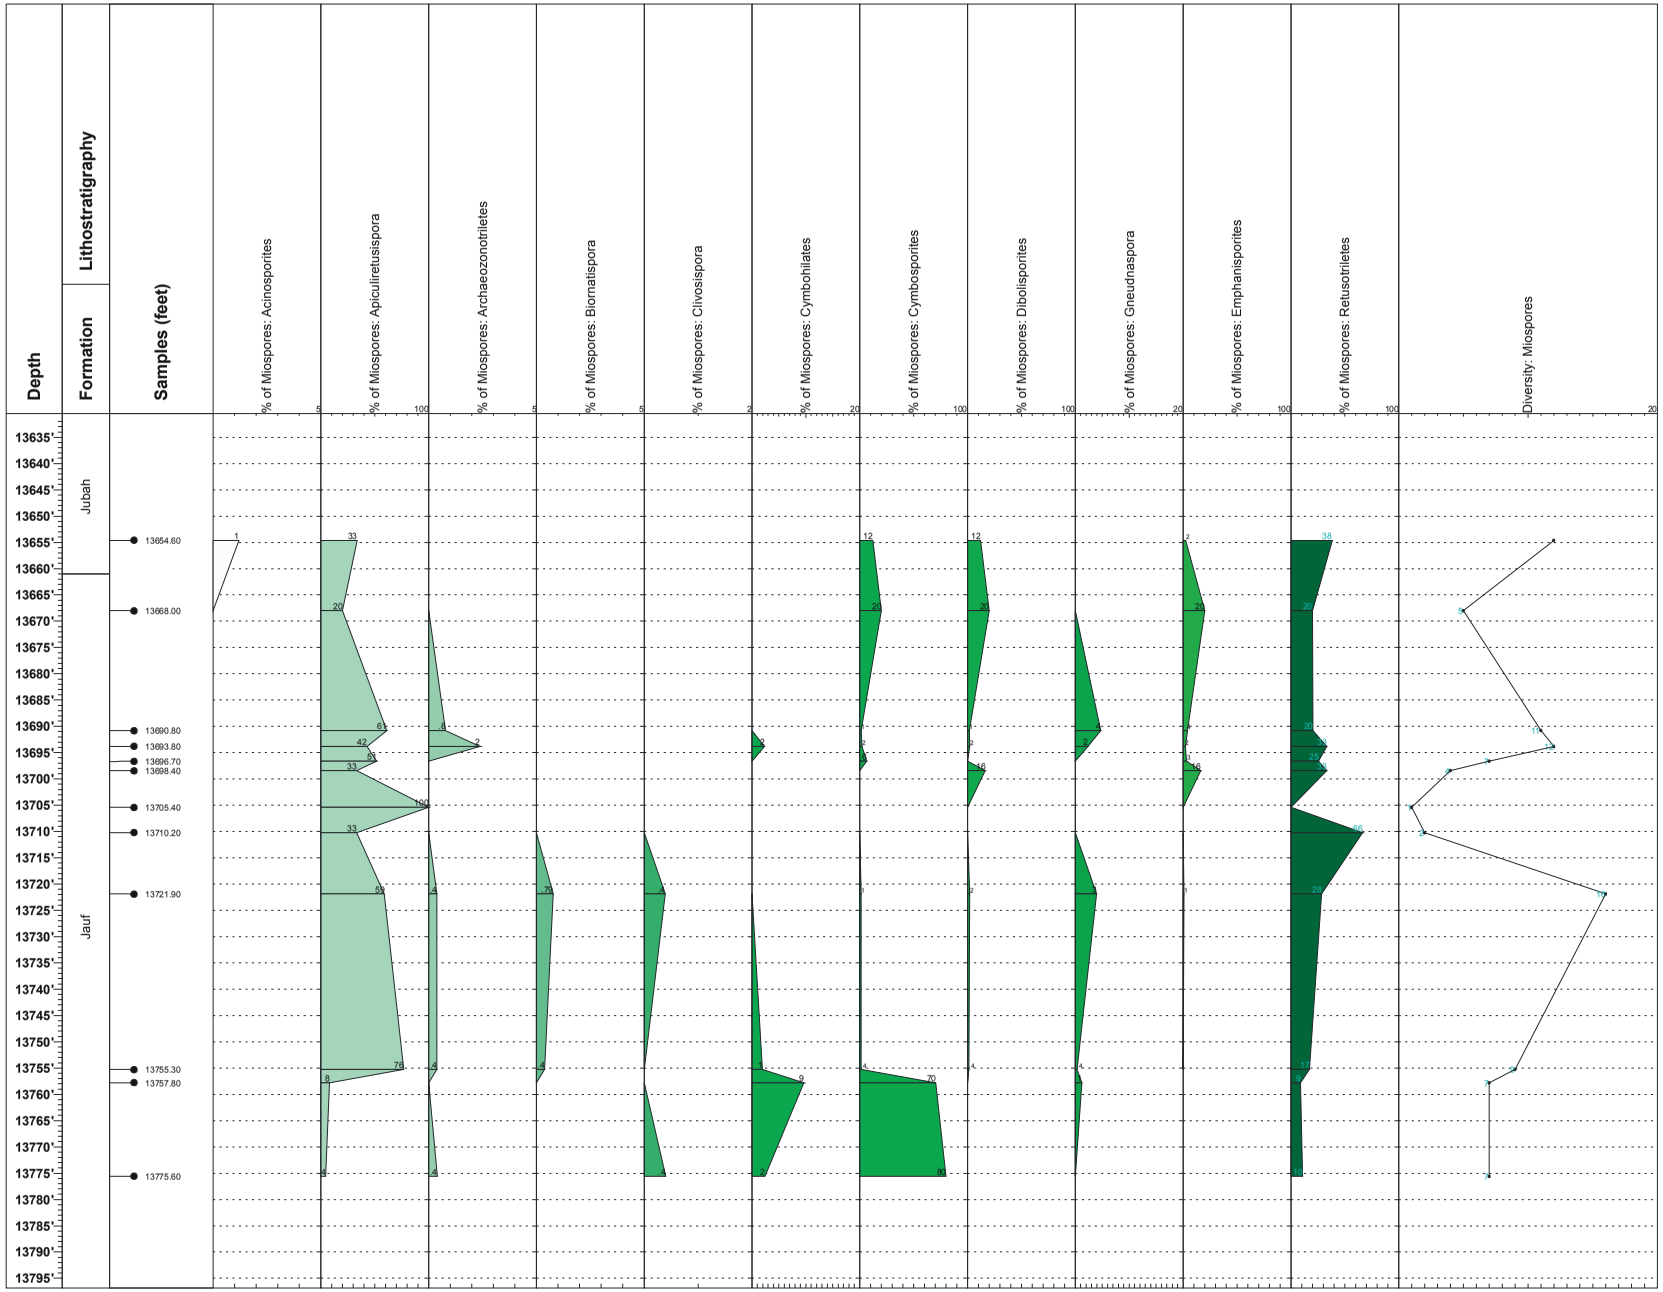

Fig. 2.52. Relative abundance of the main miospore genera encountered in well SDGM-462.

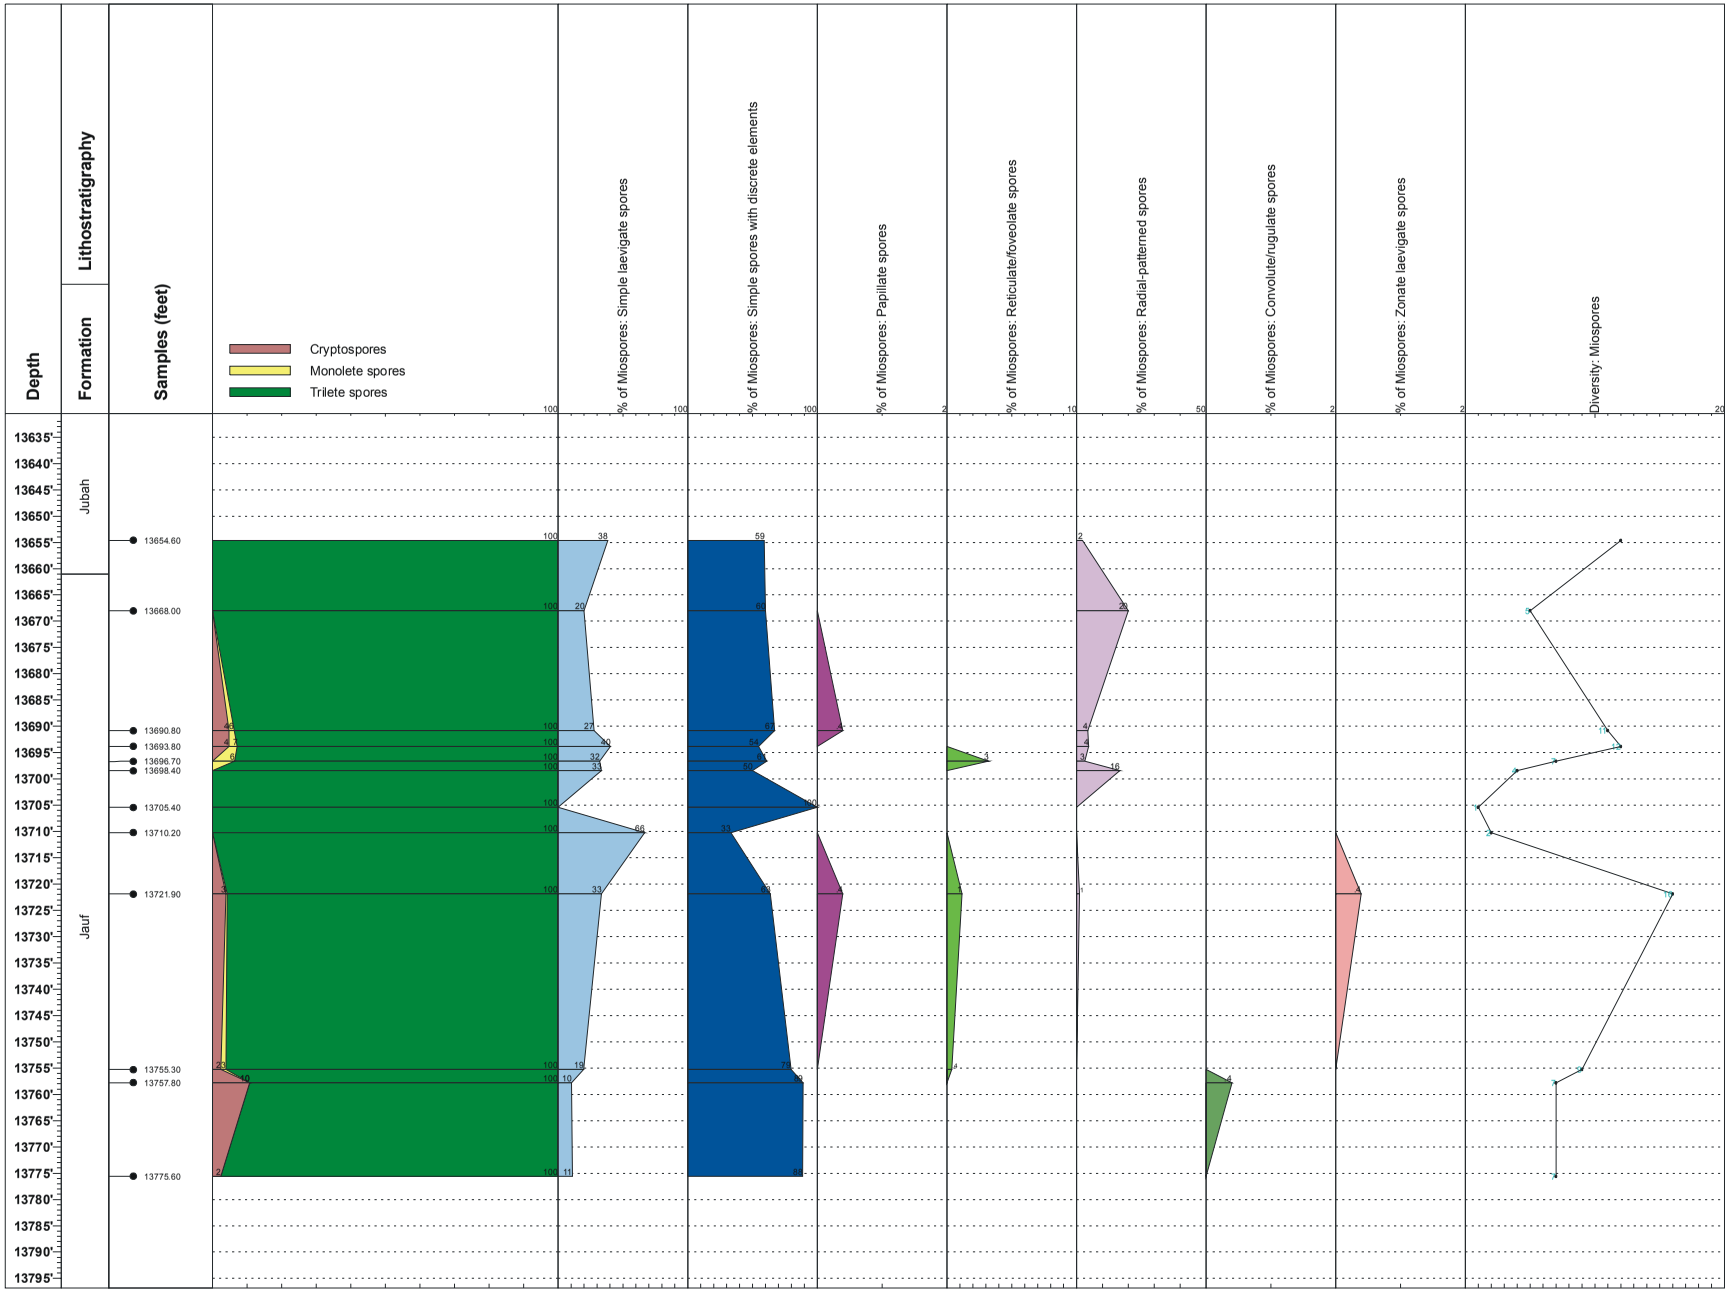

Fig. 2.53. Relative abundance of the main different miospore morphological groups encountered in well SDGM-462.

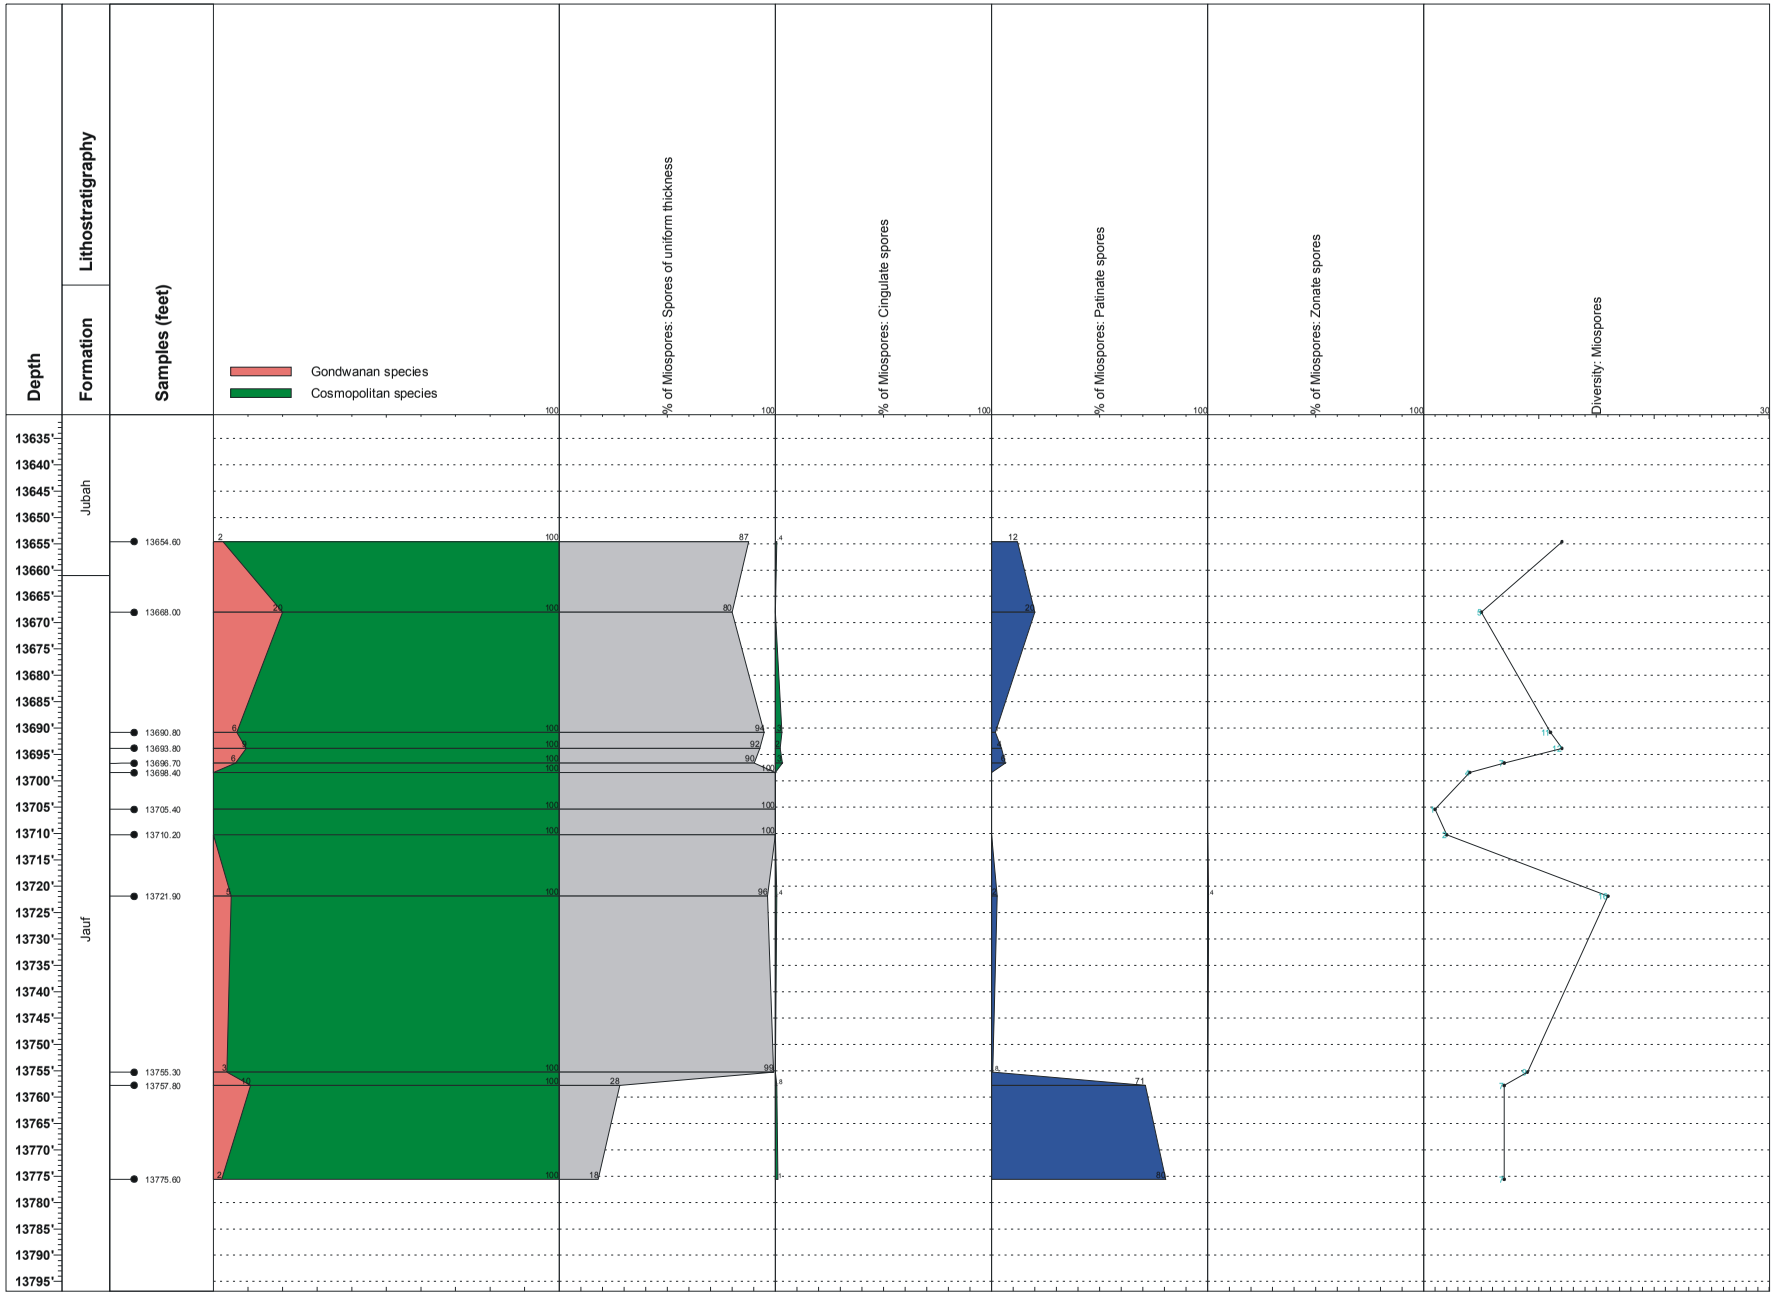

Fig. 2.54. Relative abundance of the miospore groups according to their palaeogeographic affinity in well SDGM-462 on the left and relative abundance of the different miospore structure groups.

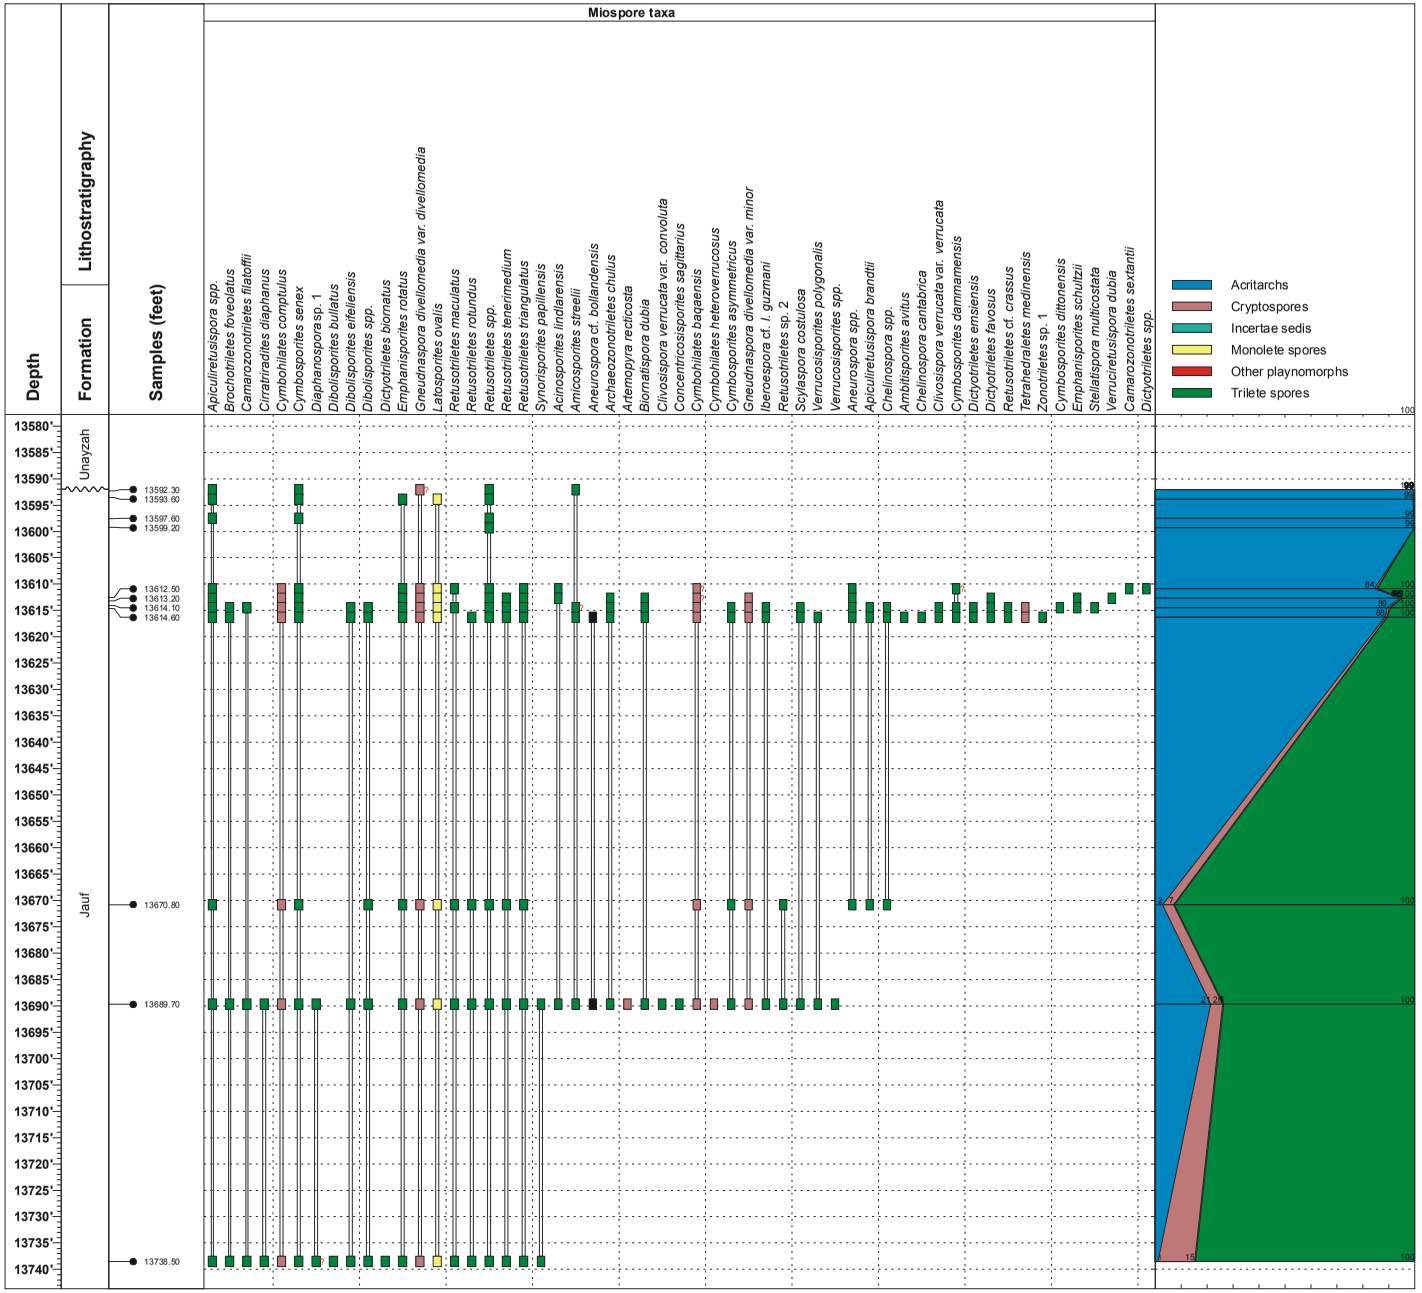

Fig. 2.55. Stratigraphic ranges of miospores encountered in well UTMN-1830.

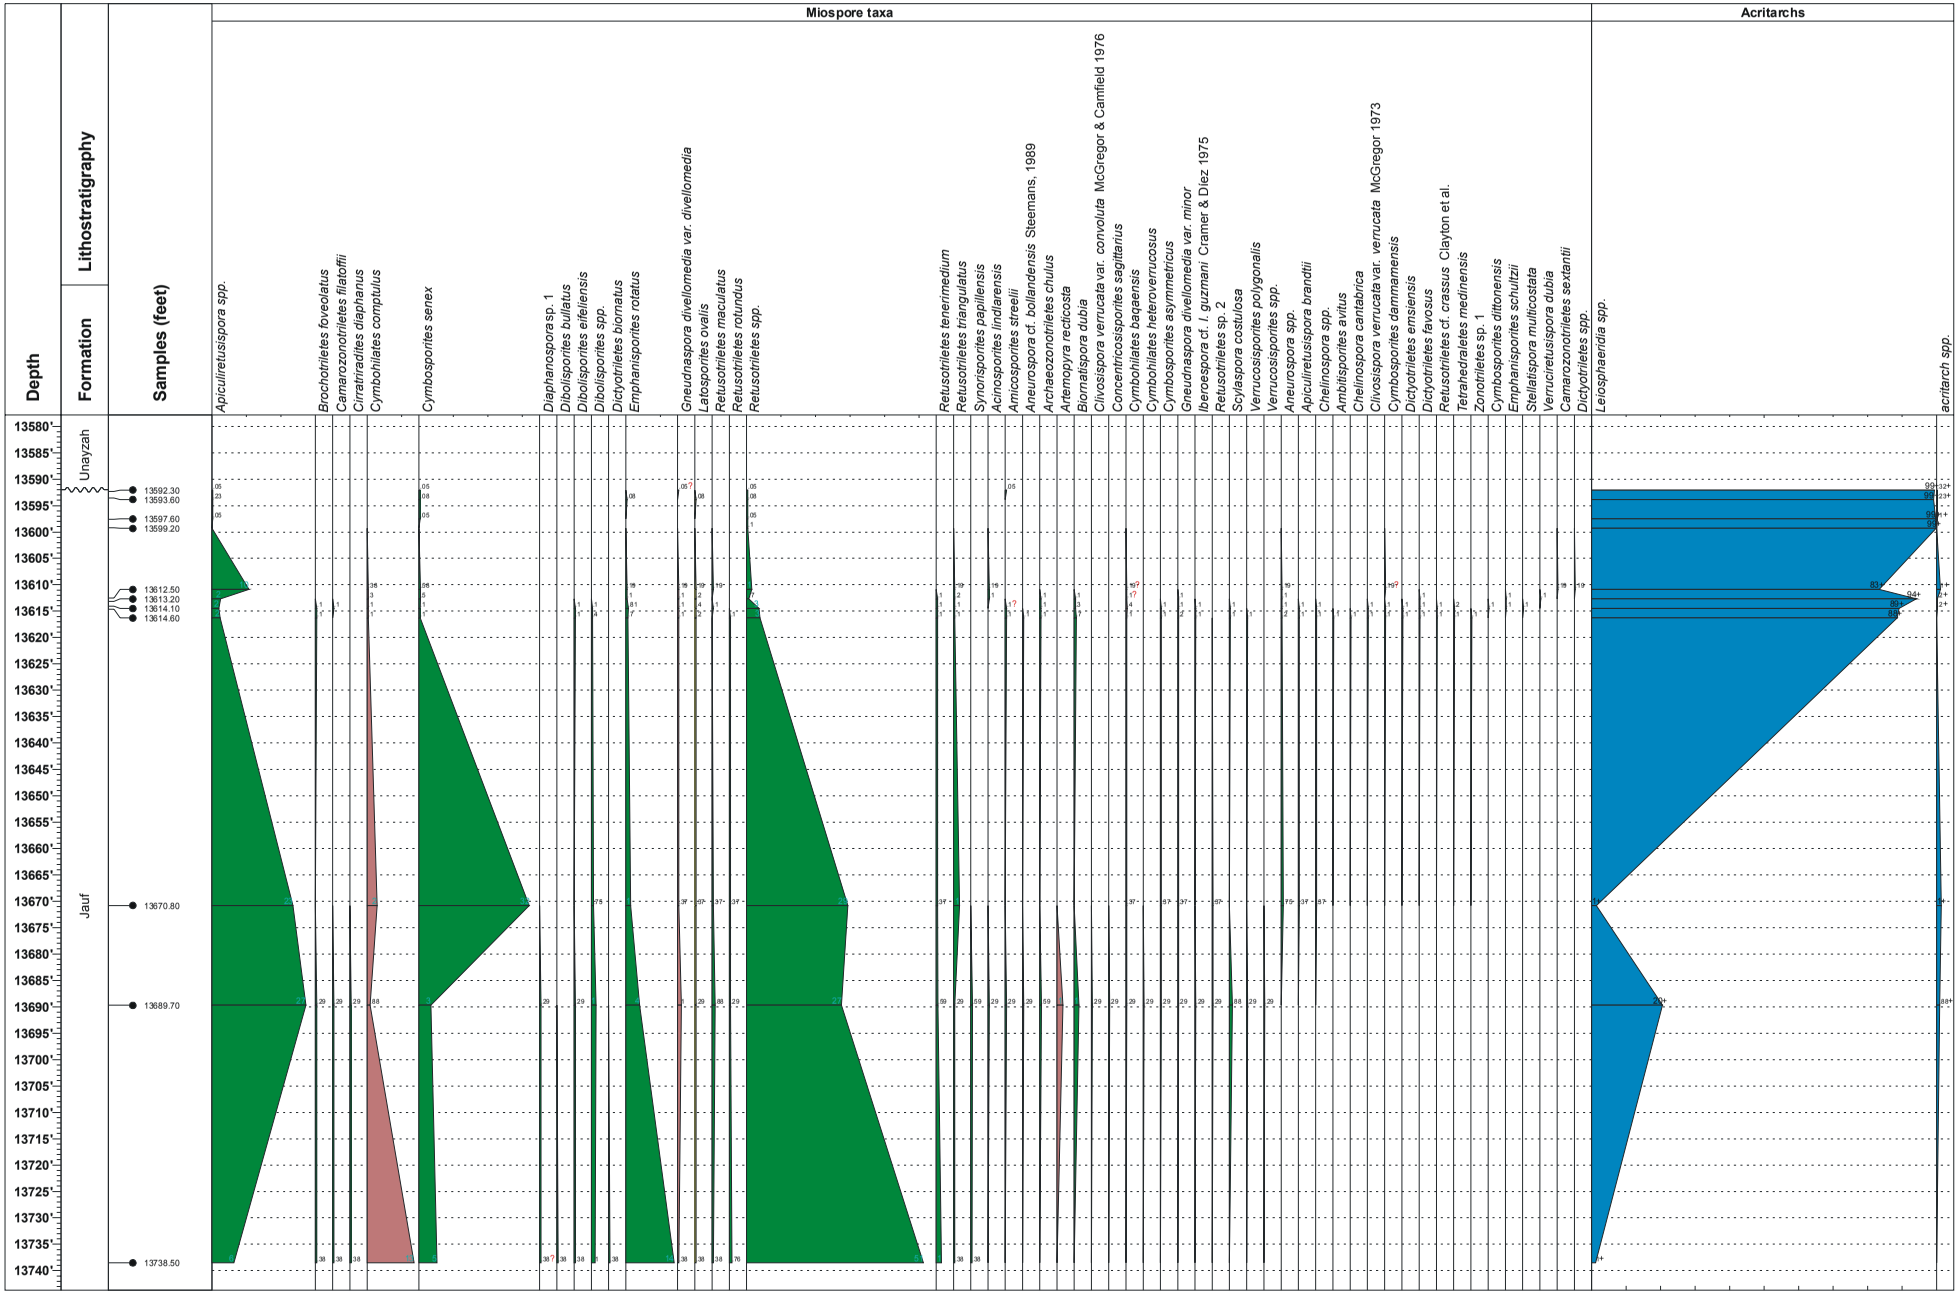

Fig. 2.56. Relative abundance of each individual taxon encountered in well UTMN-1830.

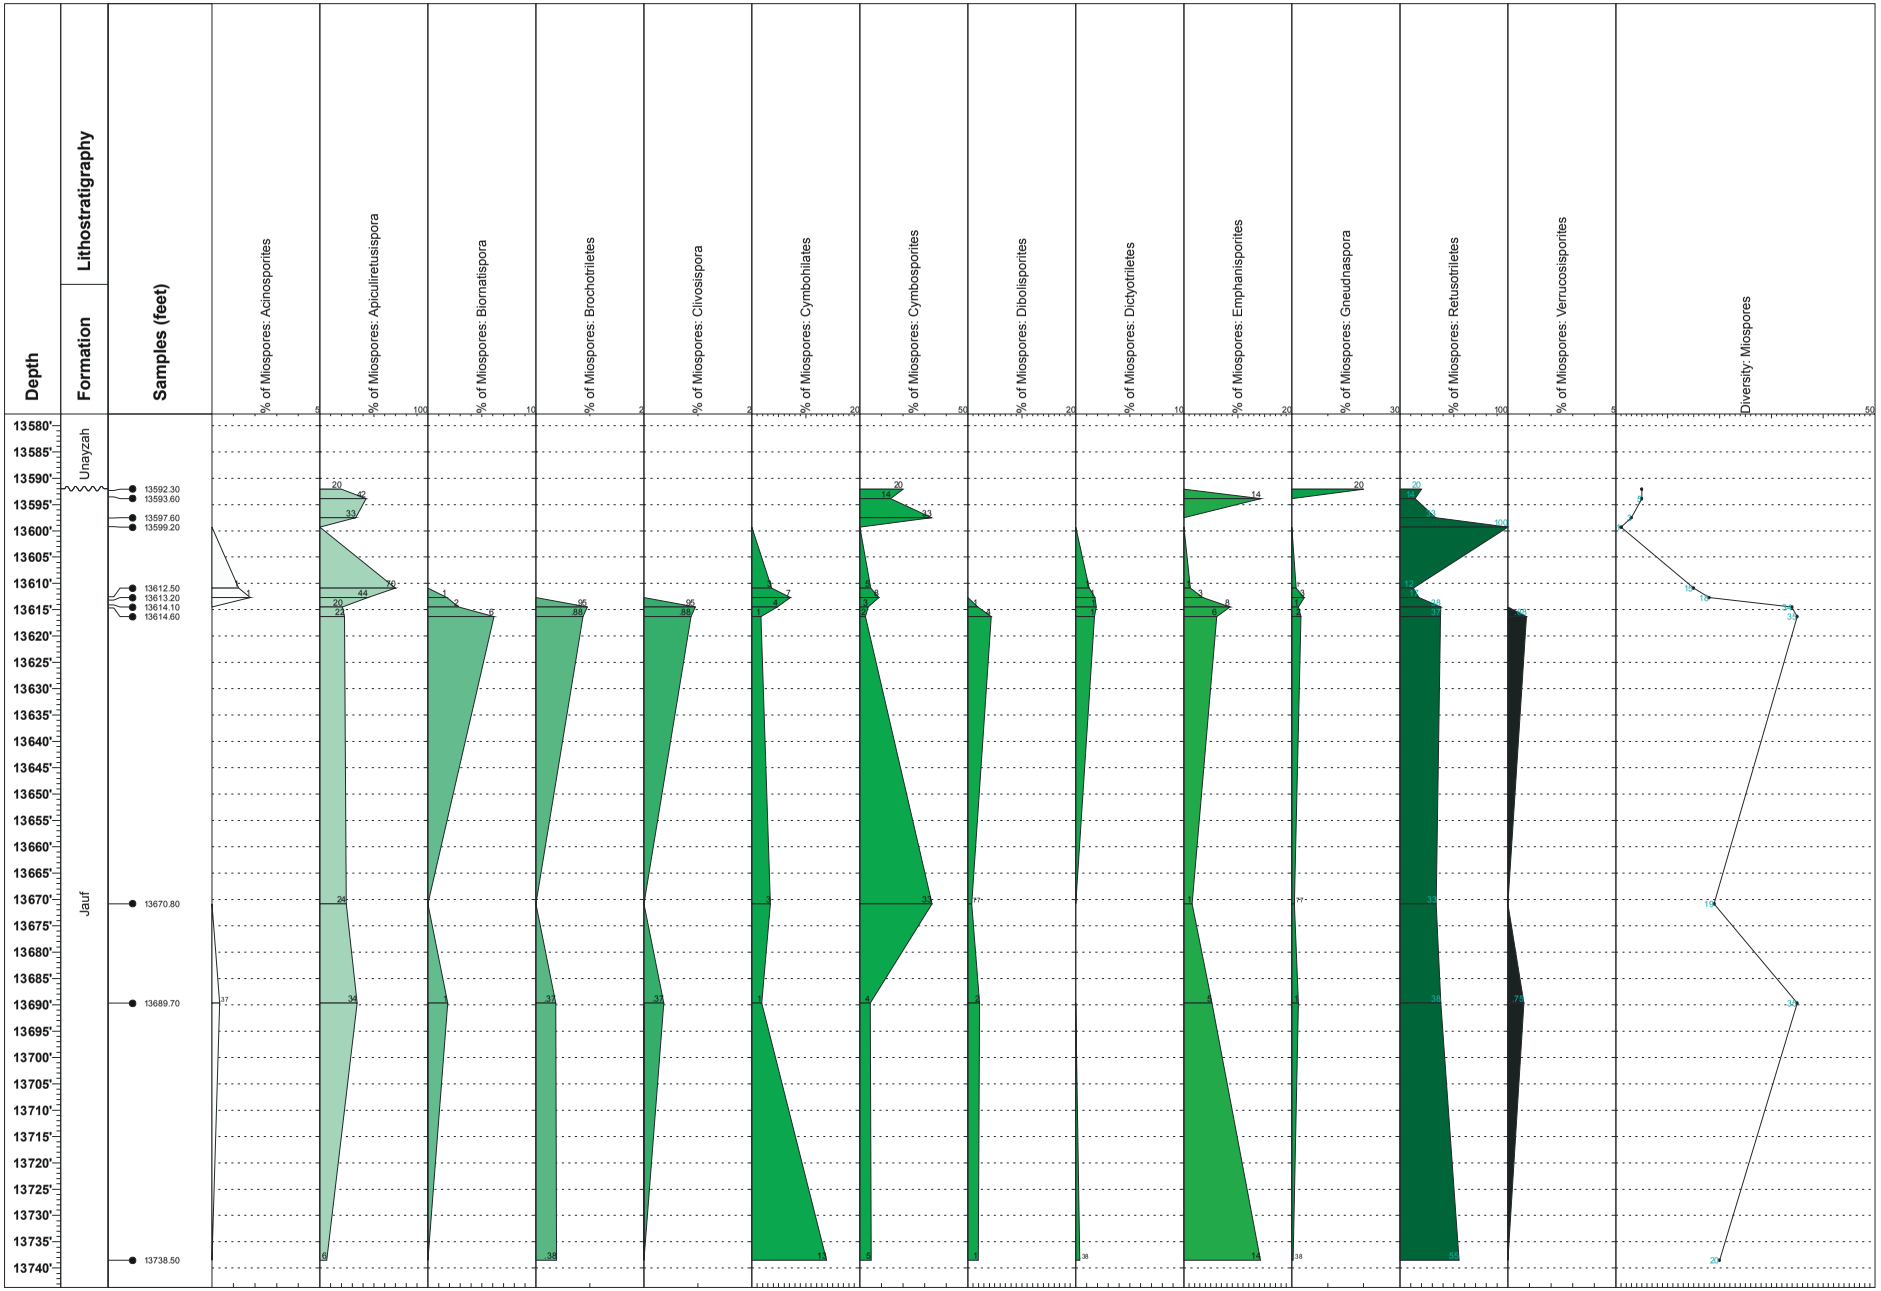

Fig. 2.57. Relative abundance of the main miospore genera encountered in well UTMN-1830.

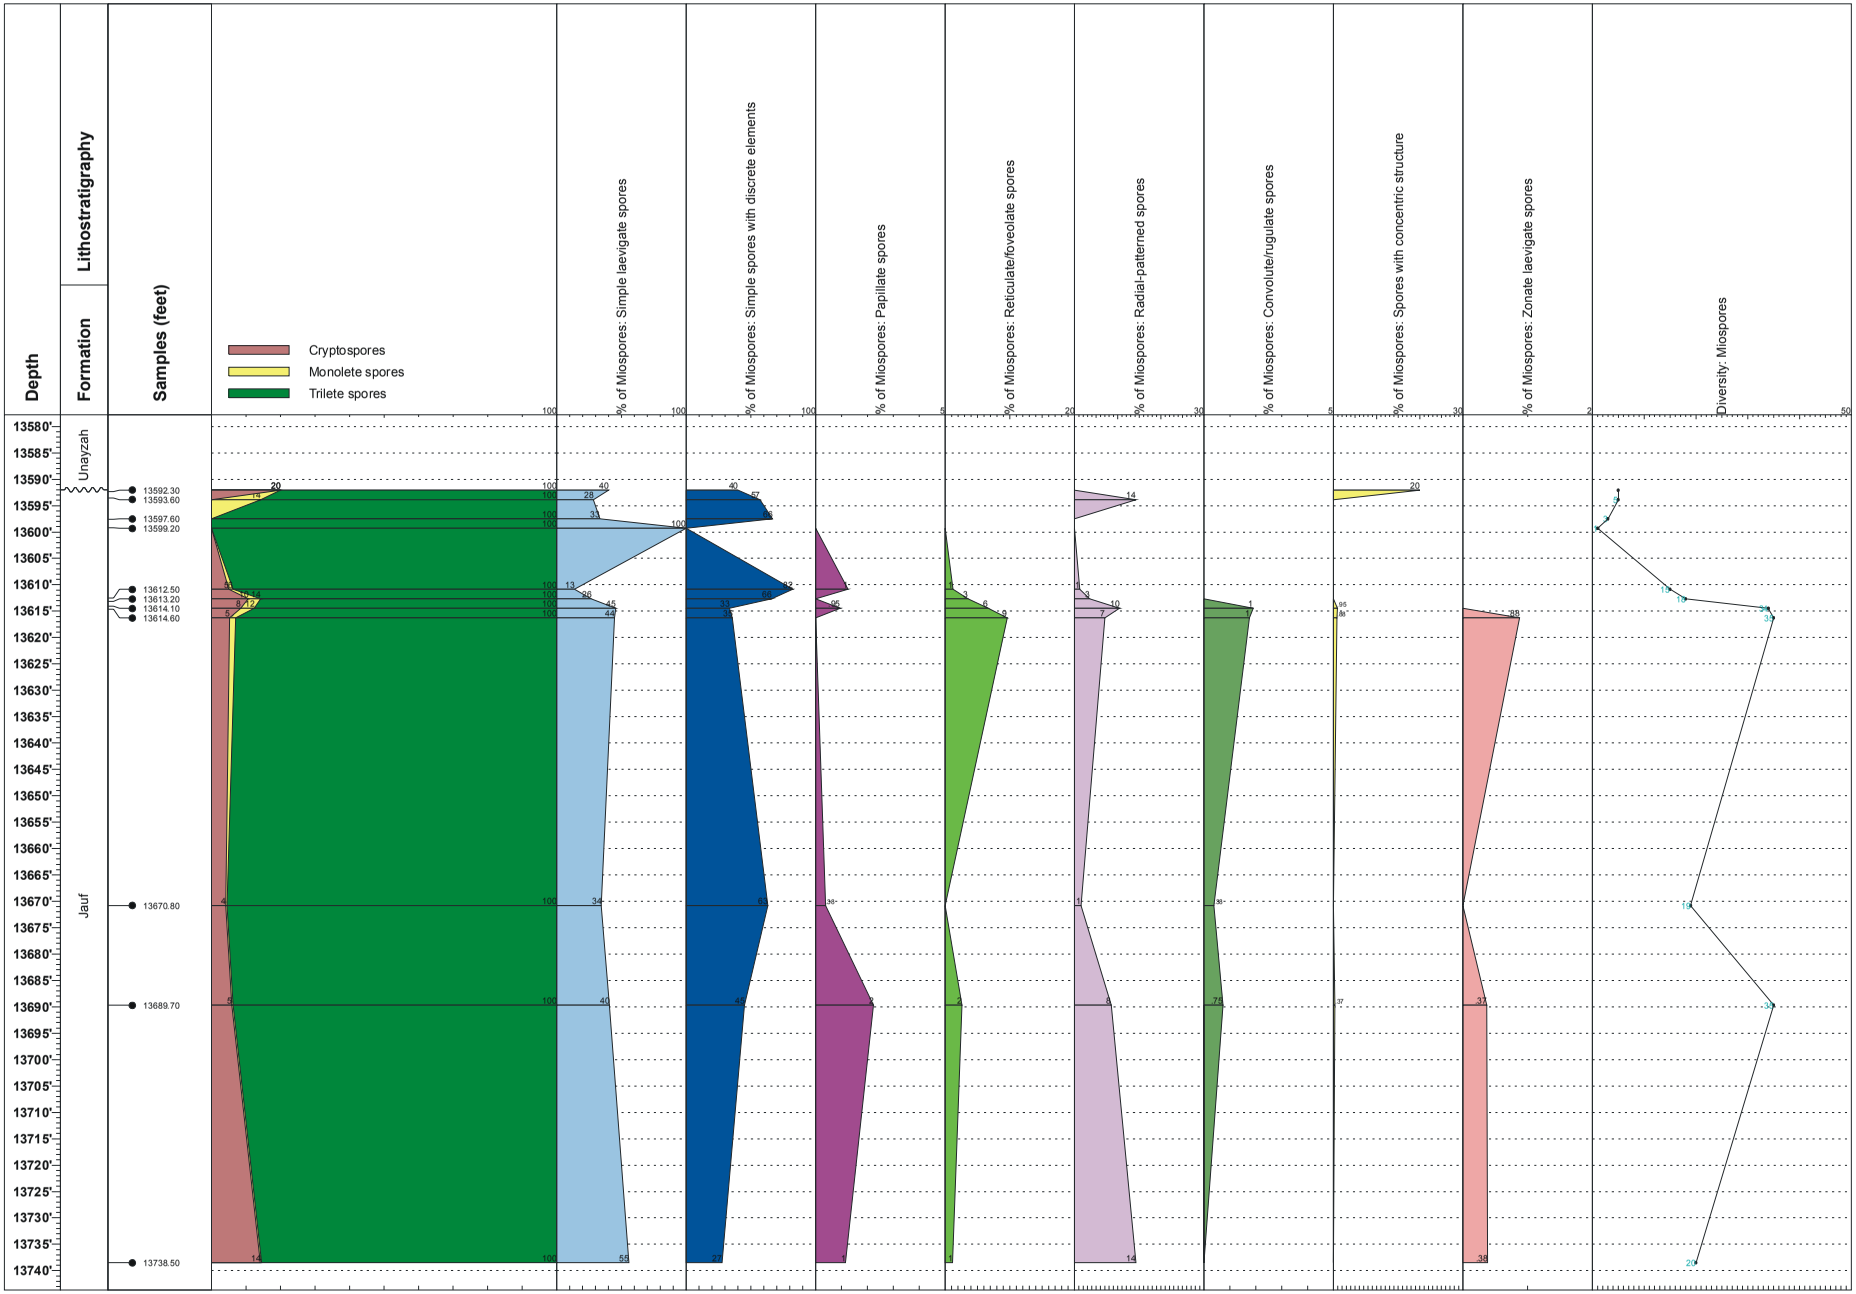

Fig. 2.58. Relative abundance of the main different miospore morphological groups encountered in well UTMN-1830.

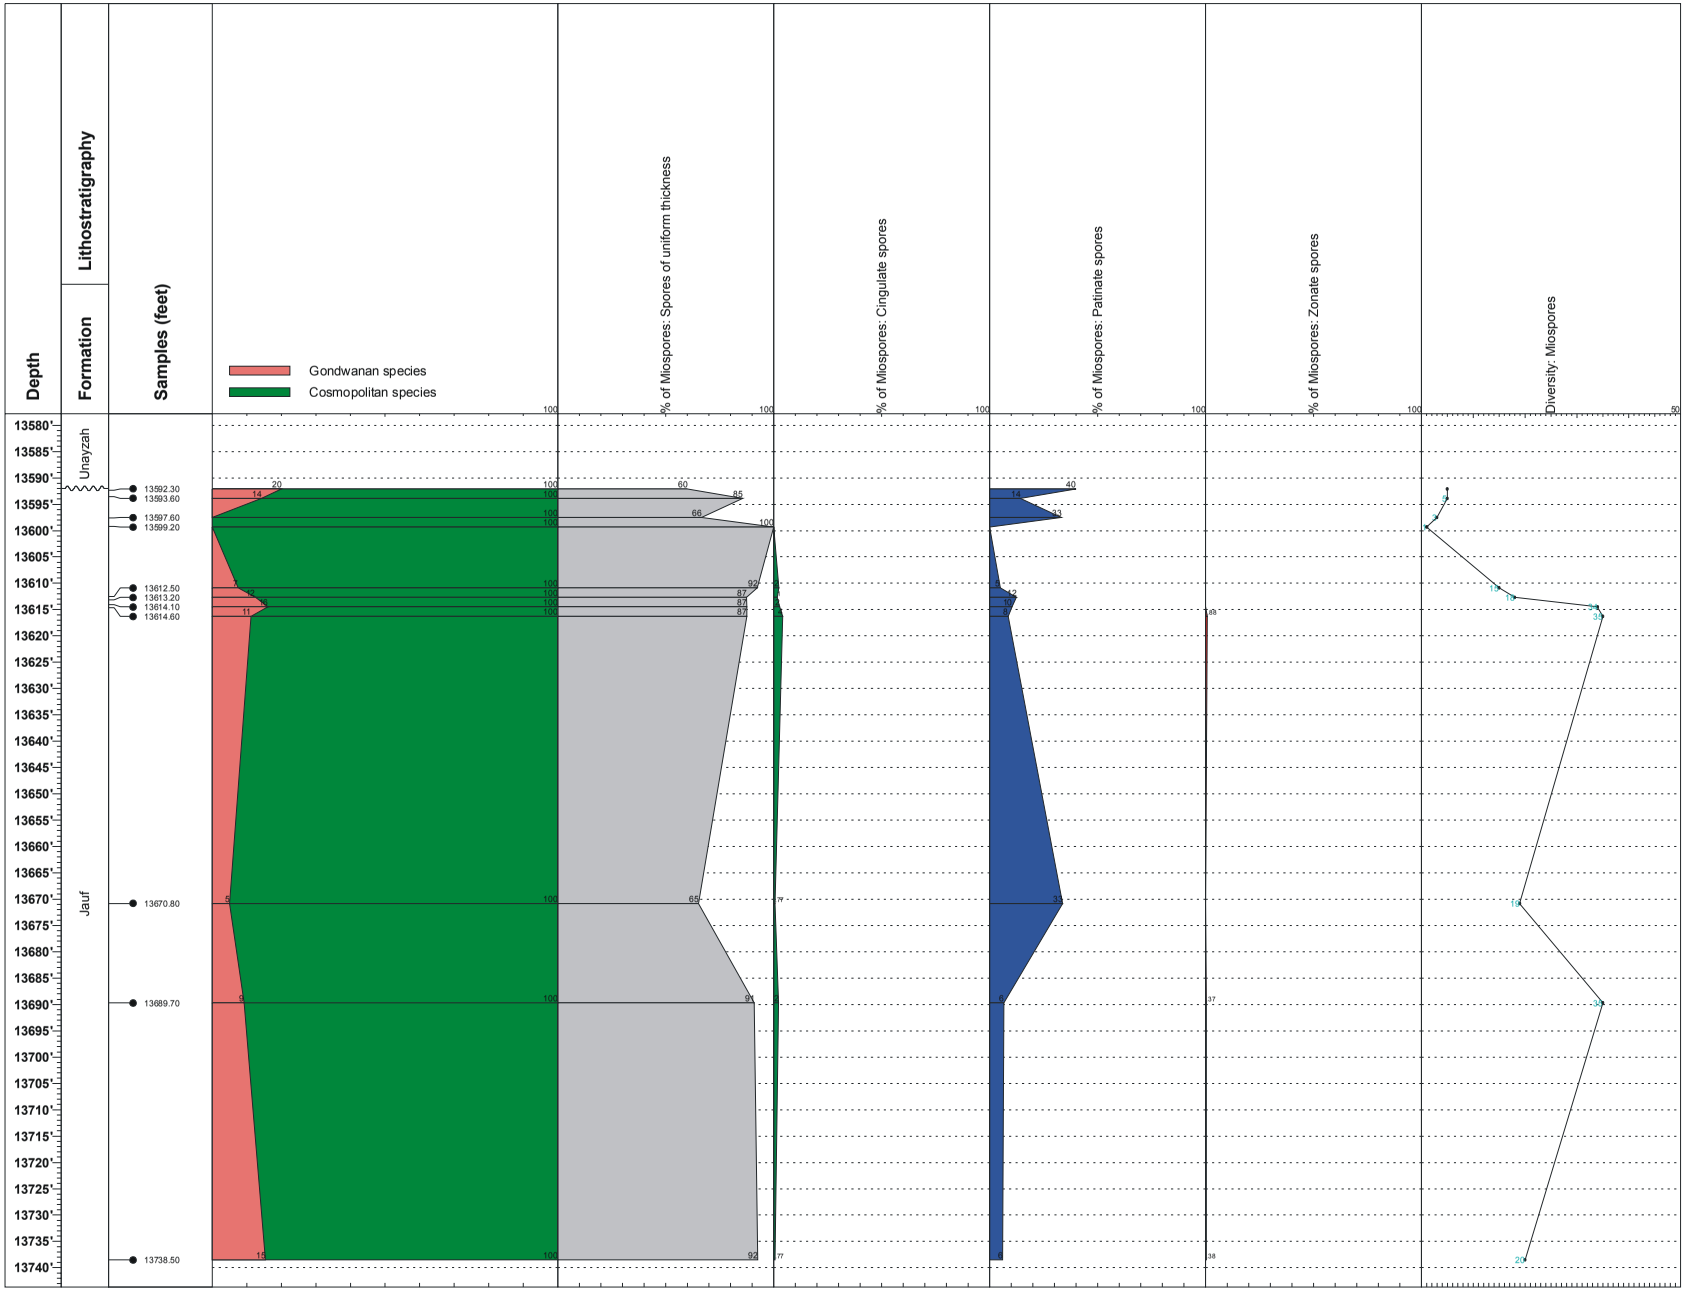

Fig. 2.59. Relative abundance of the miospore groups according to their palaeogeographic affinity in well UTMN-1830 on the left and relative abundance of the different miospore structure groups.

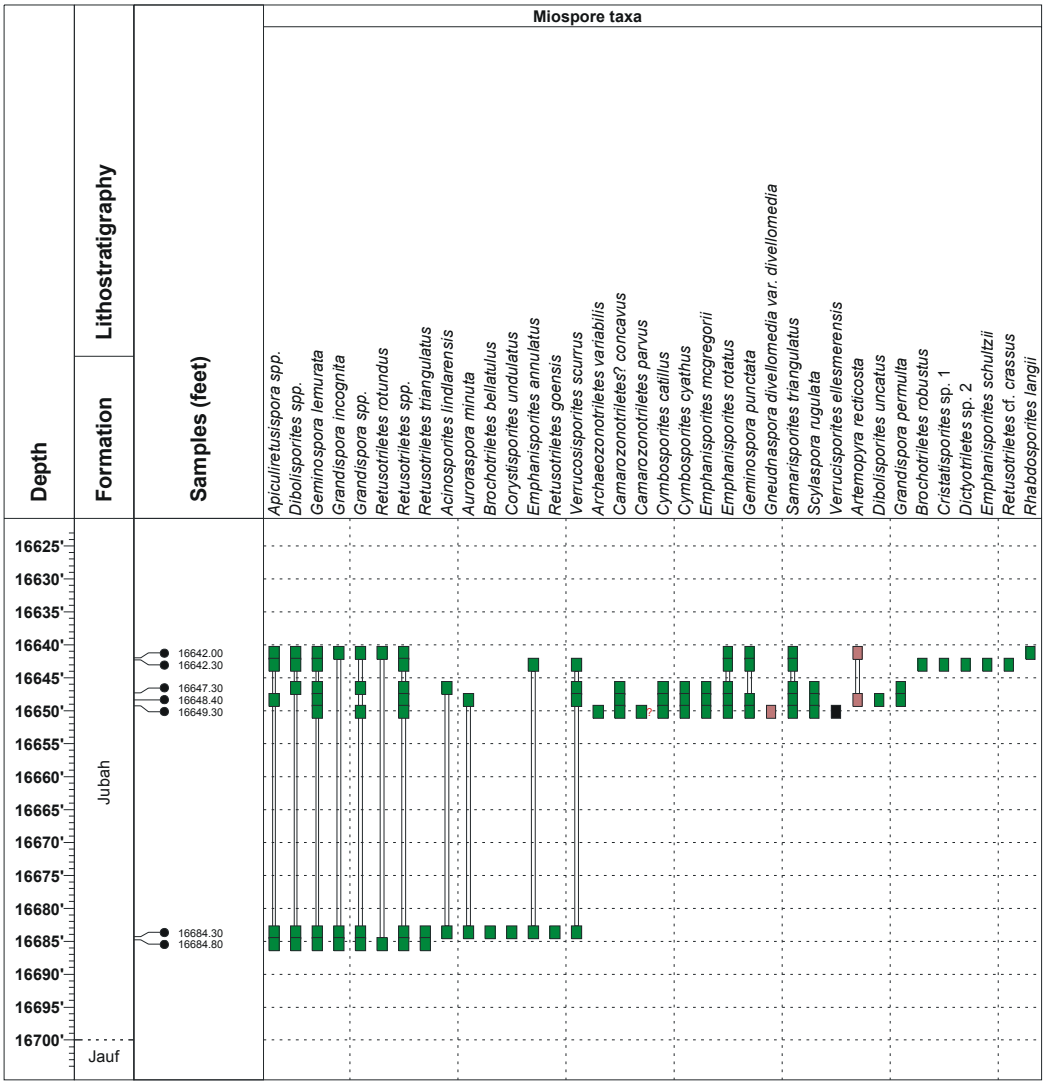

Fig. 2.60. Stratigraphic ranges of miospores encountered in well YBRN-1.

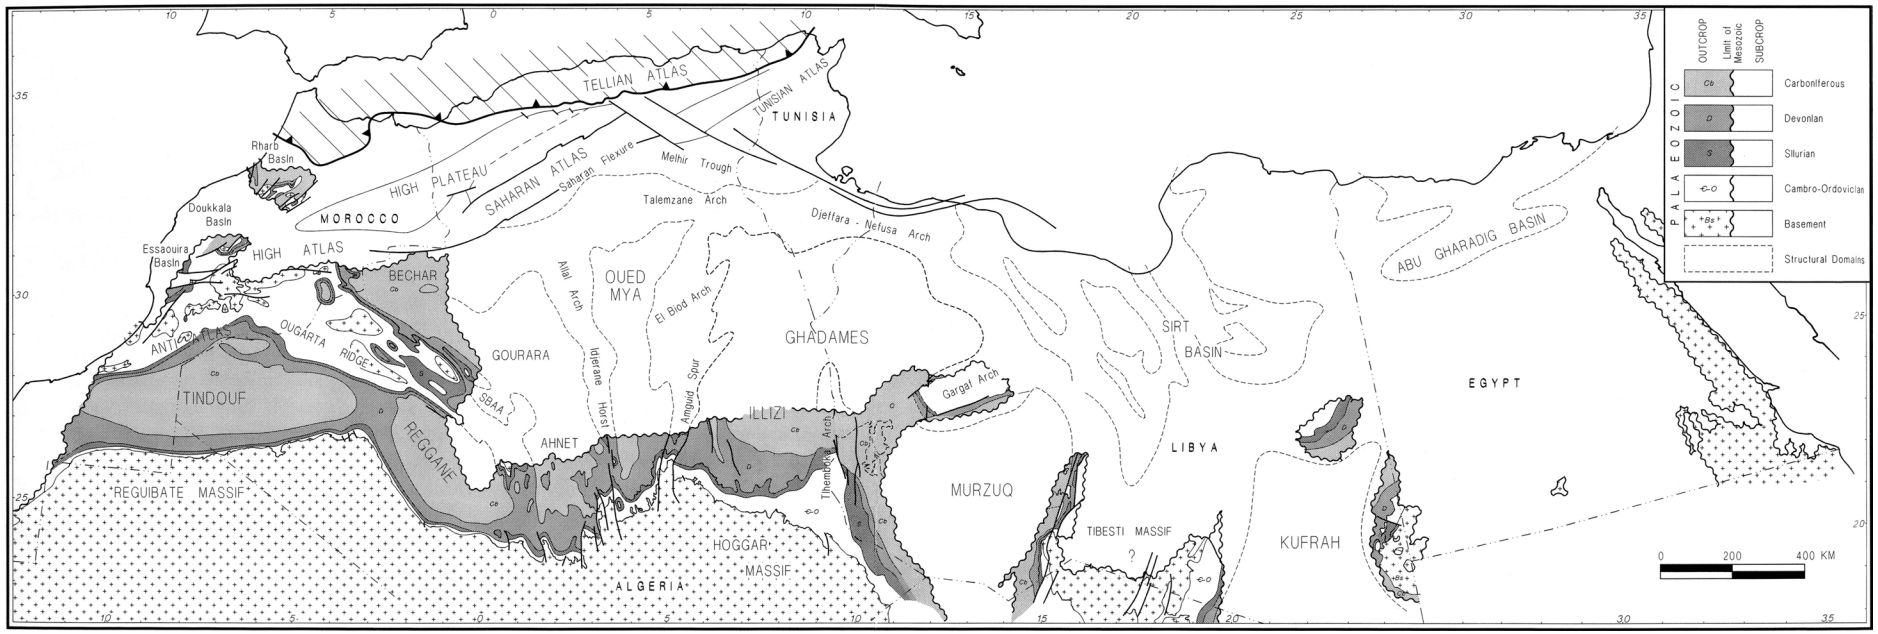

Fig. 3.1. Regional structural framework of North Africa, highlighting the main sedimentary basins. These include the northeast-southwest aligned Atlas fault system extending into the Djeffara fault trend to the east. Basement and Palaeozoic outcrops in the southern part of the region are shown by various shading (modified after Boote et al., 1998).

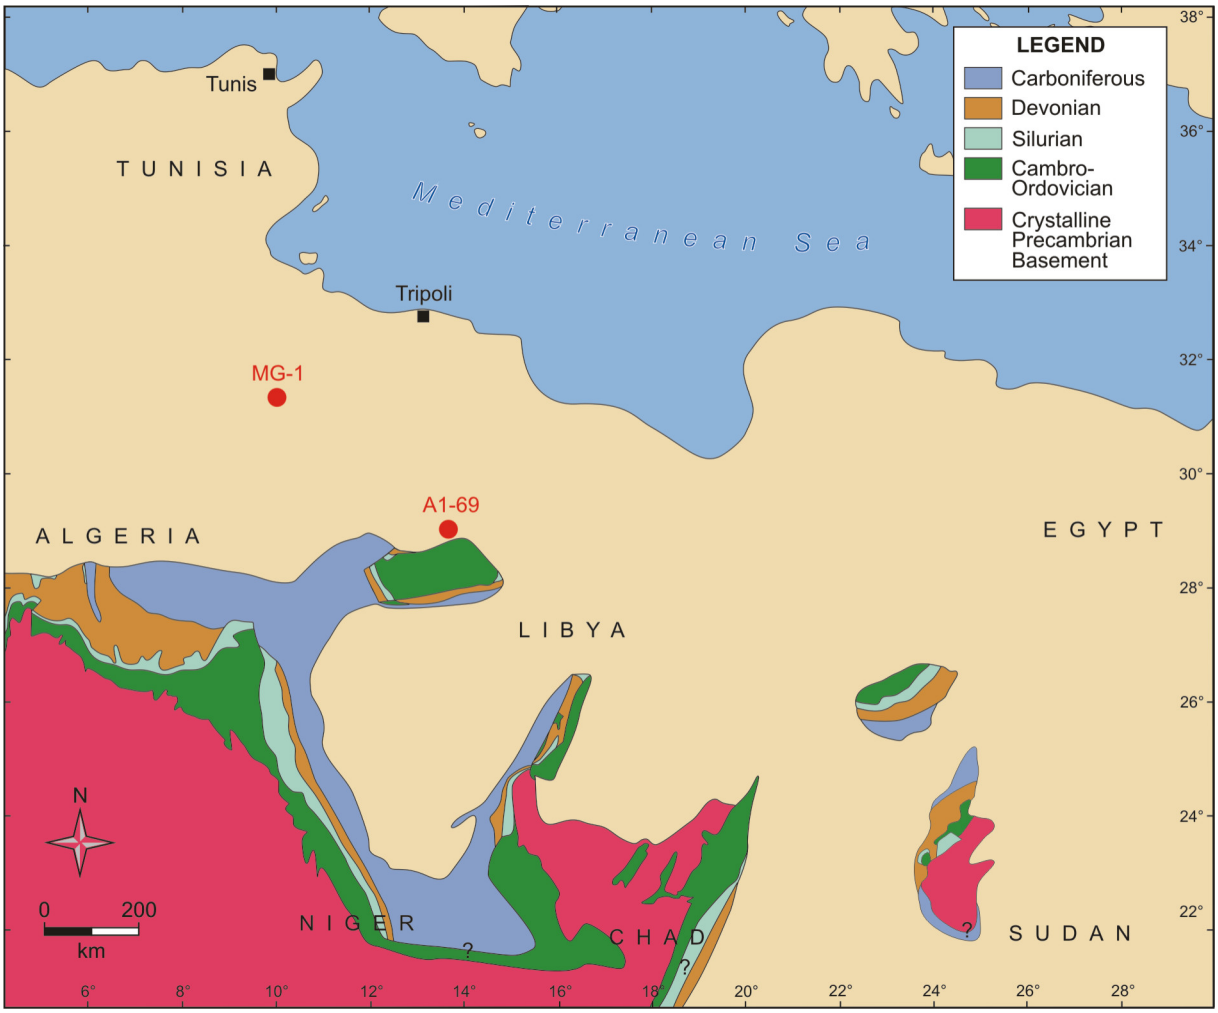

Fig. 3.2. Palaeozoic outcrops in Northern Africa (modified after Boote et al., 1998 and Massa, 1988).

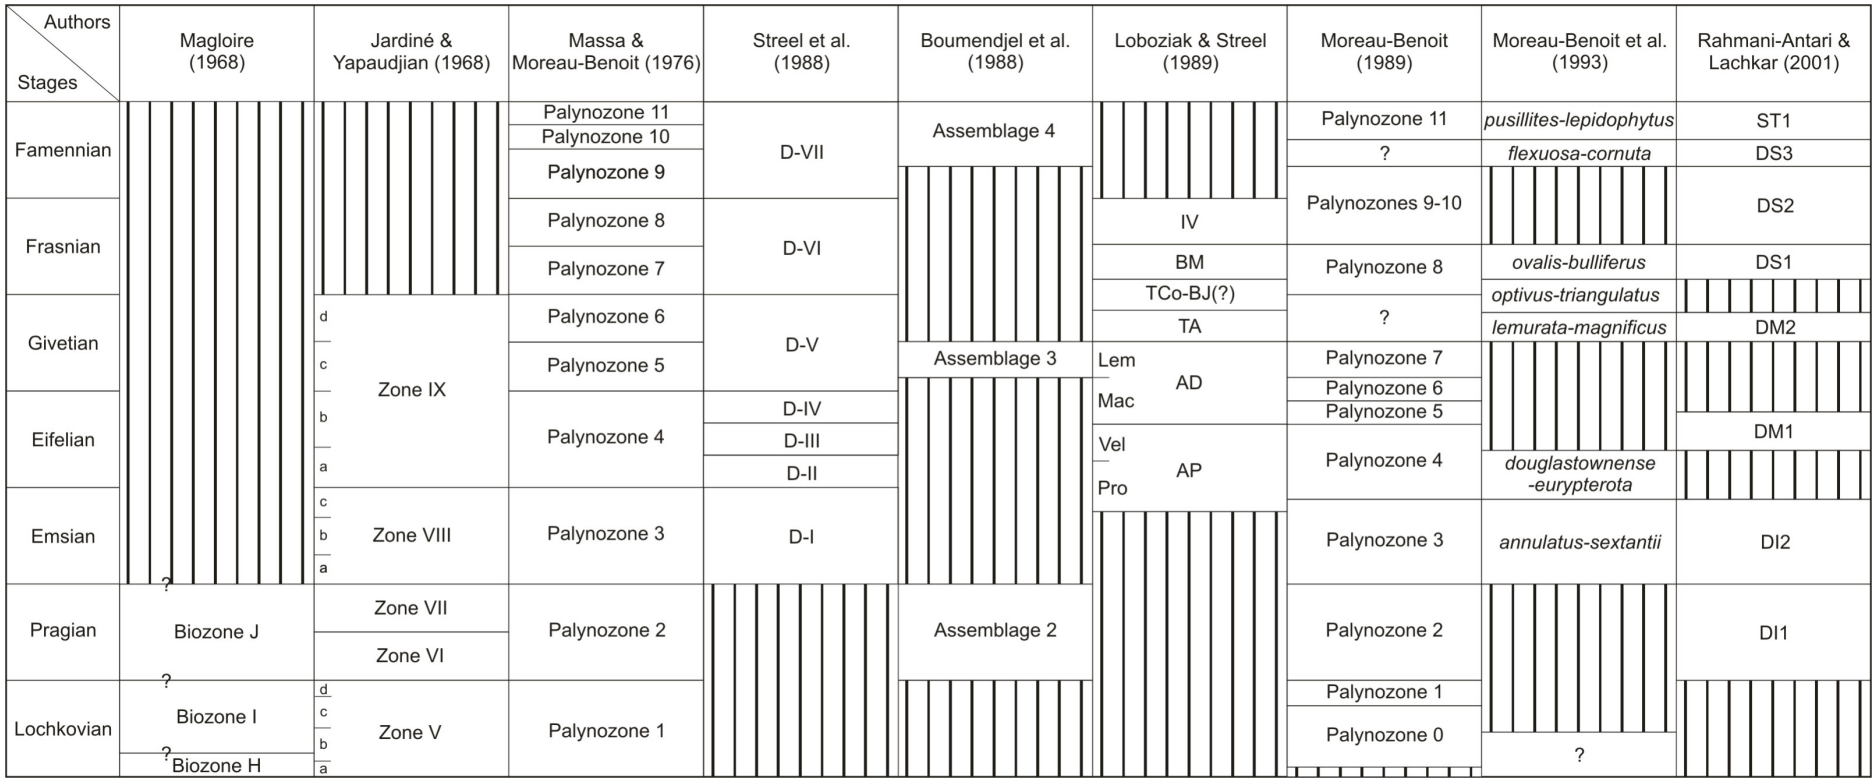

Fig. 3.3. Chart comparing biozonation from the main studies on Devonian from North Africa. Loboziak & Streel (1989) used biozonation of Streel et al. (1987) and Moreau-Benoit et al. (1993) used biozonation of Richardson & McGregor (1986). Moreau-Benoit (1989) reinterpreted biozones defined previously in Massa & Moreau-Benoit (1976).

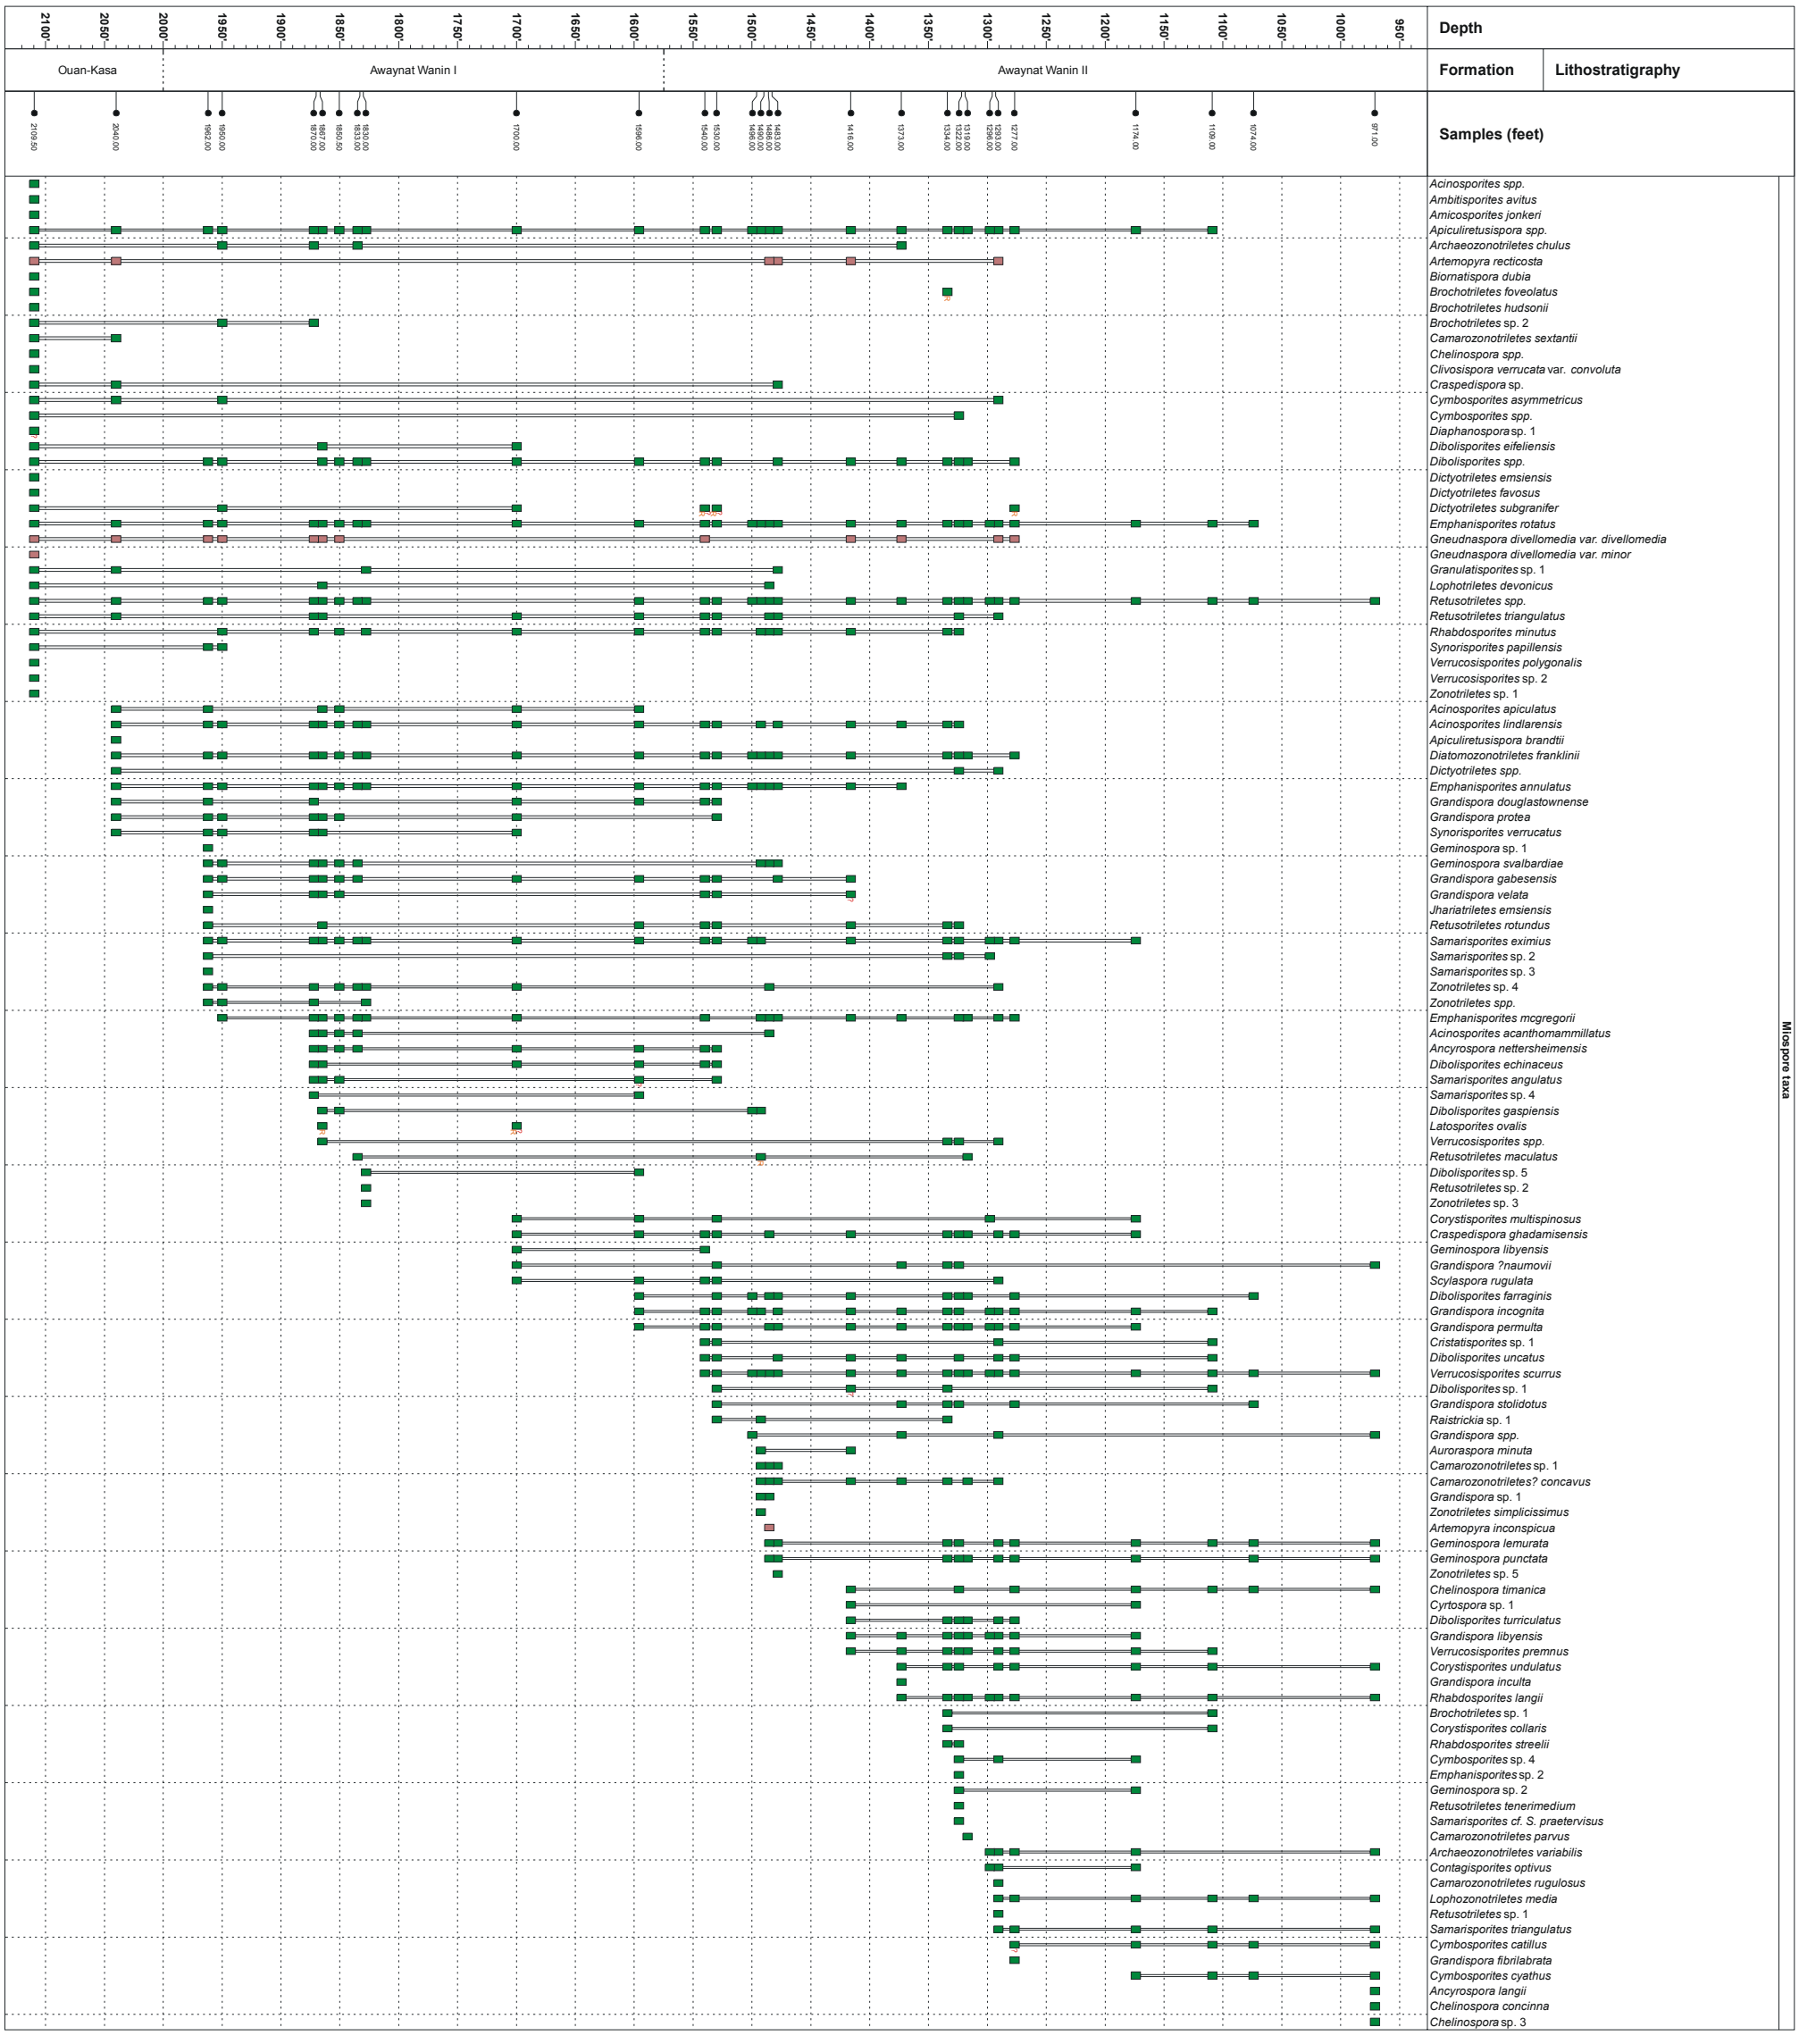

Fig. 3.4. Stratigraphic ranges of miospores encountered in borehole A1-69.

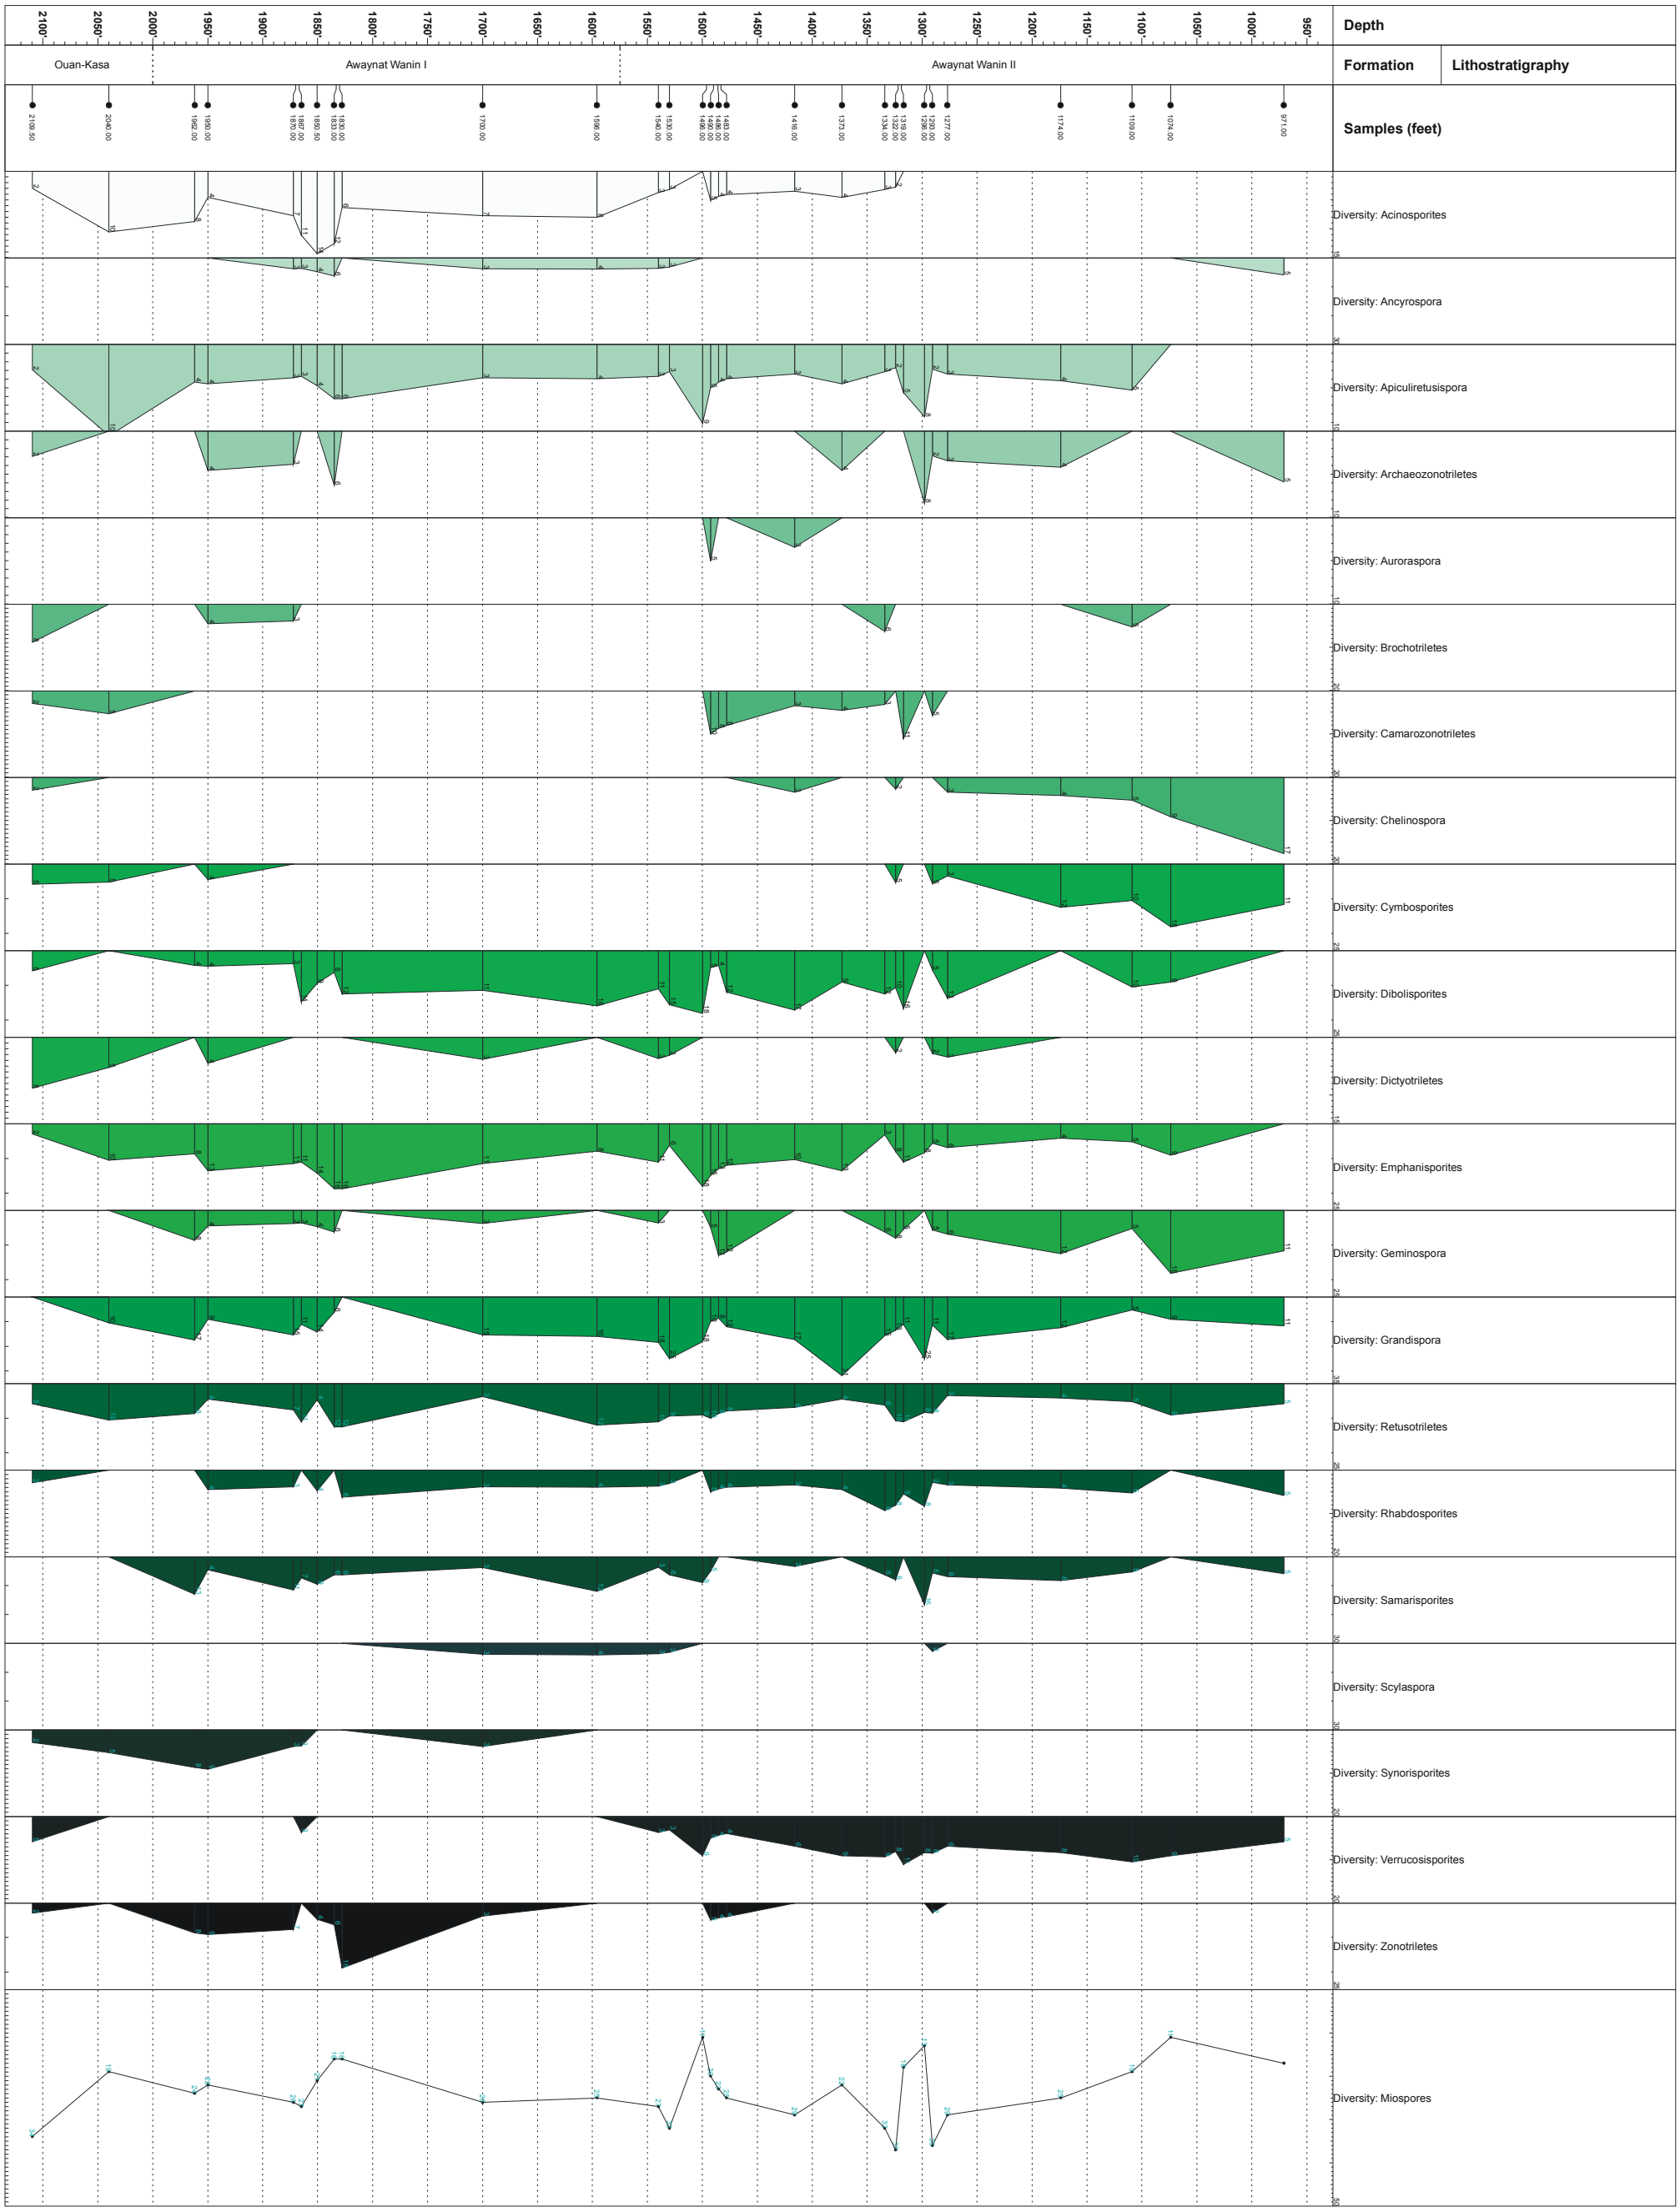

Fig. 3.5. Relative abundance of the main miospore genera encountered in borehole A1-69.

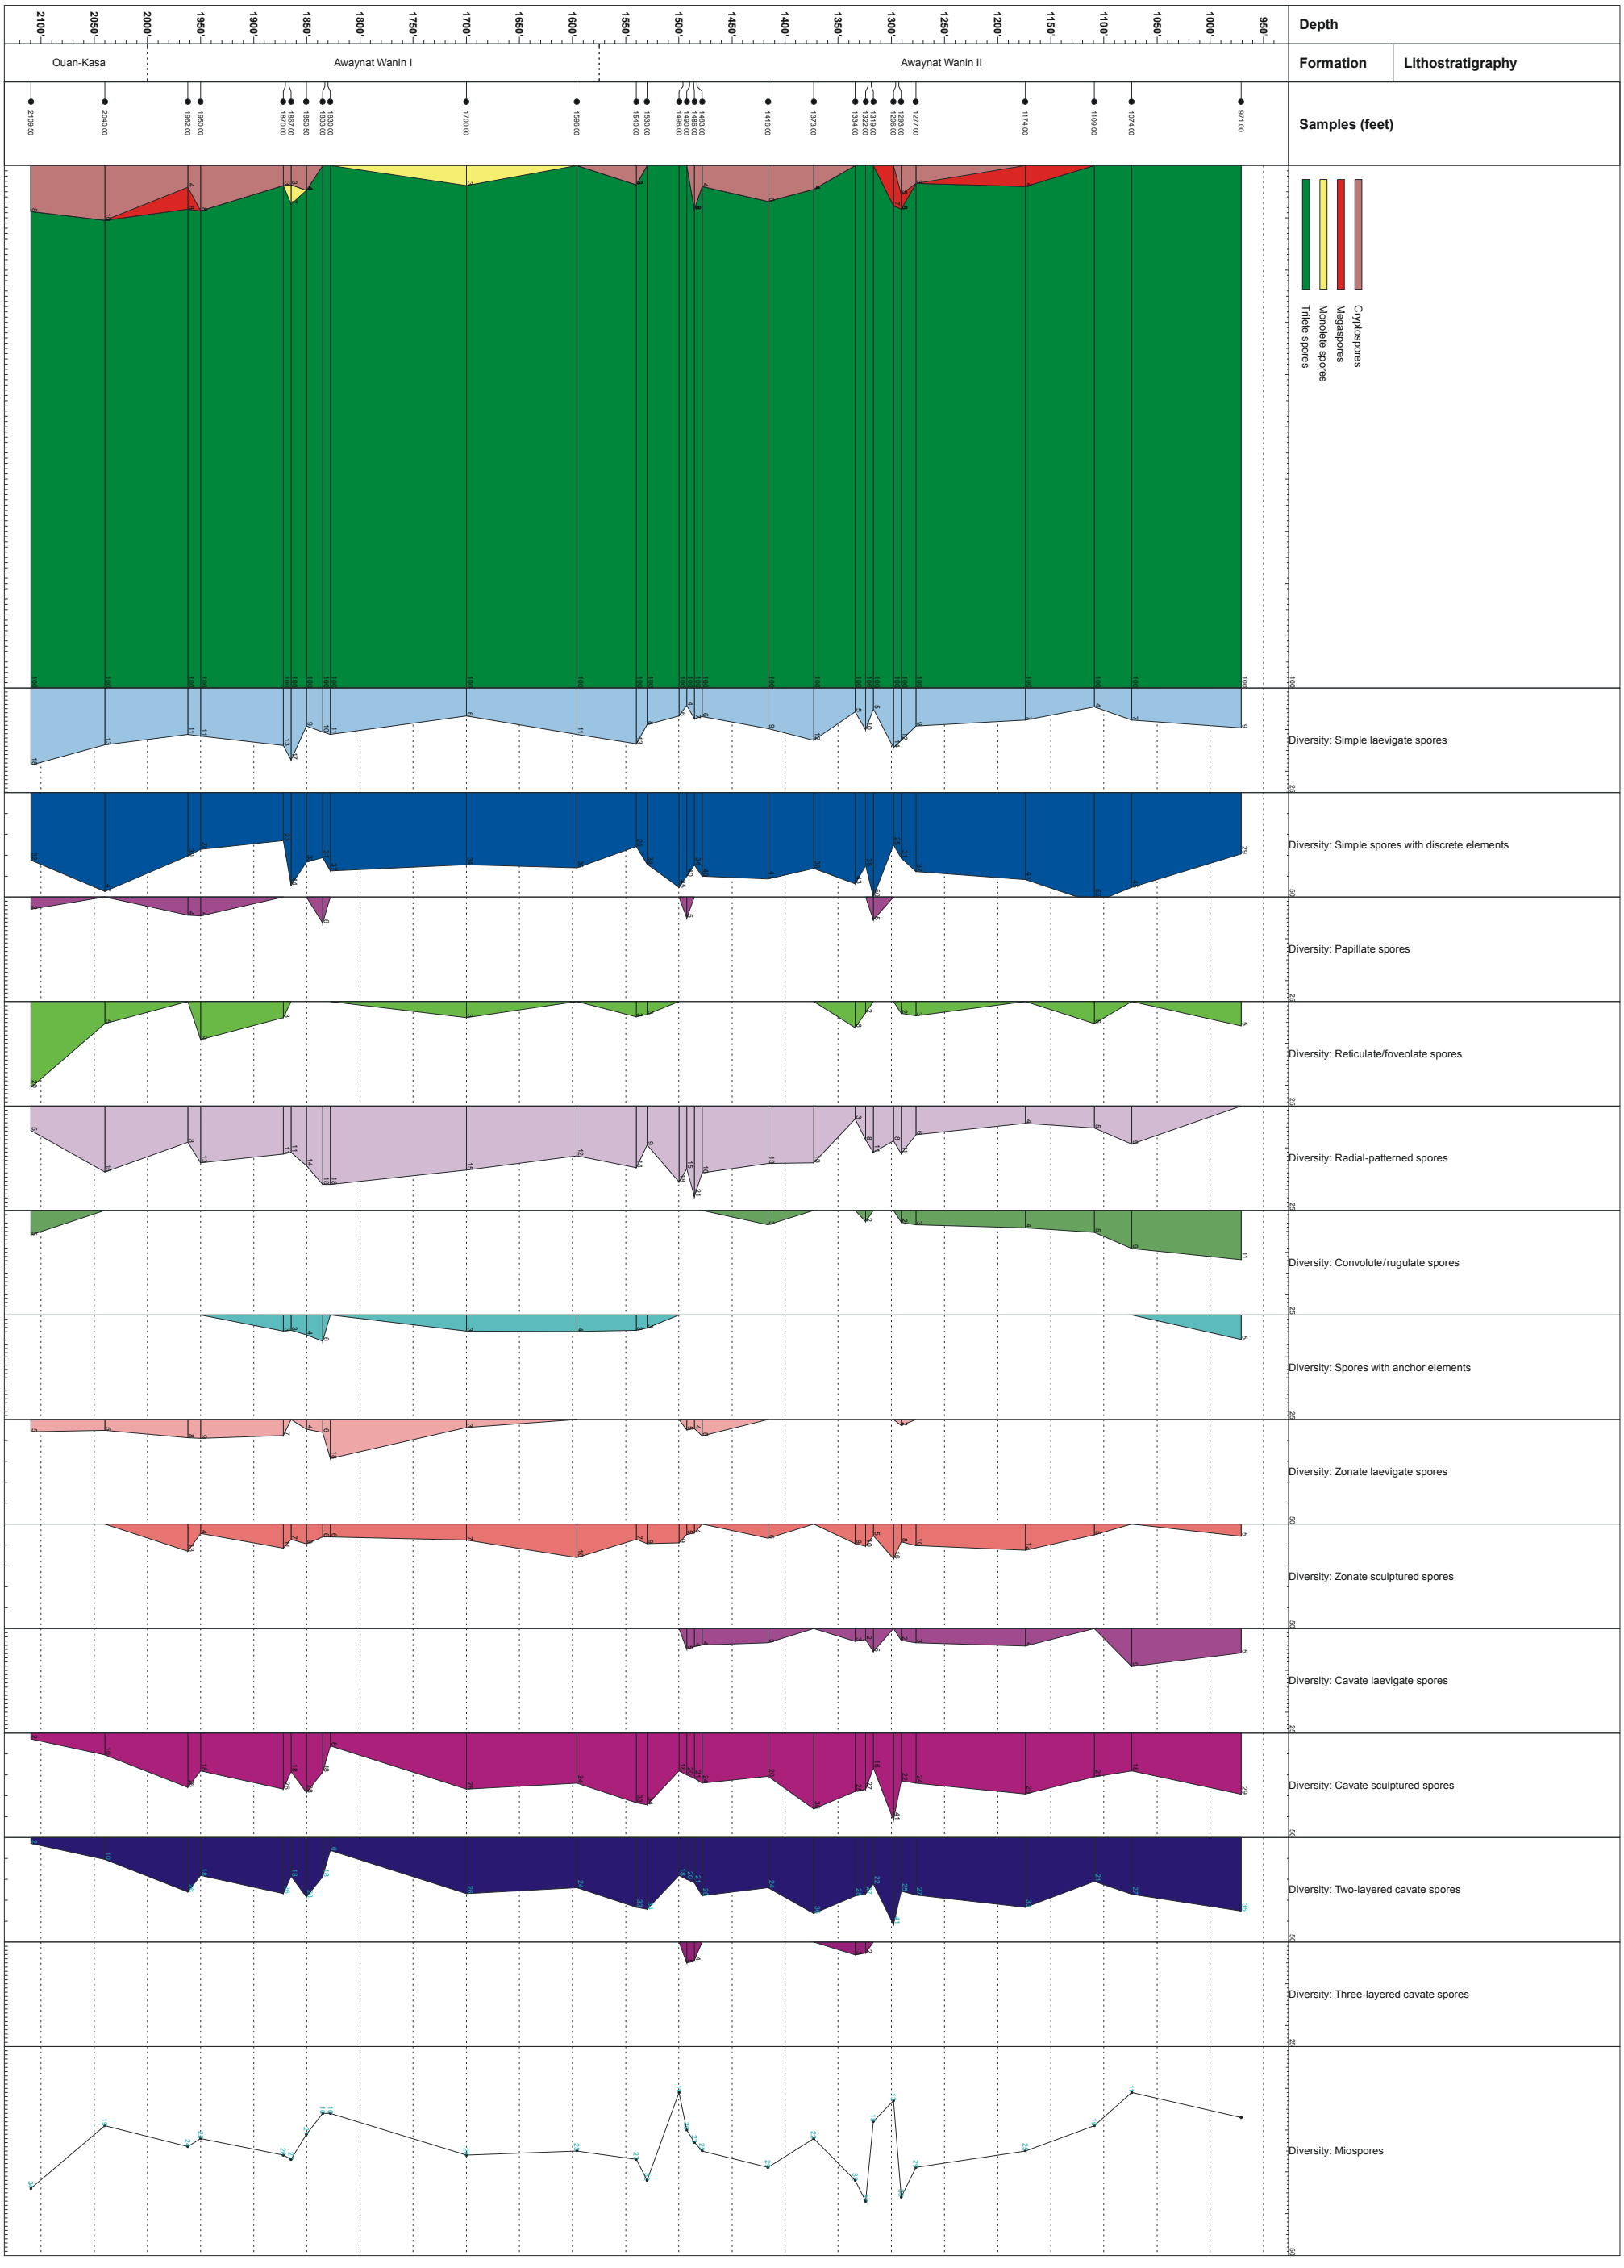

Fig. 3.6. Relative abundance of the main different miospore morphological groups encountered in borehole A1-69.

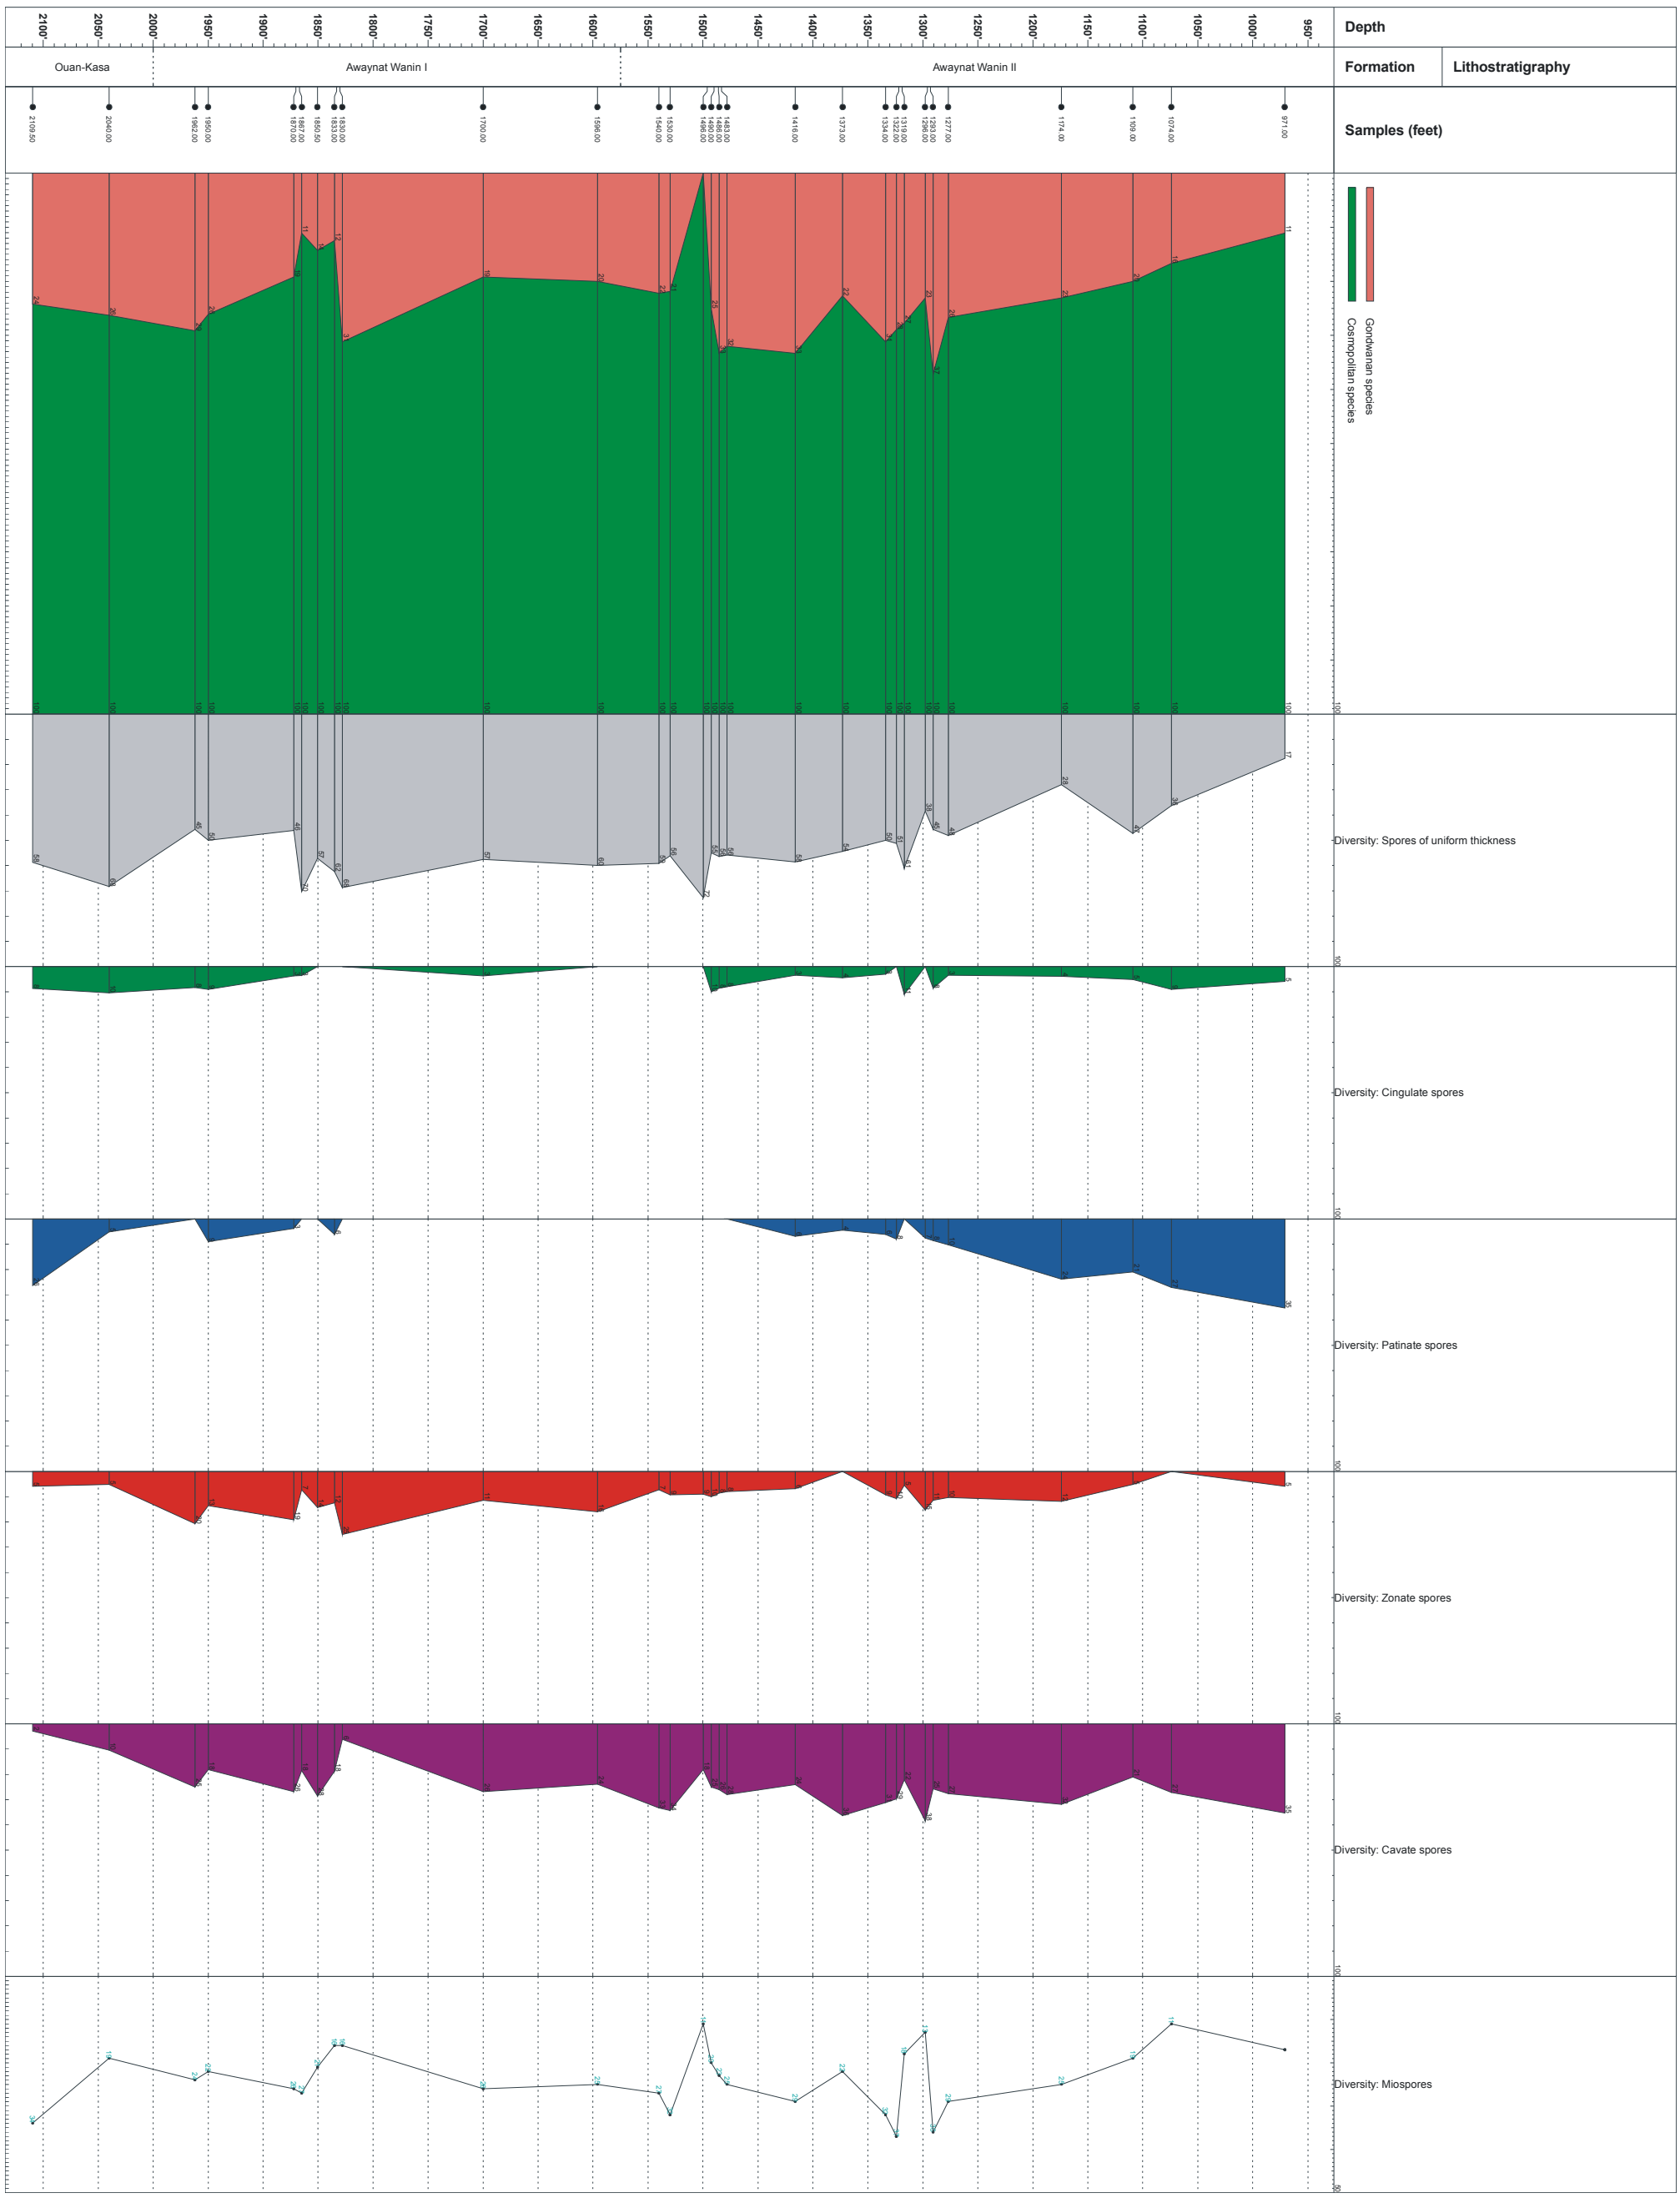

Fig. 3.7. Relative abundance of the miospore groups according to their palaeogeographic affinity in borehole A1-69 on the left and relative abundance of the different miospore structure groups.

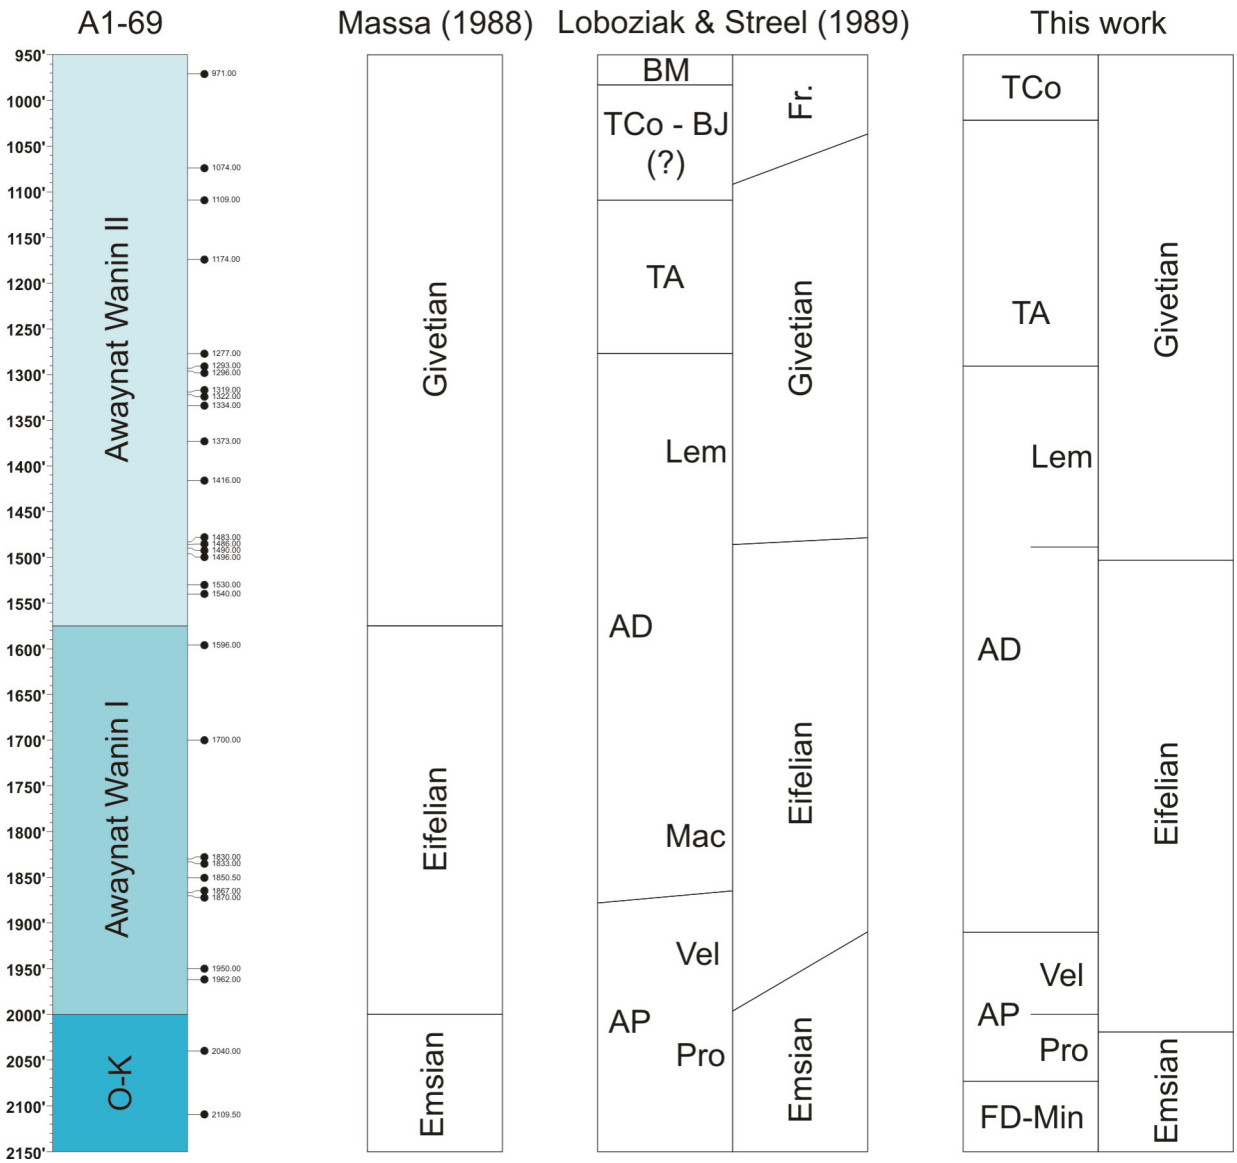

Fig. 3.8. Palynostratigraphic and chronostratigraphic charts for borehole A1-69.

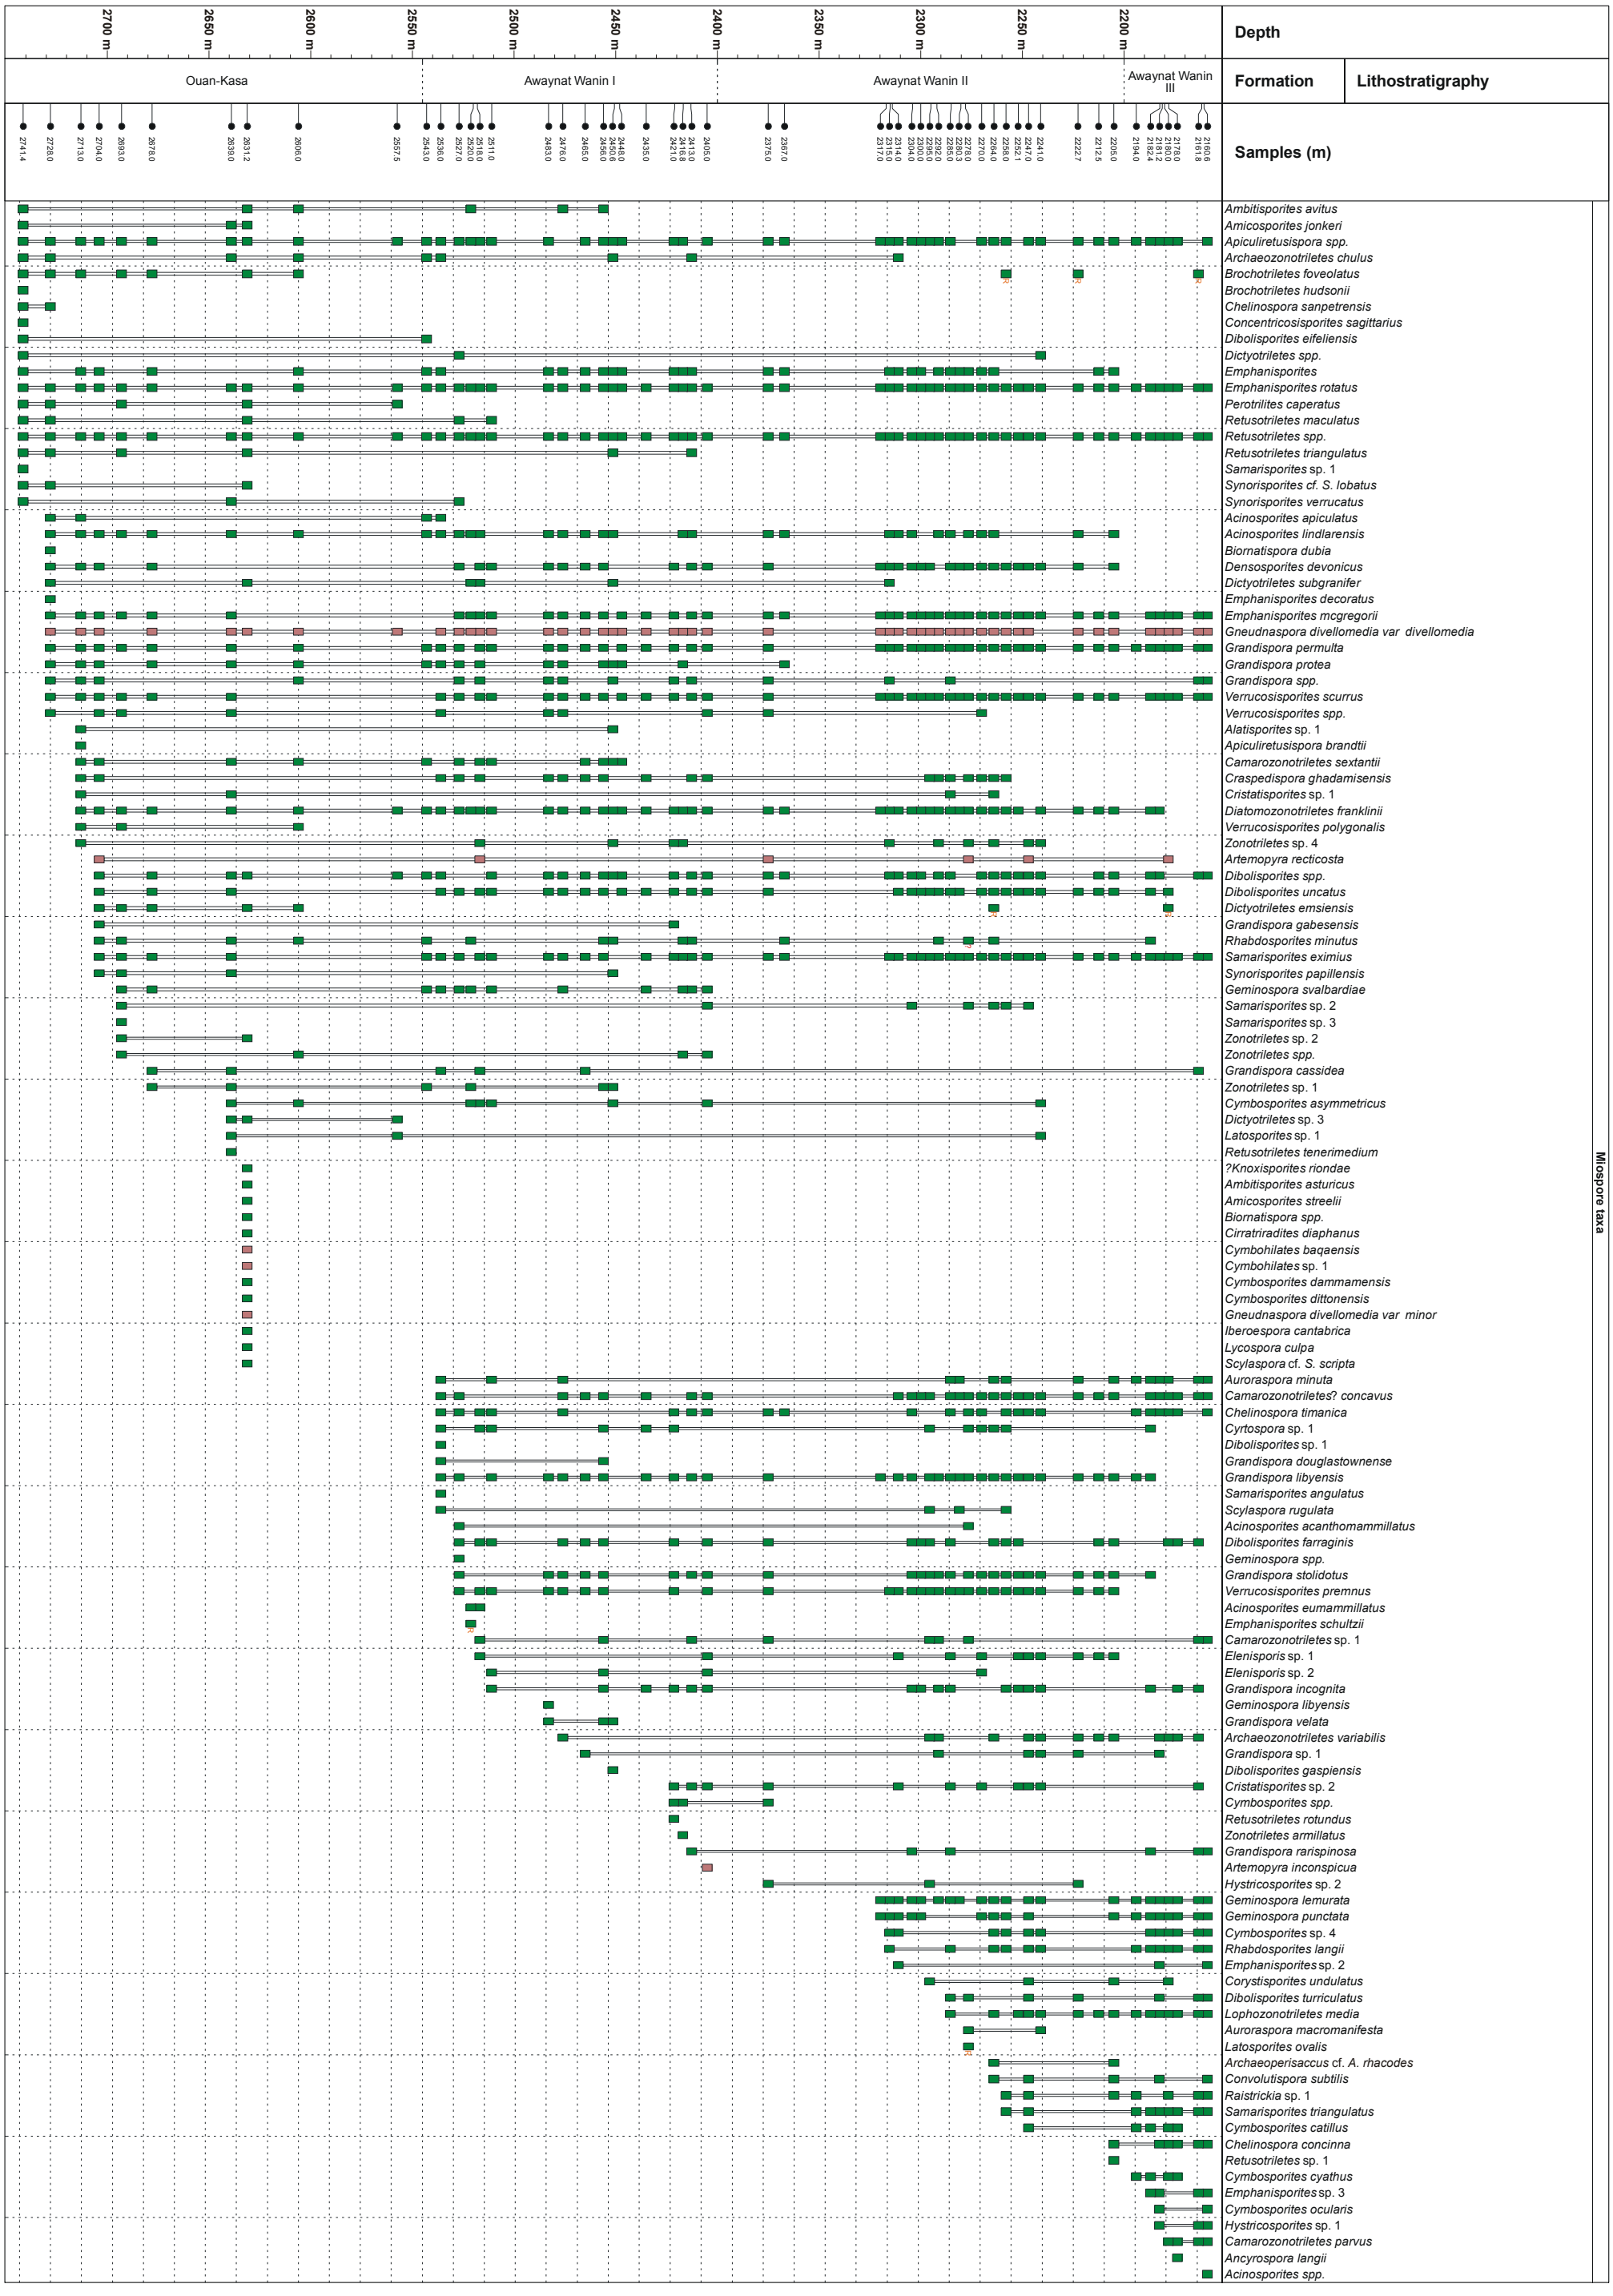

Fig. 3.9. Stratigraphic ranges of miospores encountered in borehole MG-1.

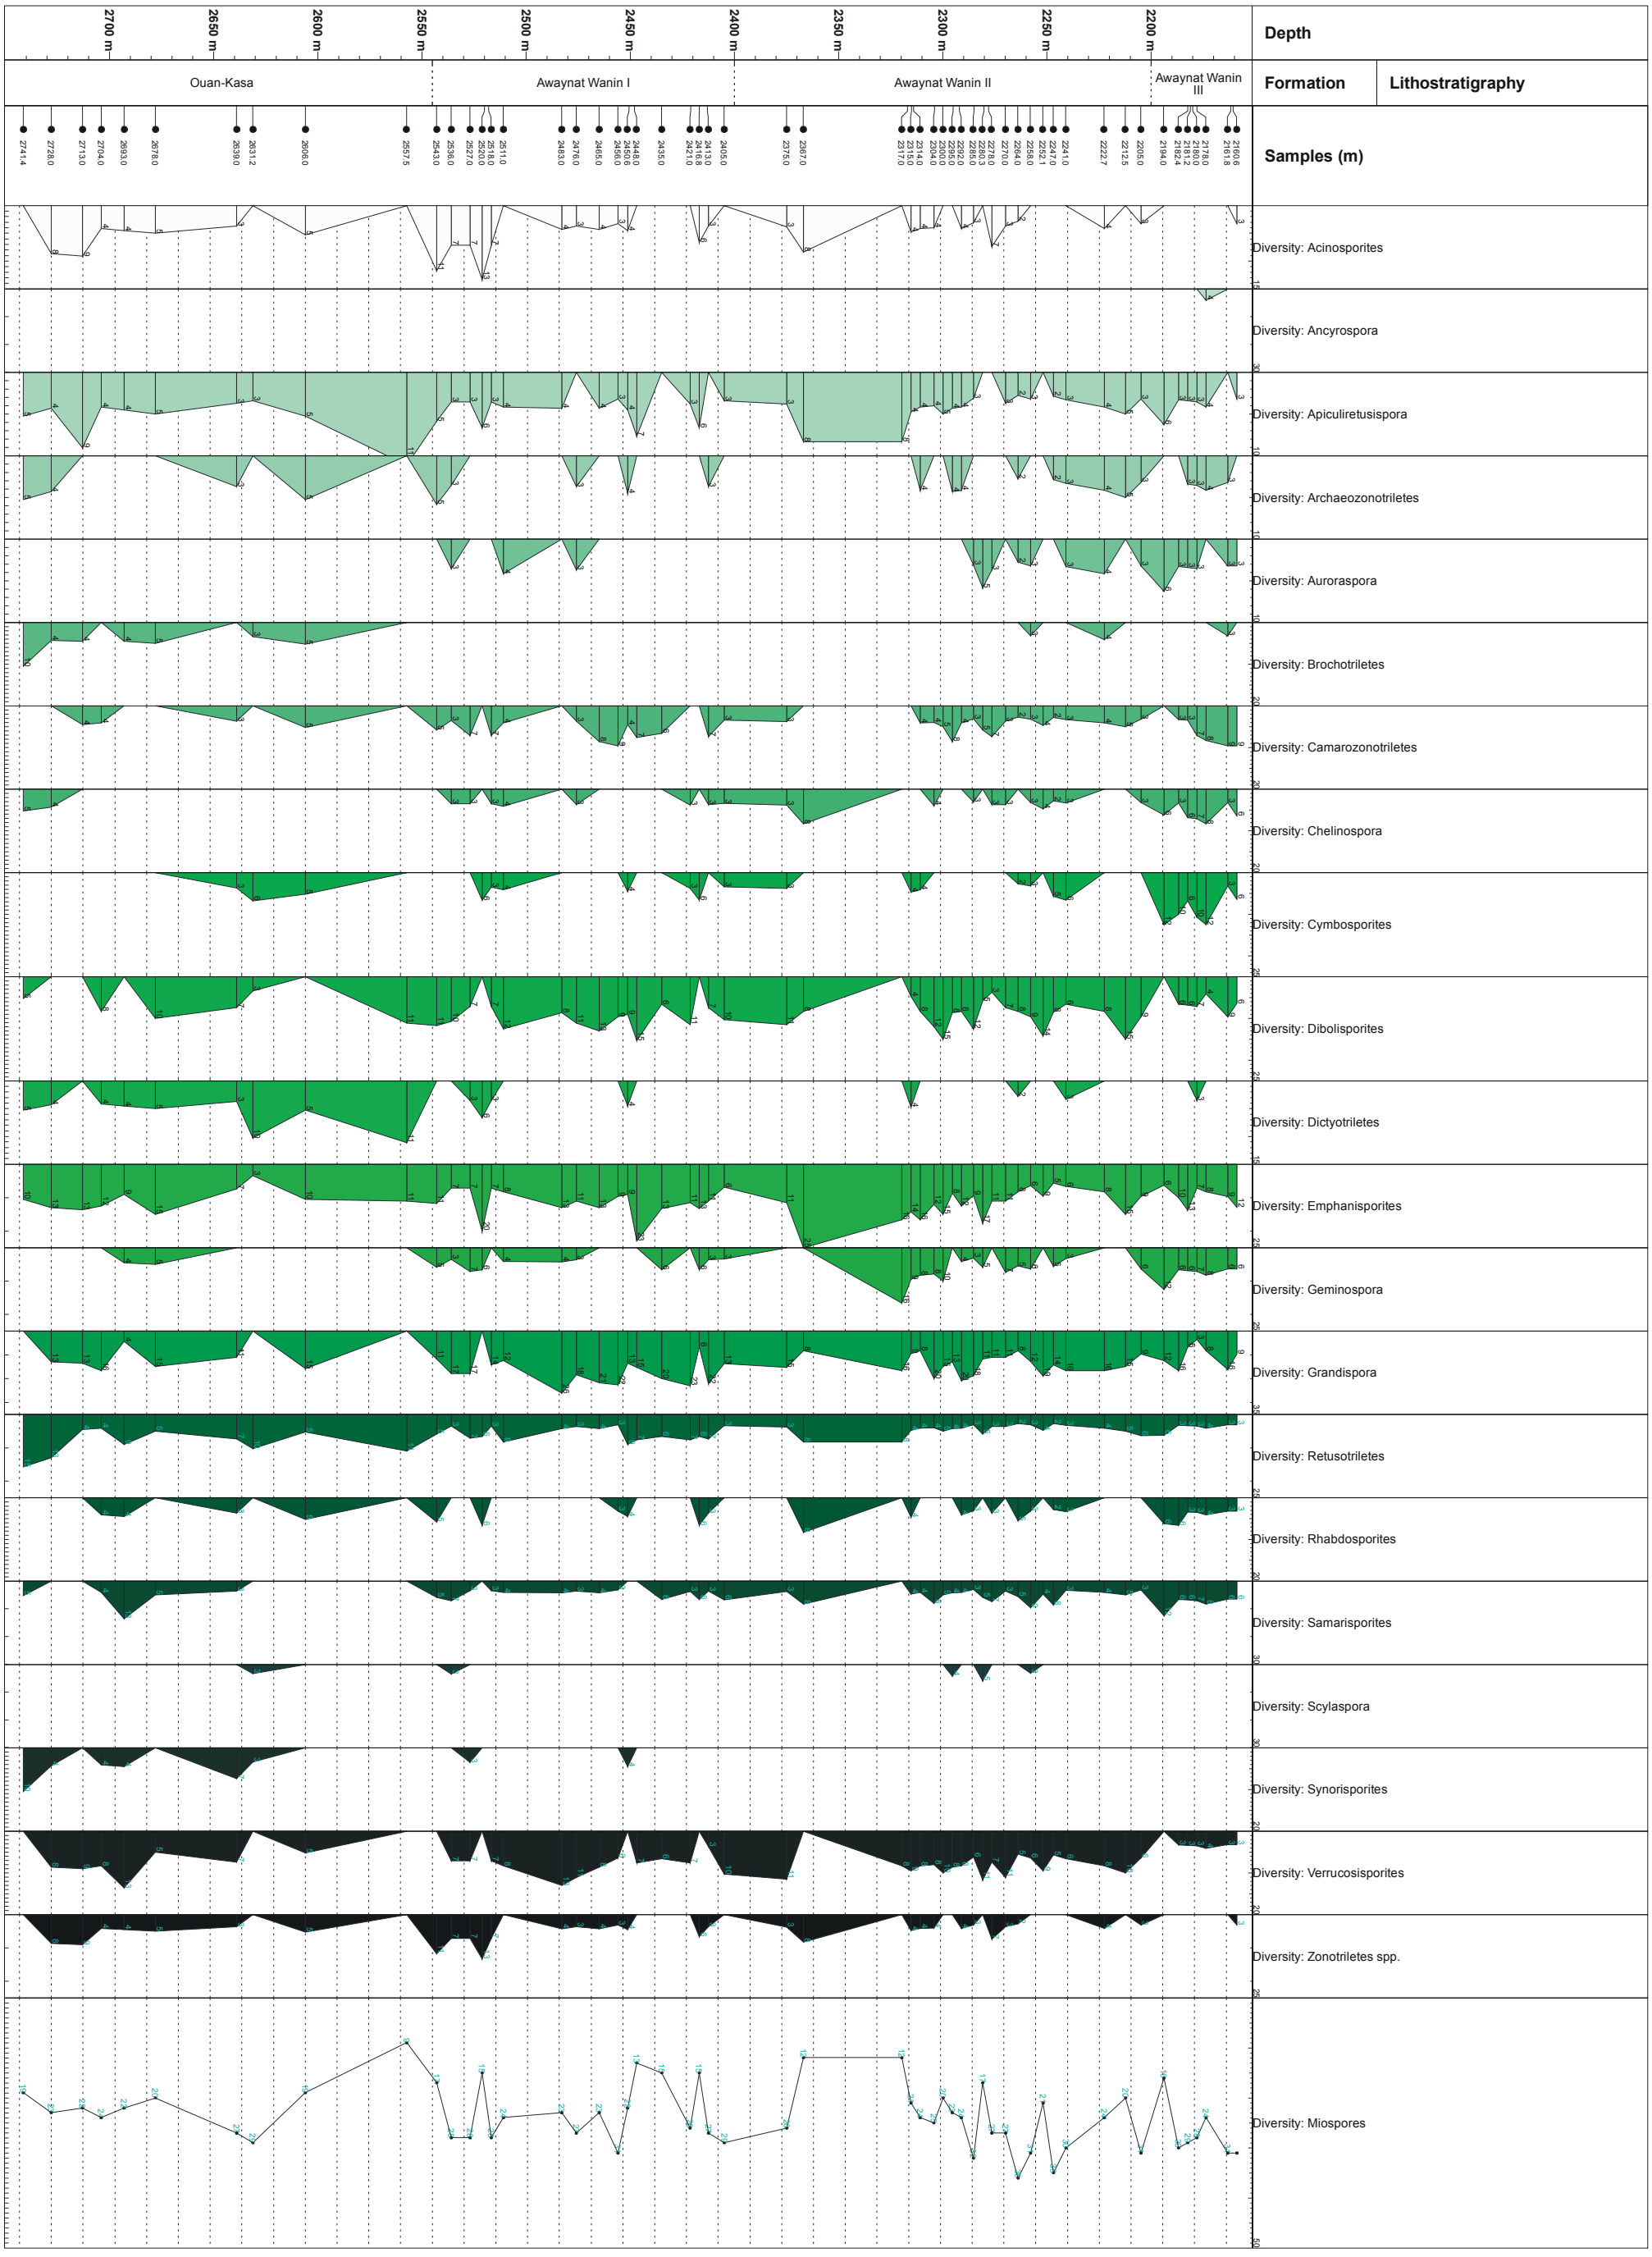

Fig. 3.10. Relative abundance of the main miospore genera encountered in borehole MG-1.

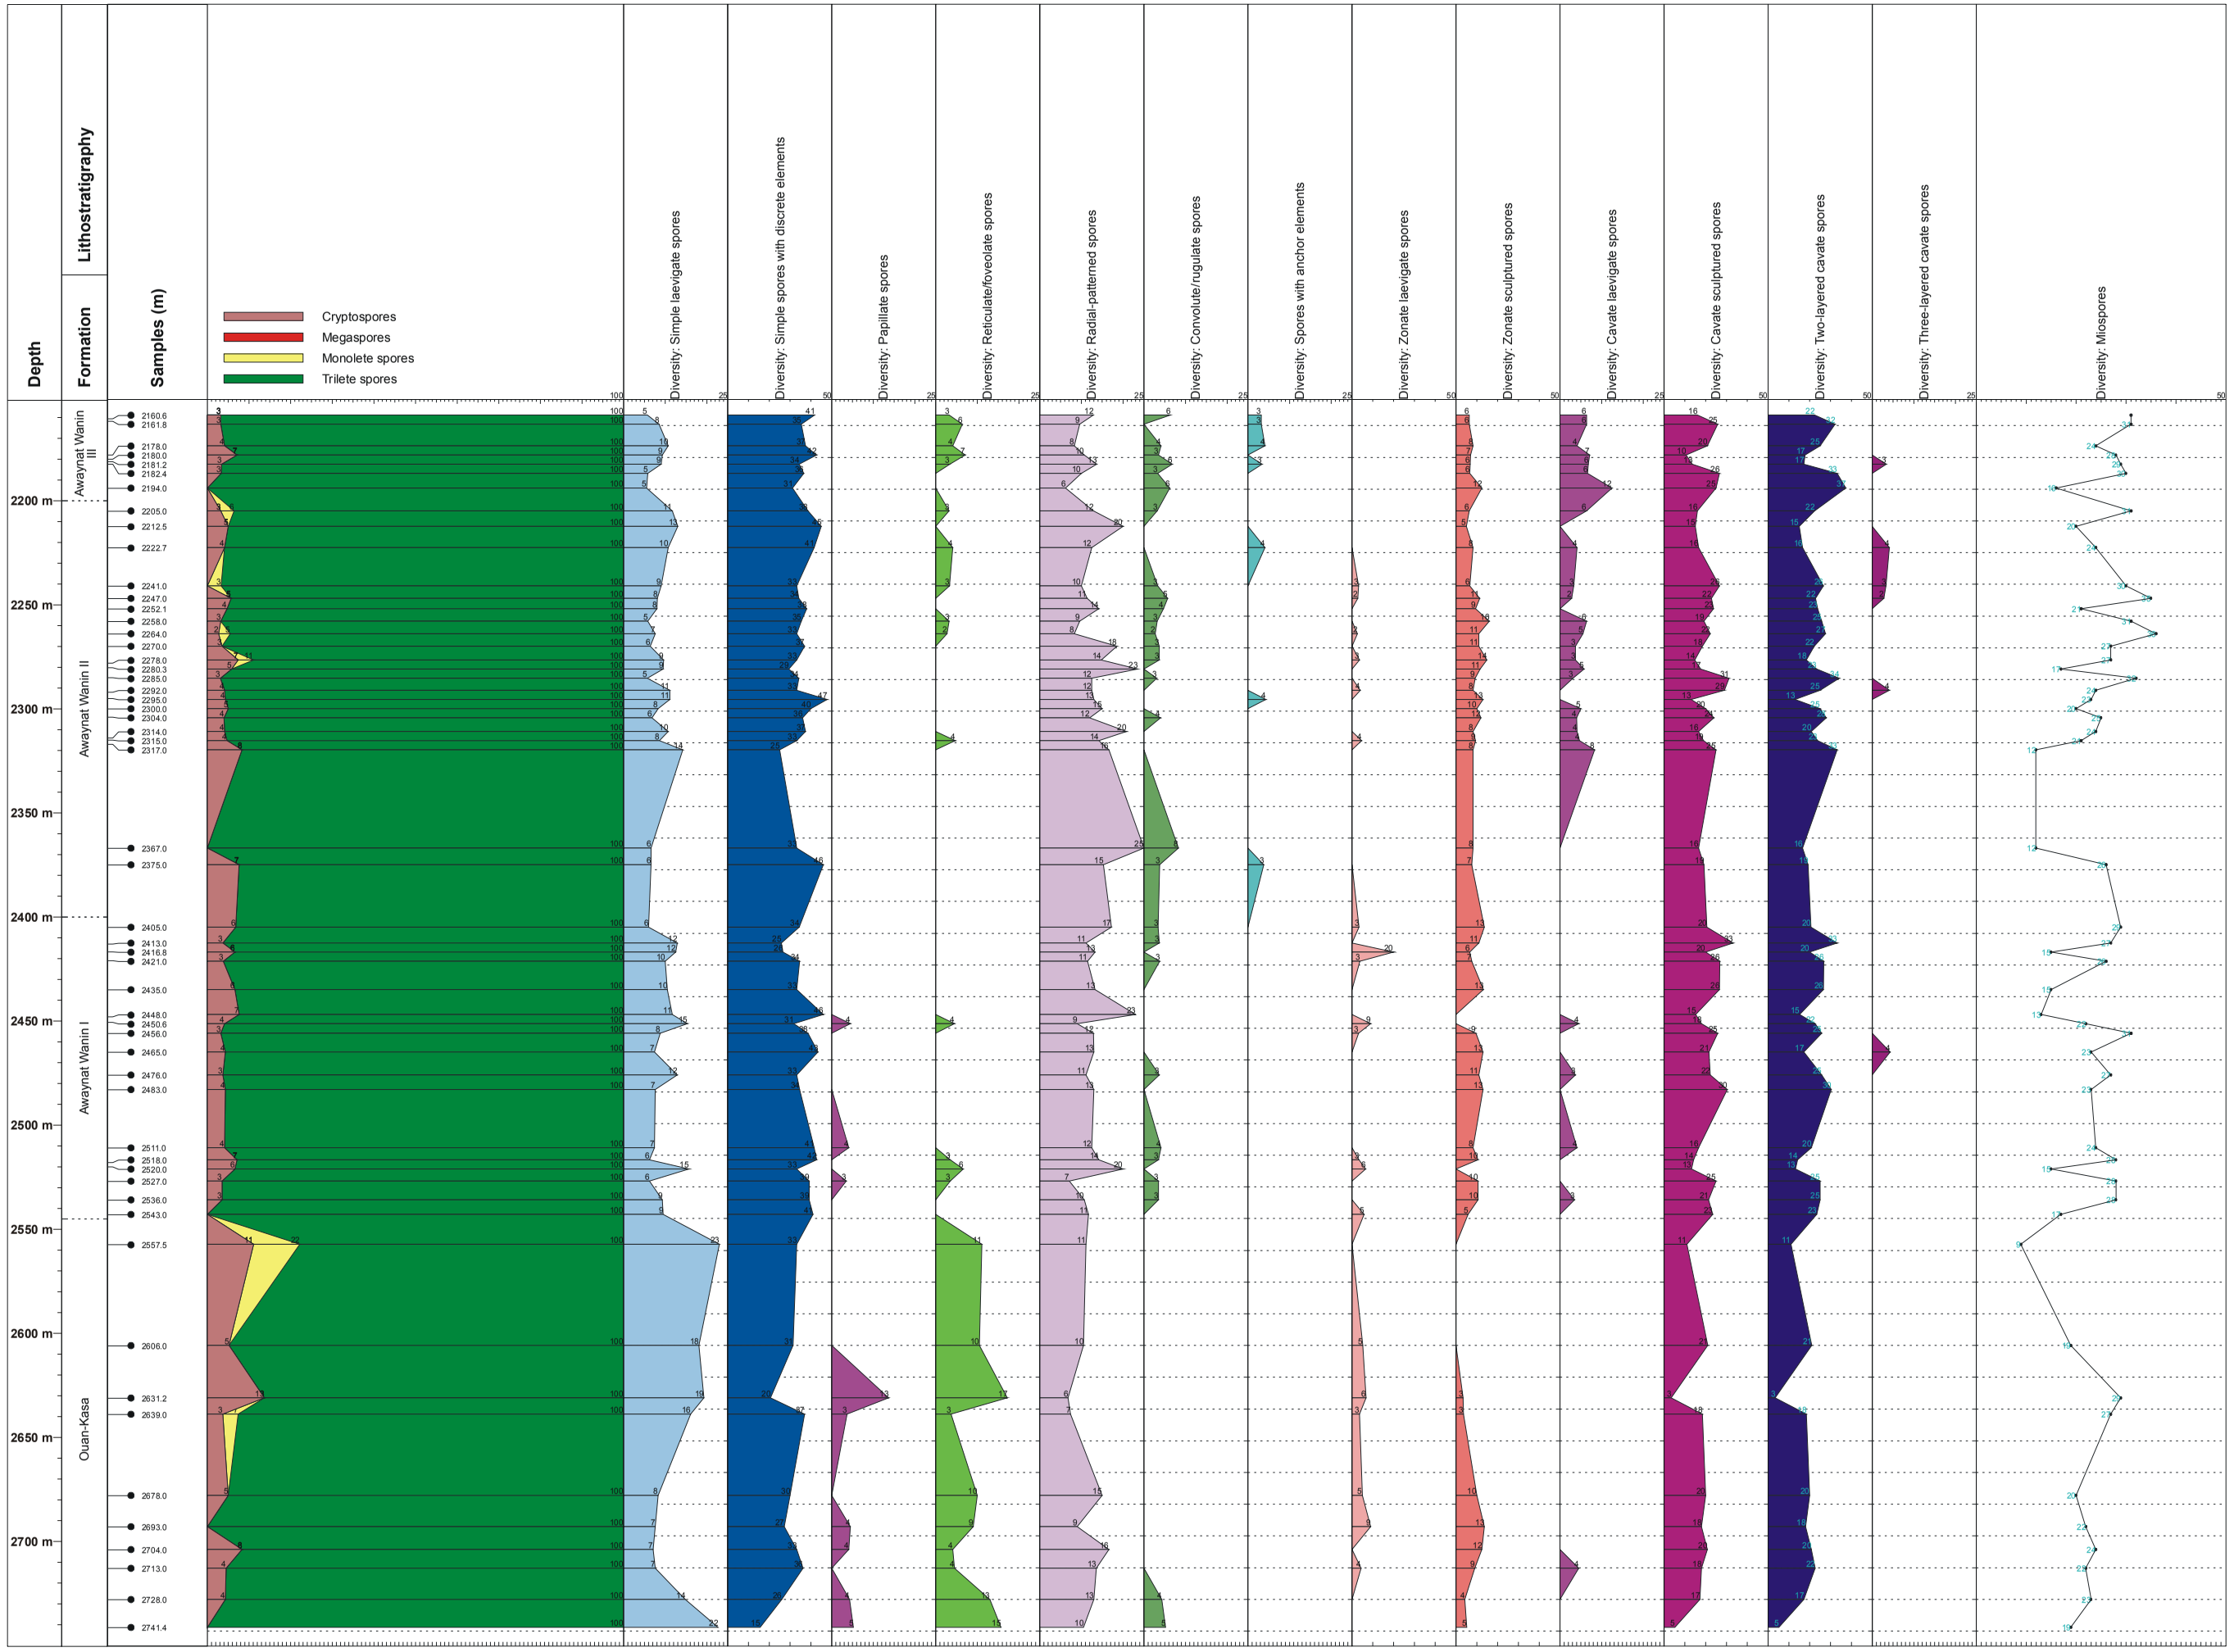

Fig. 3.11. Relative abundance of the main different miospore morphological groups encountered in borehole MG-1.

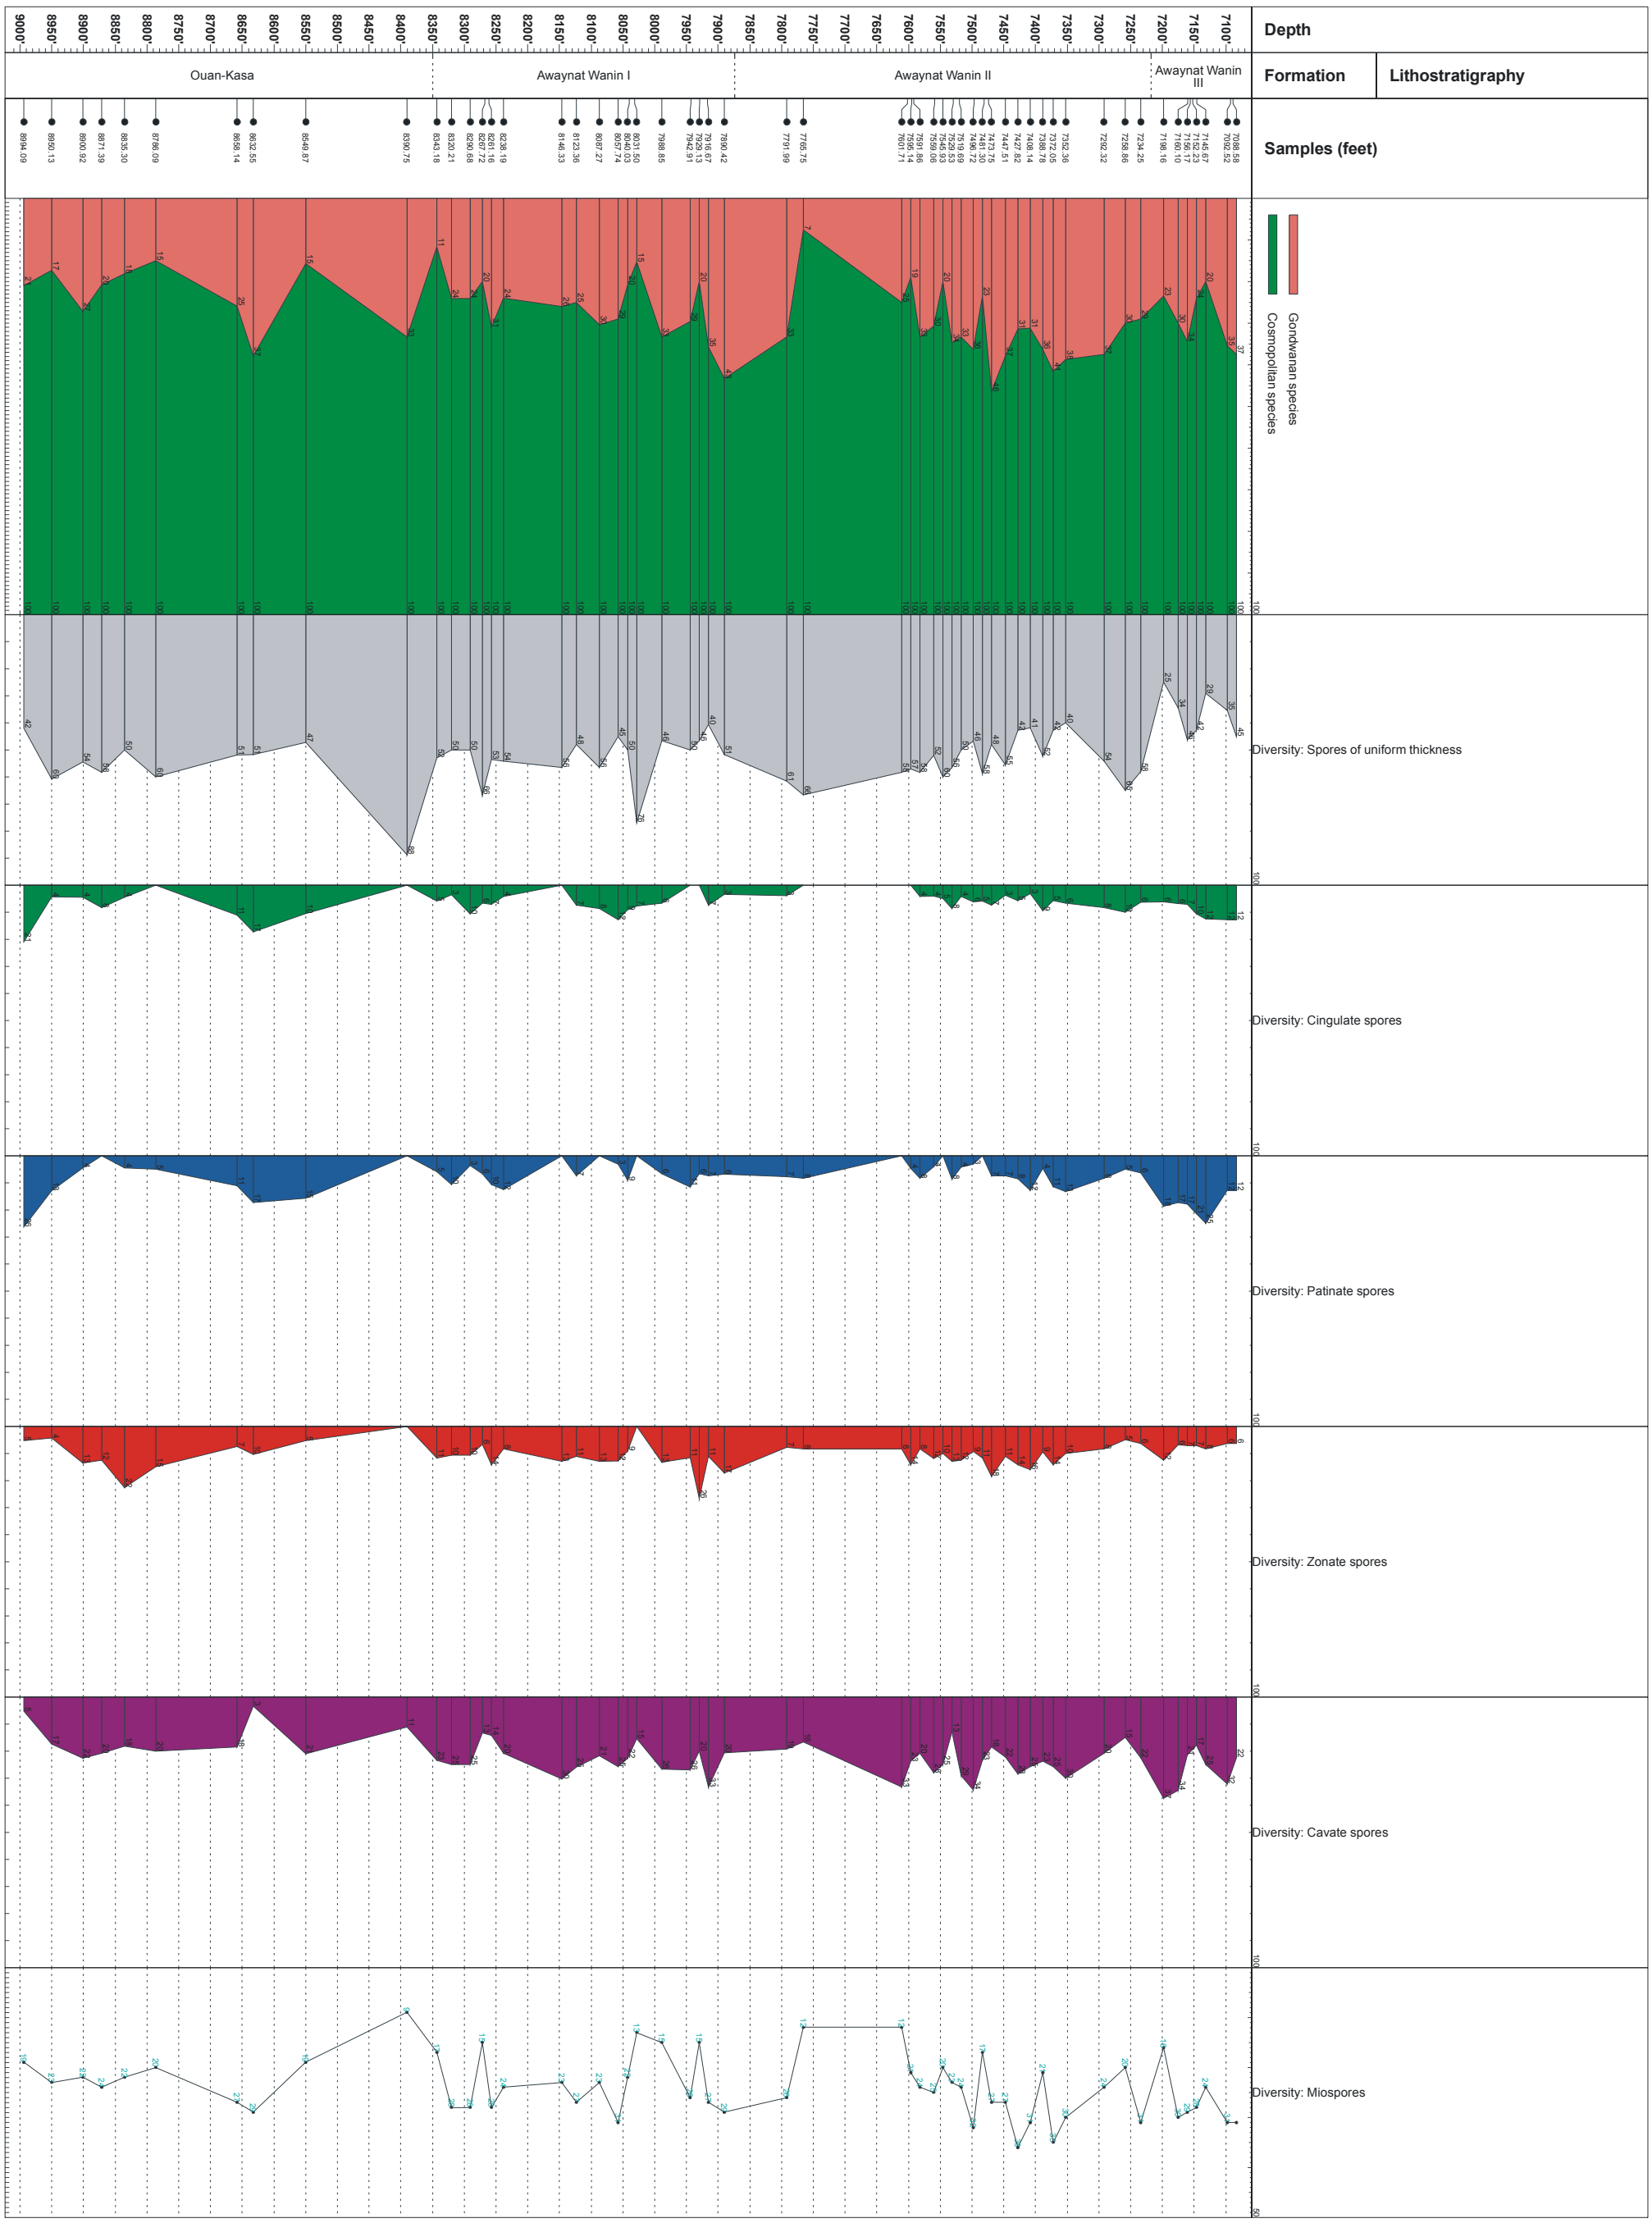

Fig. 3.12. Relative abundance of the miospore groups according to their palaeogeographic affinity in borehole MG-1 on the left and relative abundance of the different miospore structure groups.

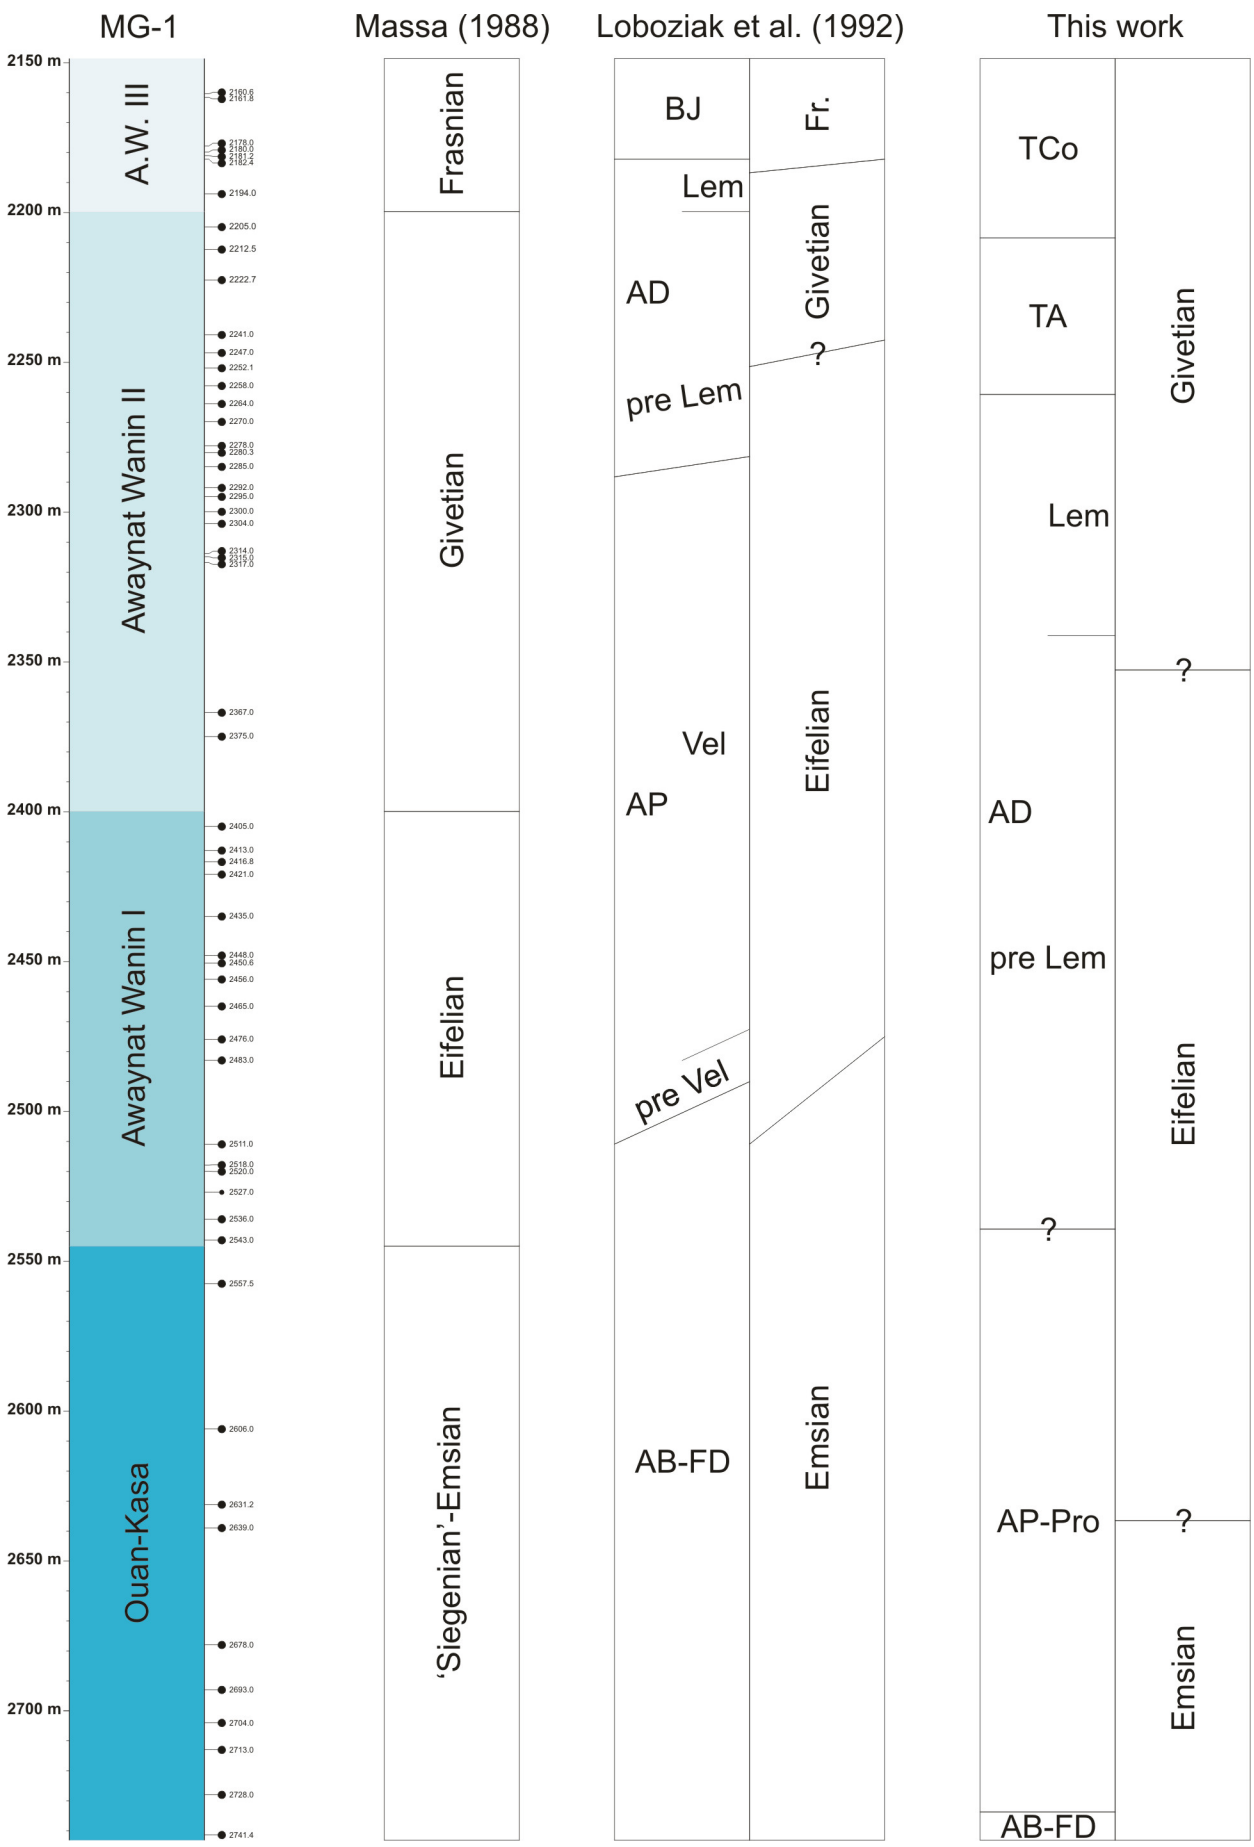

Fig. 3.13. Palynostratigraphic and chronostratigraphic charts for borehole MG-1.

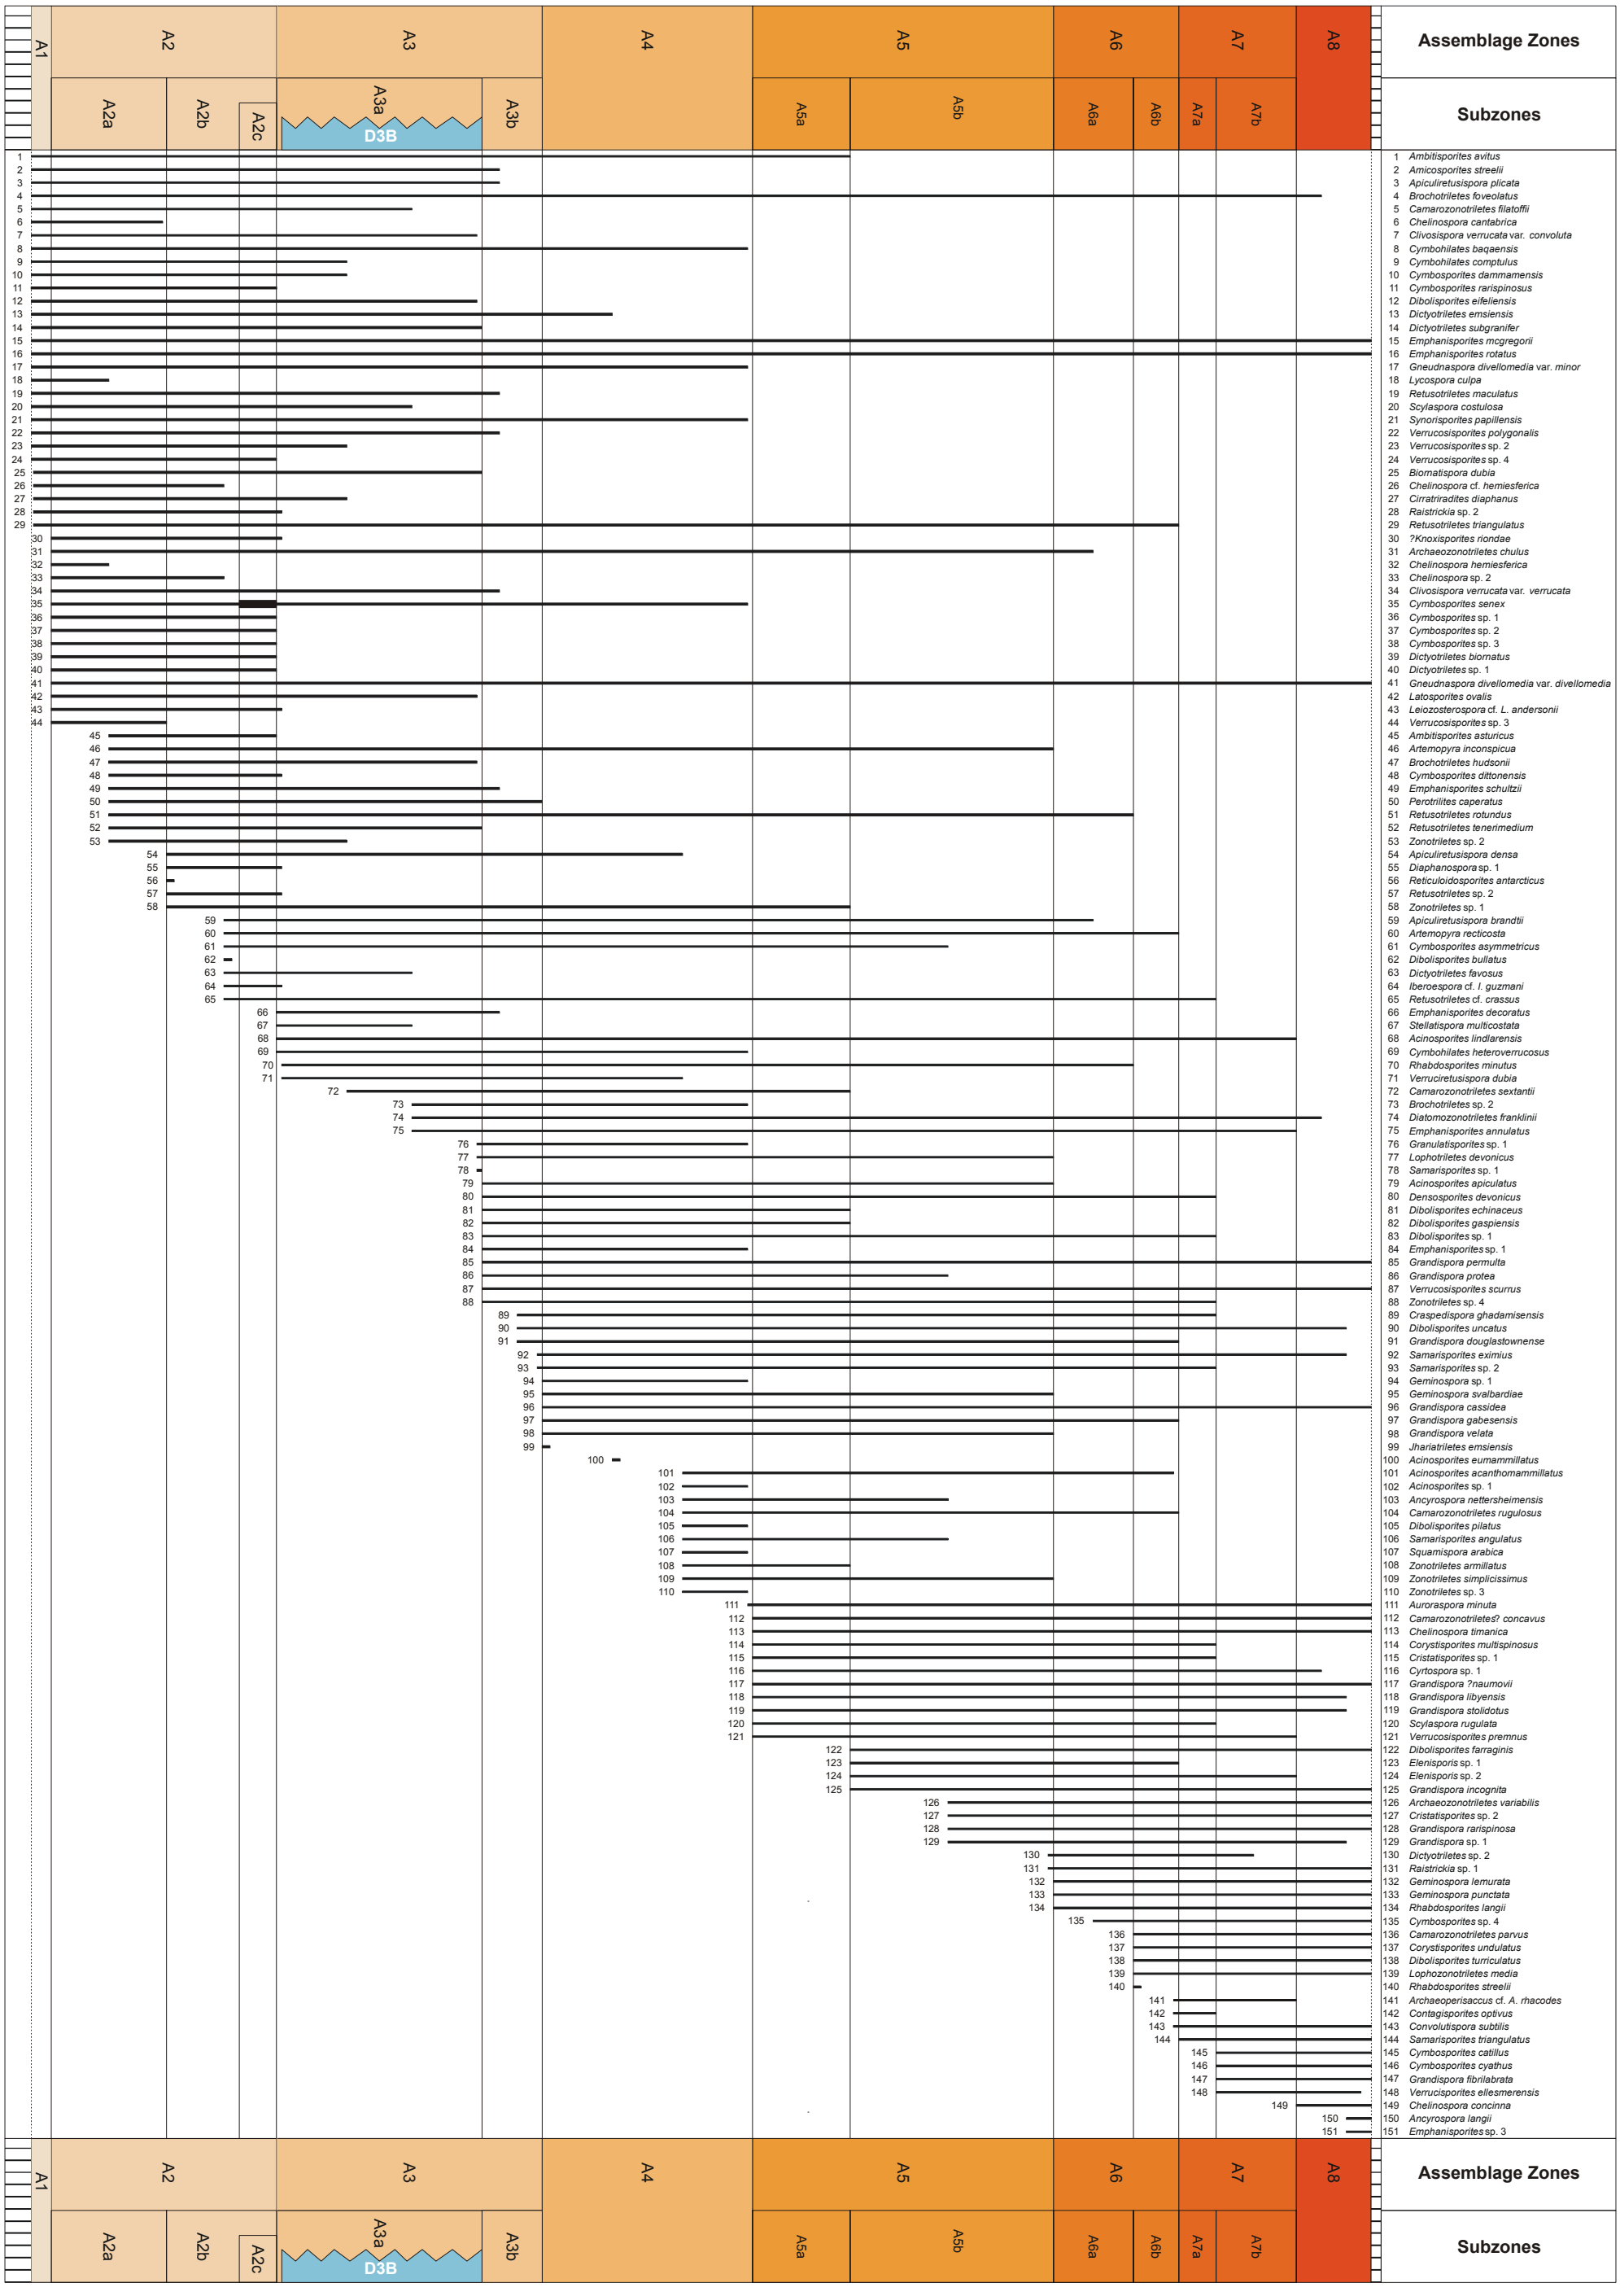

Fig. 4.1. Composite stratigraphic chart of the main miospore taxa.

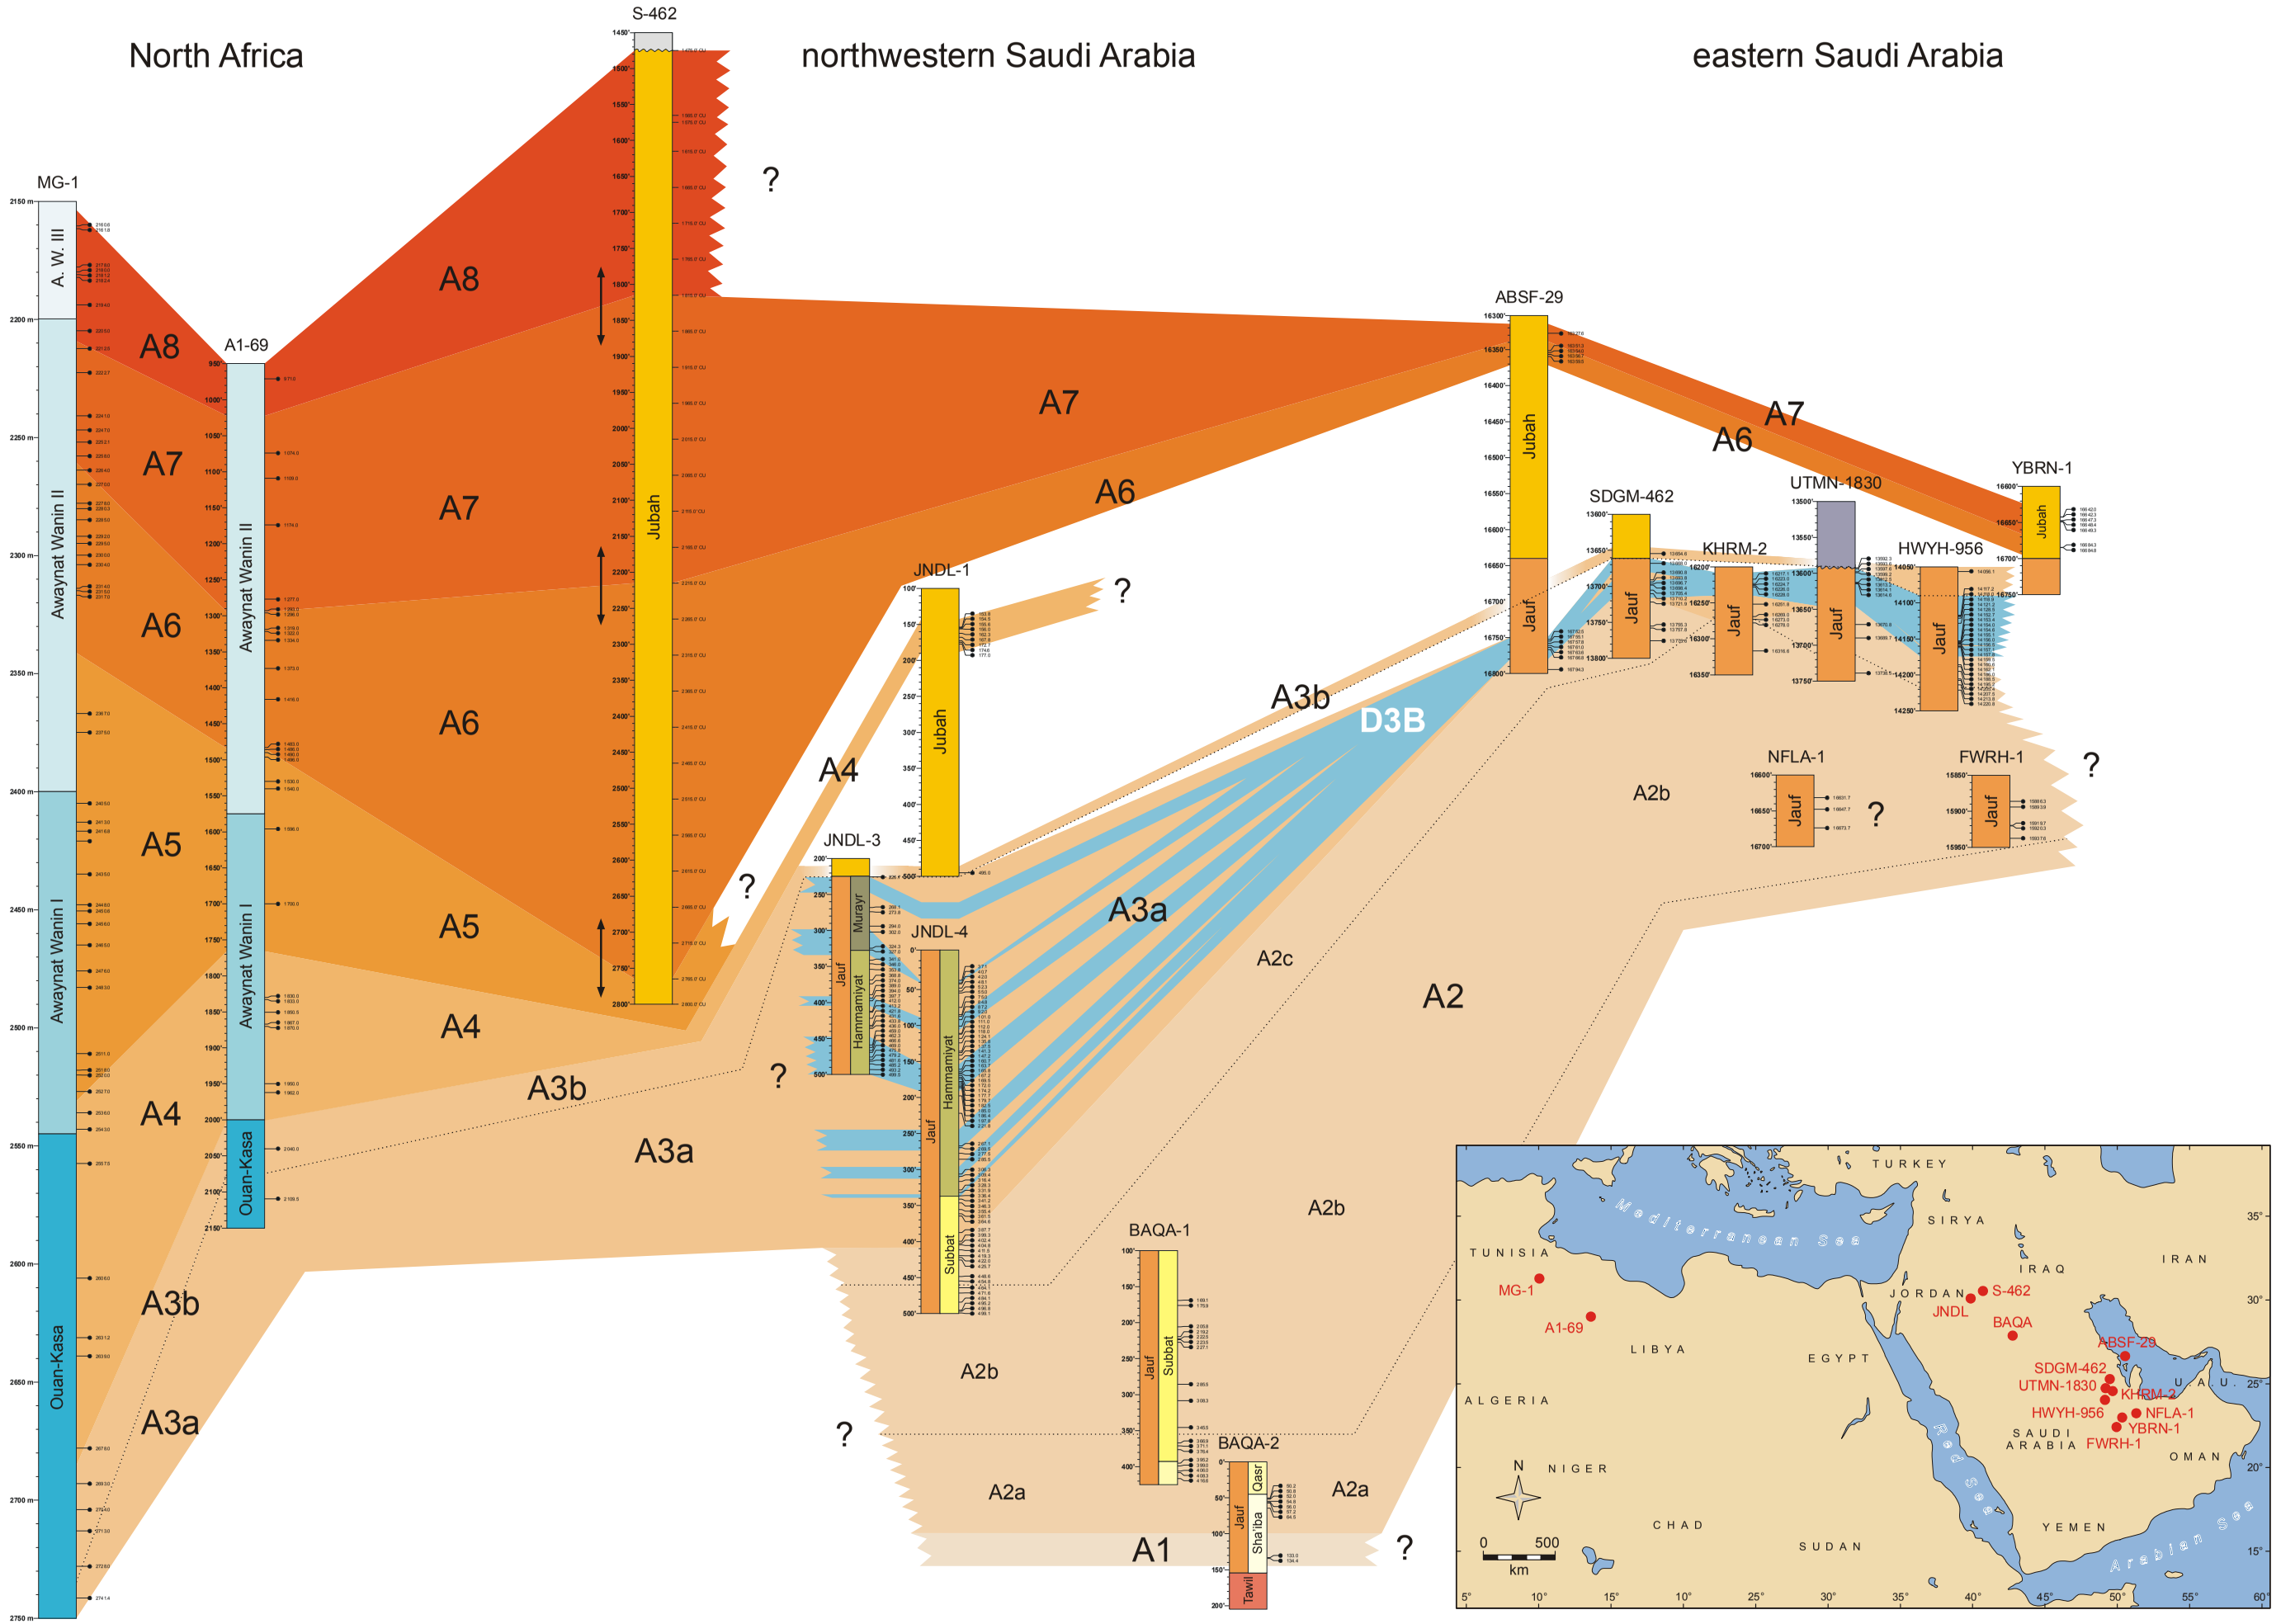

Fig. 4.2. Correlation between the studied sections on the basis of miospore assemblages.

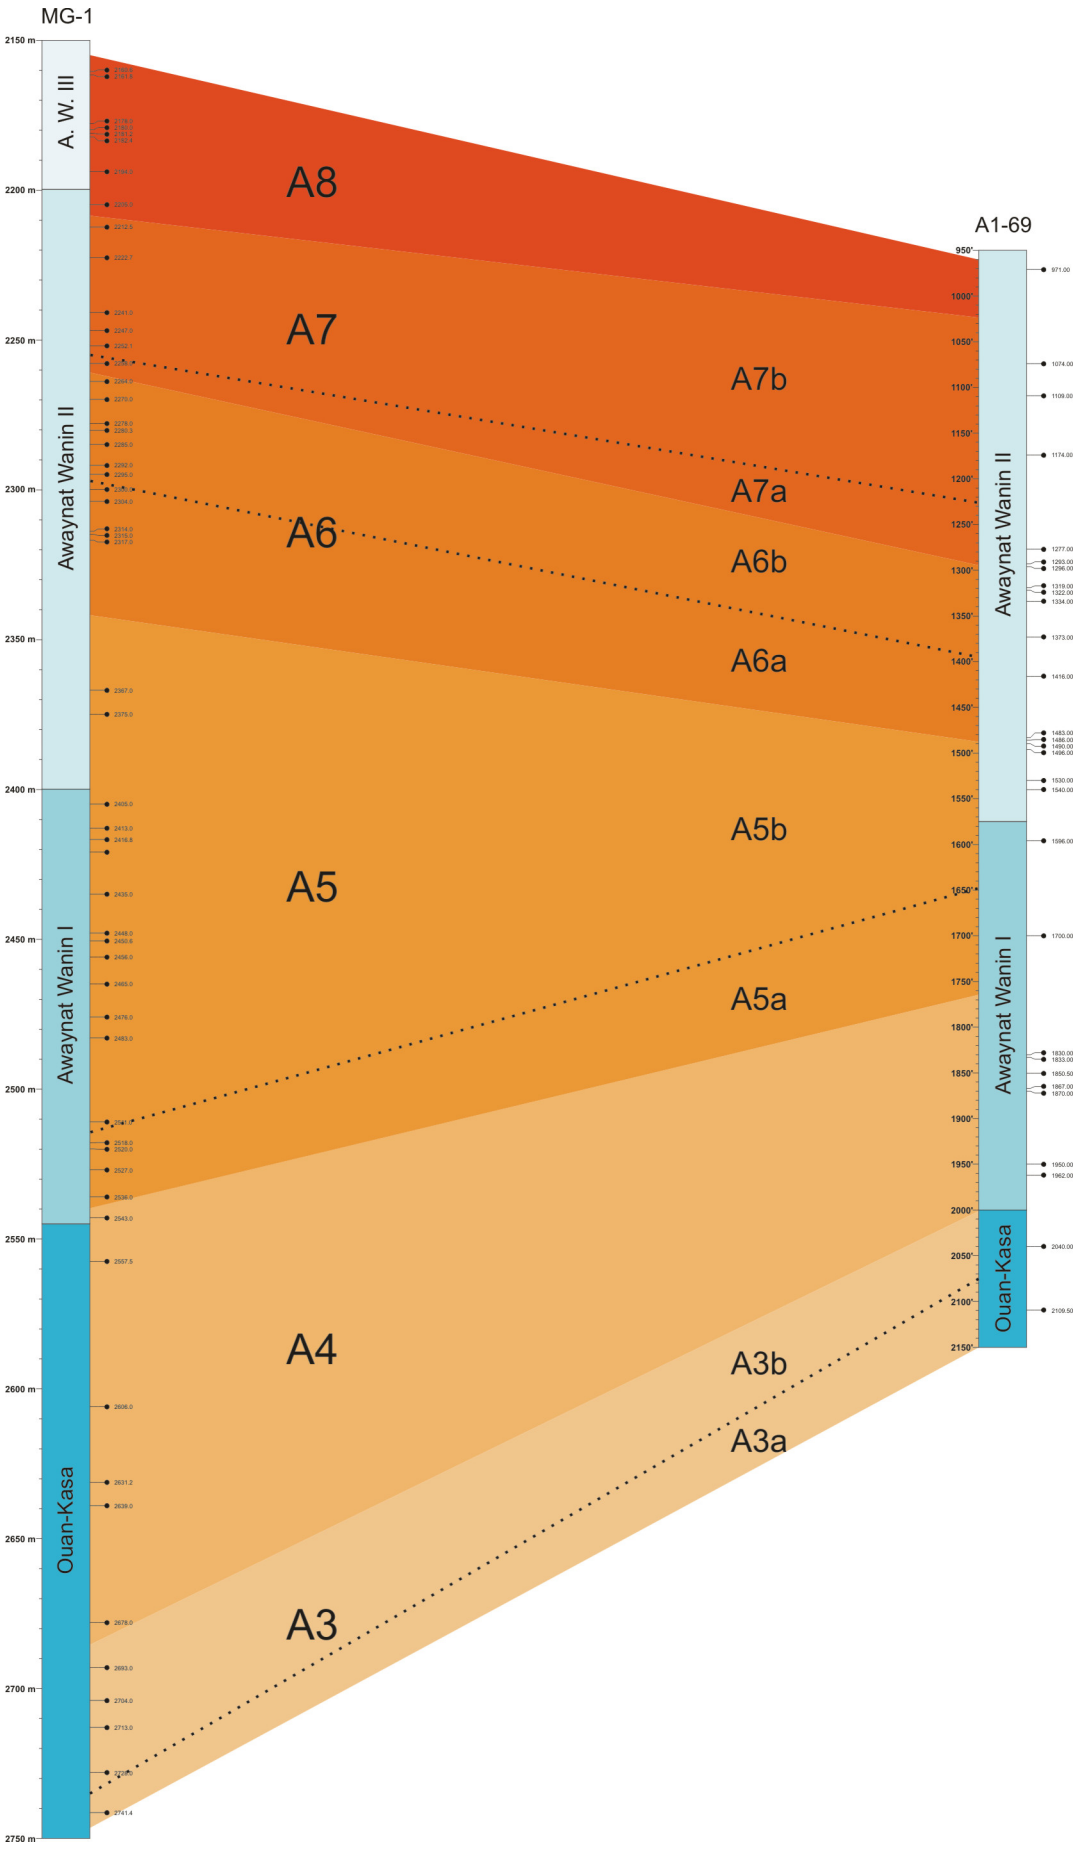

Fig. 4.3. Correlation in North Africa on the basis of the new biozonation.

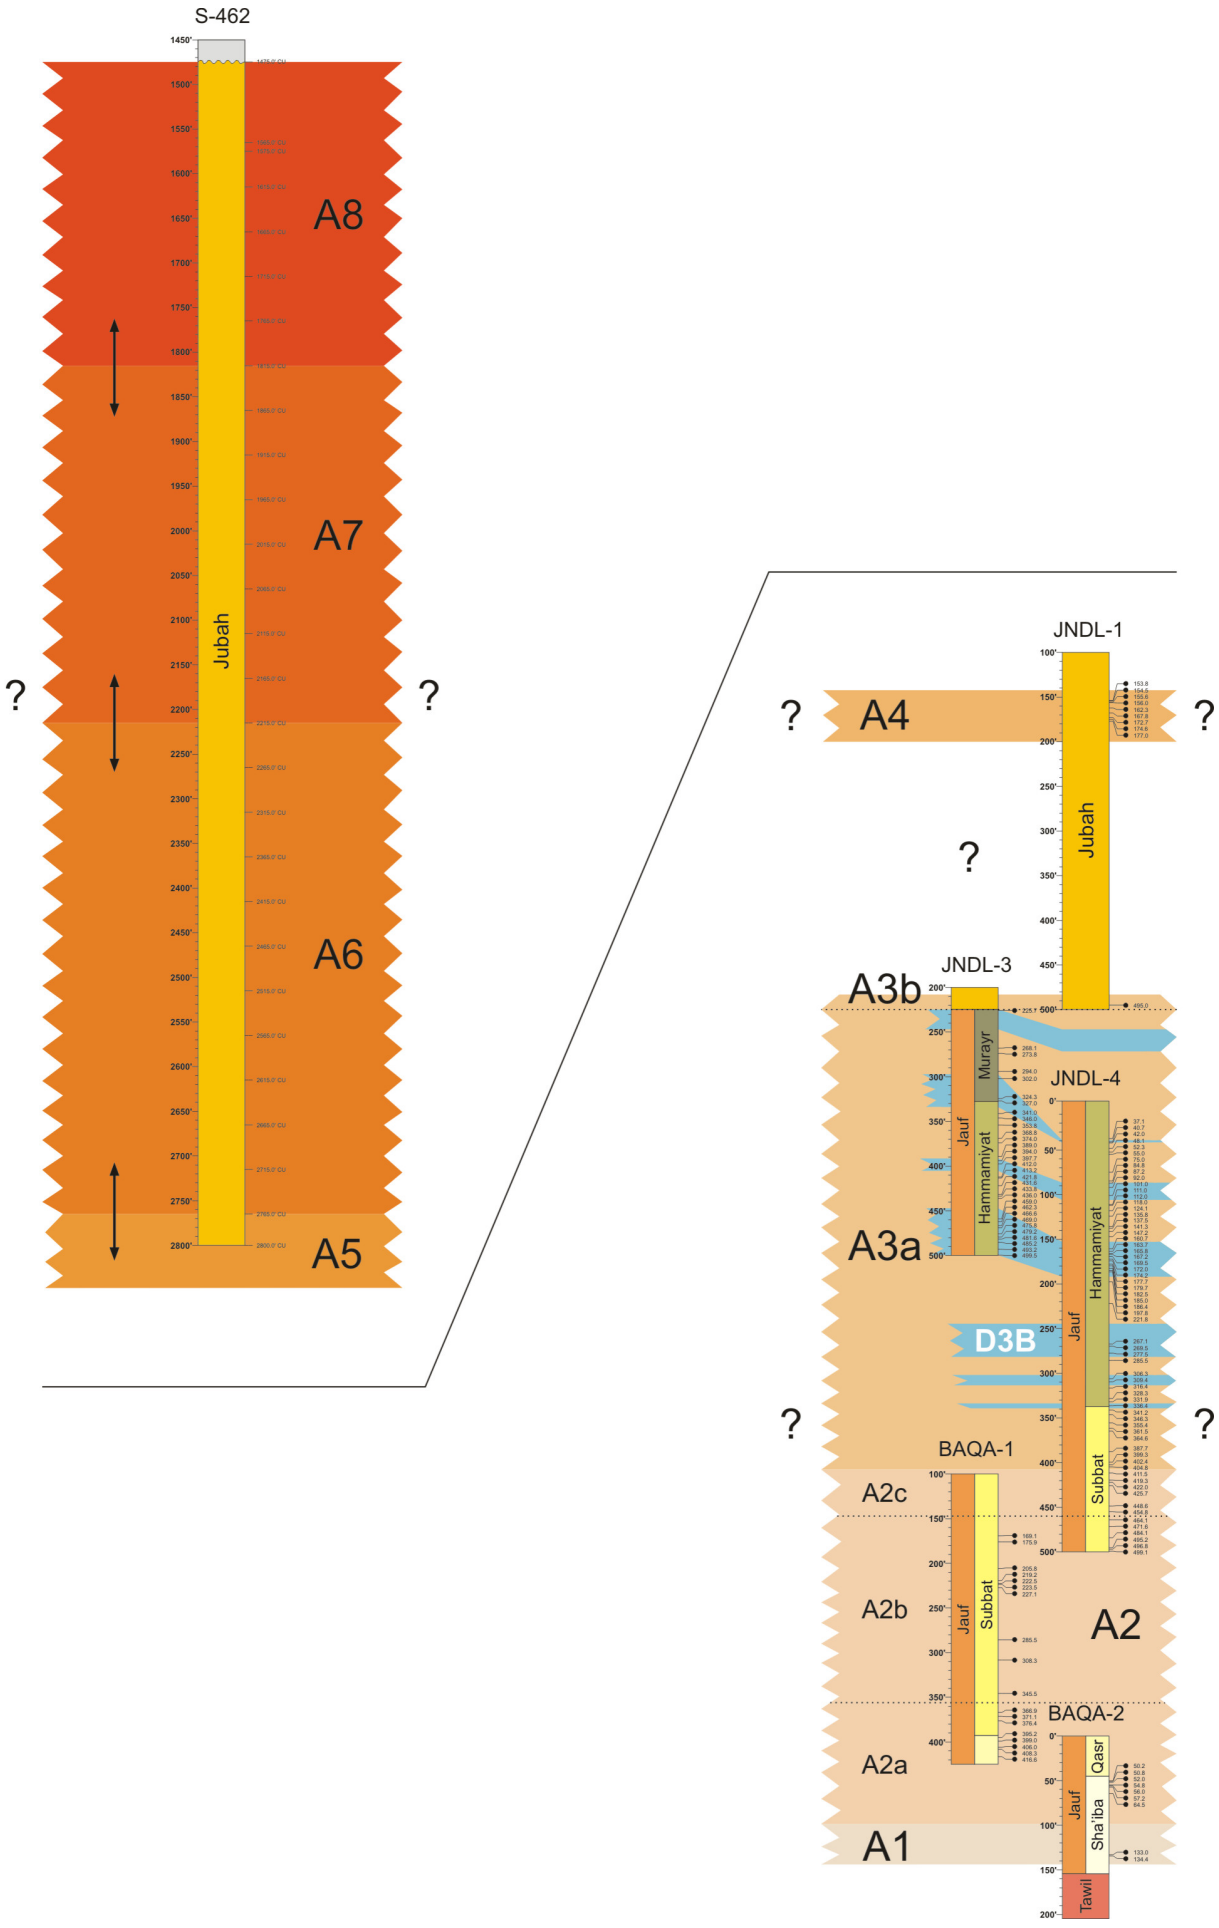

Fig. 4.4. Correlation in northwestern Saudi Arabia on the basis of the new biozonation.

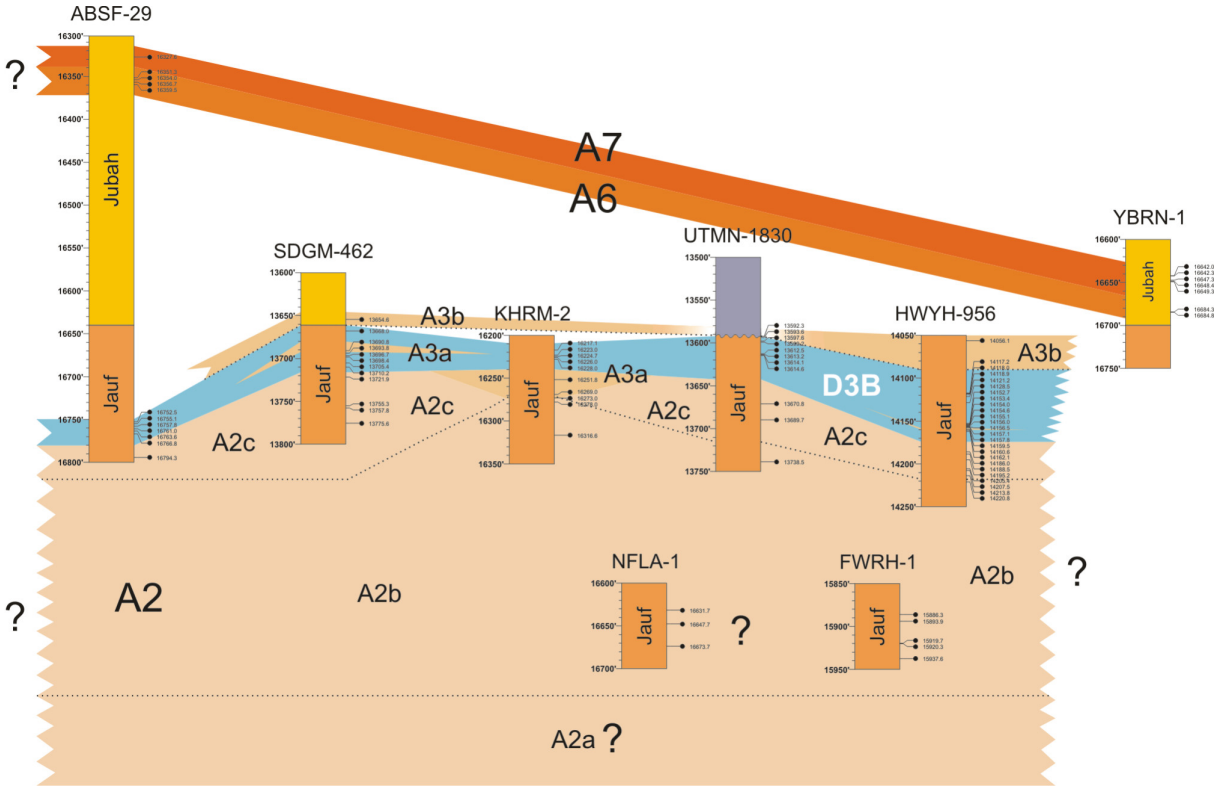

Fig. 4.5. Correlation in eastern Saudi Arabia on the basis of the new biozonation.

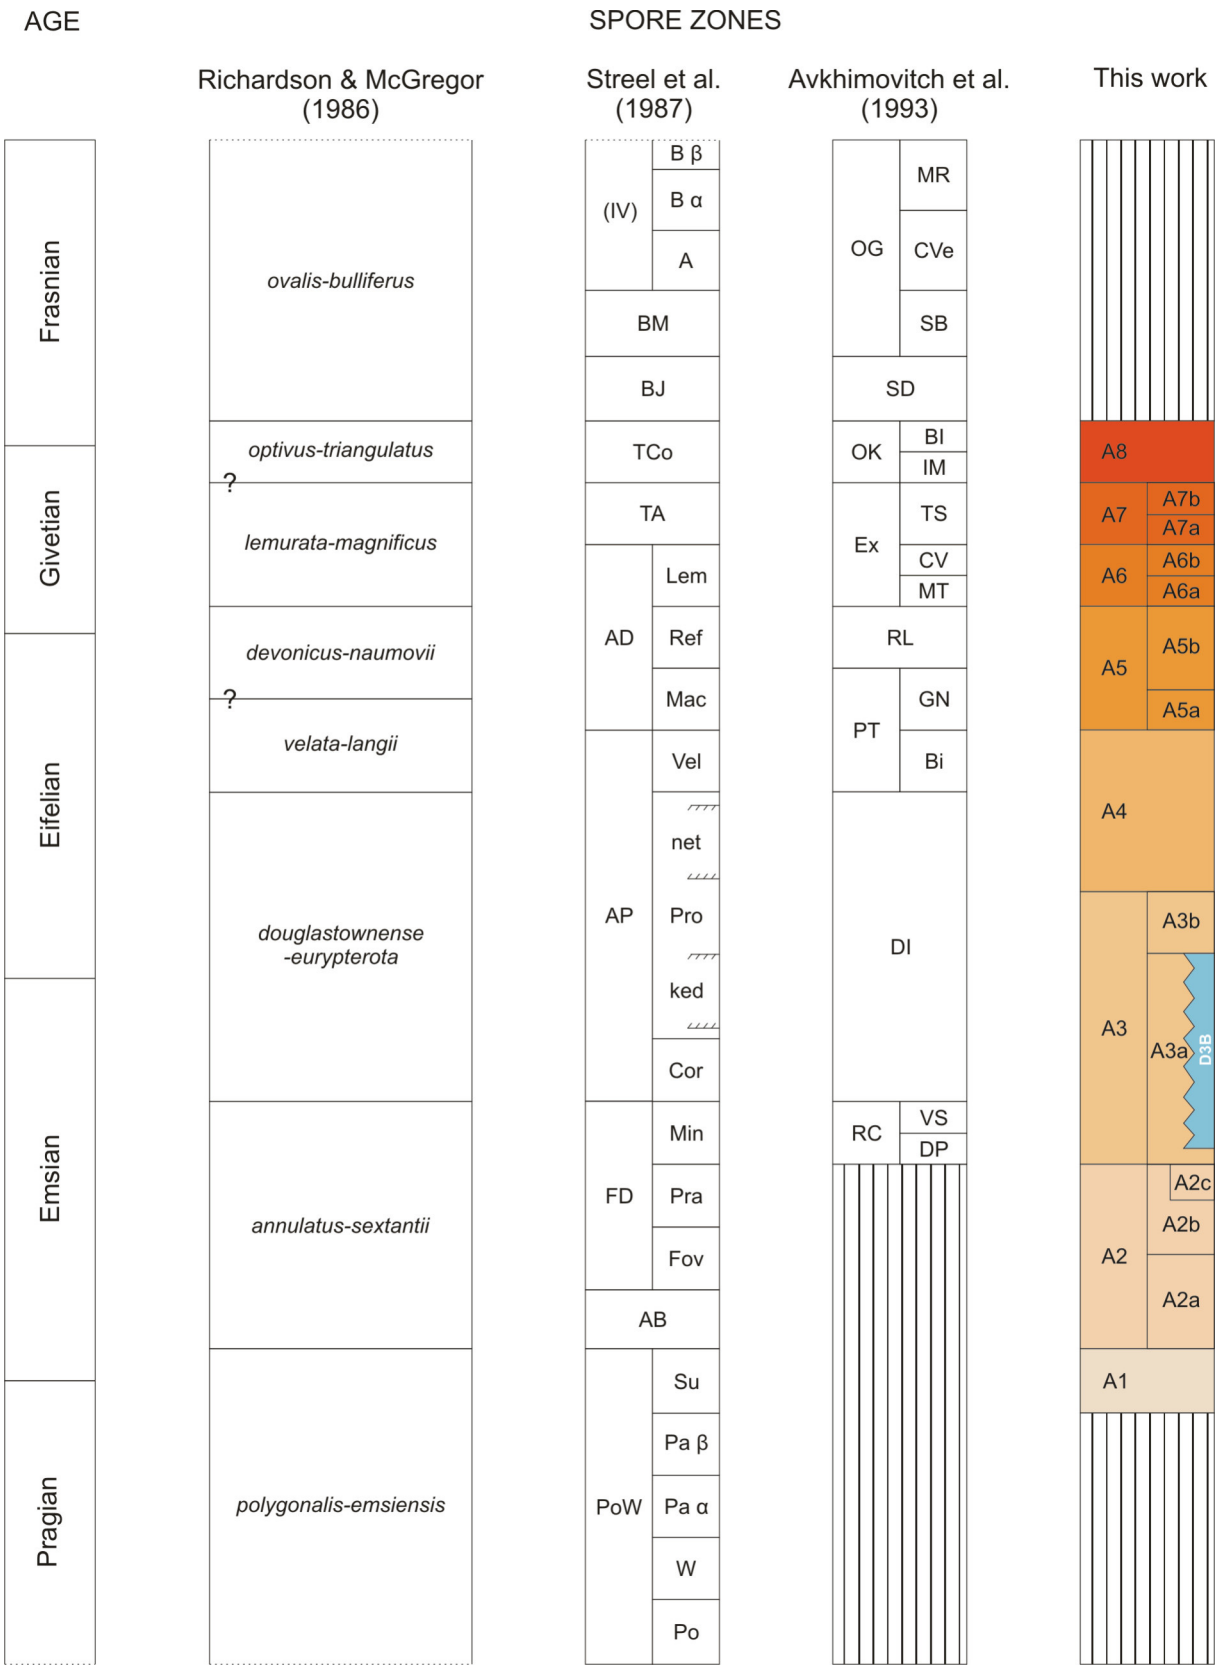

Fig. 4.6. Comparisons of the new biozonation from northwestern Gondwana with the miospore zonations from Euramerica (Richardson & McGregor, 1986; Streel et al., 1987; Avkhimovitch et al., 1993).

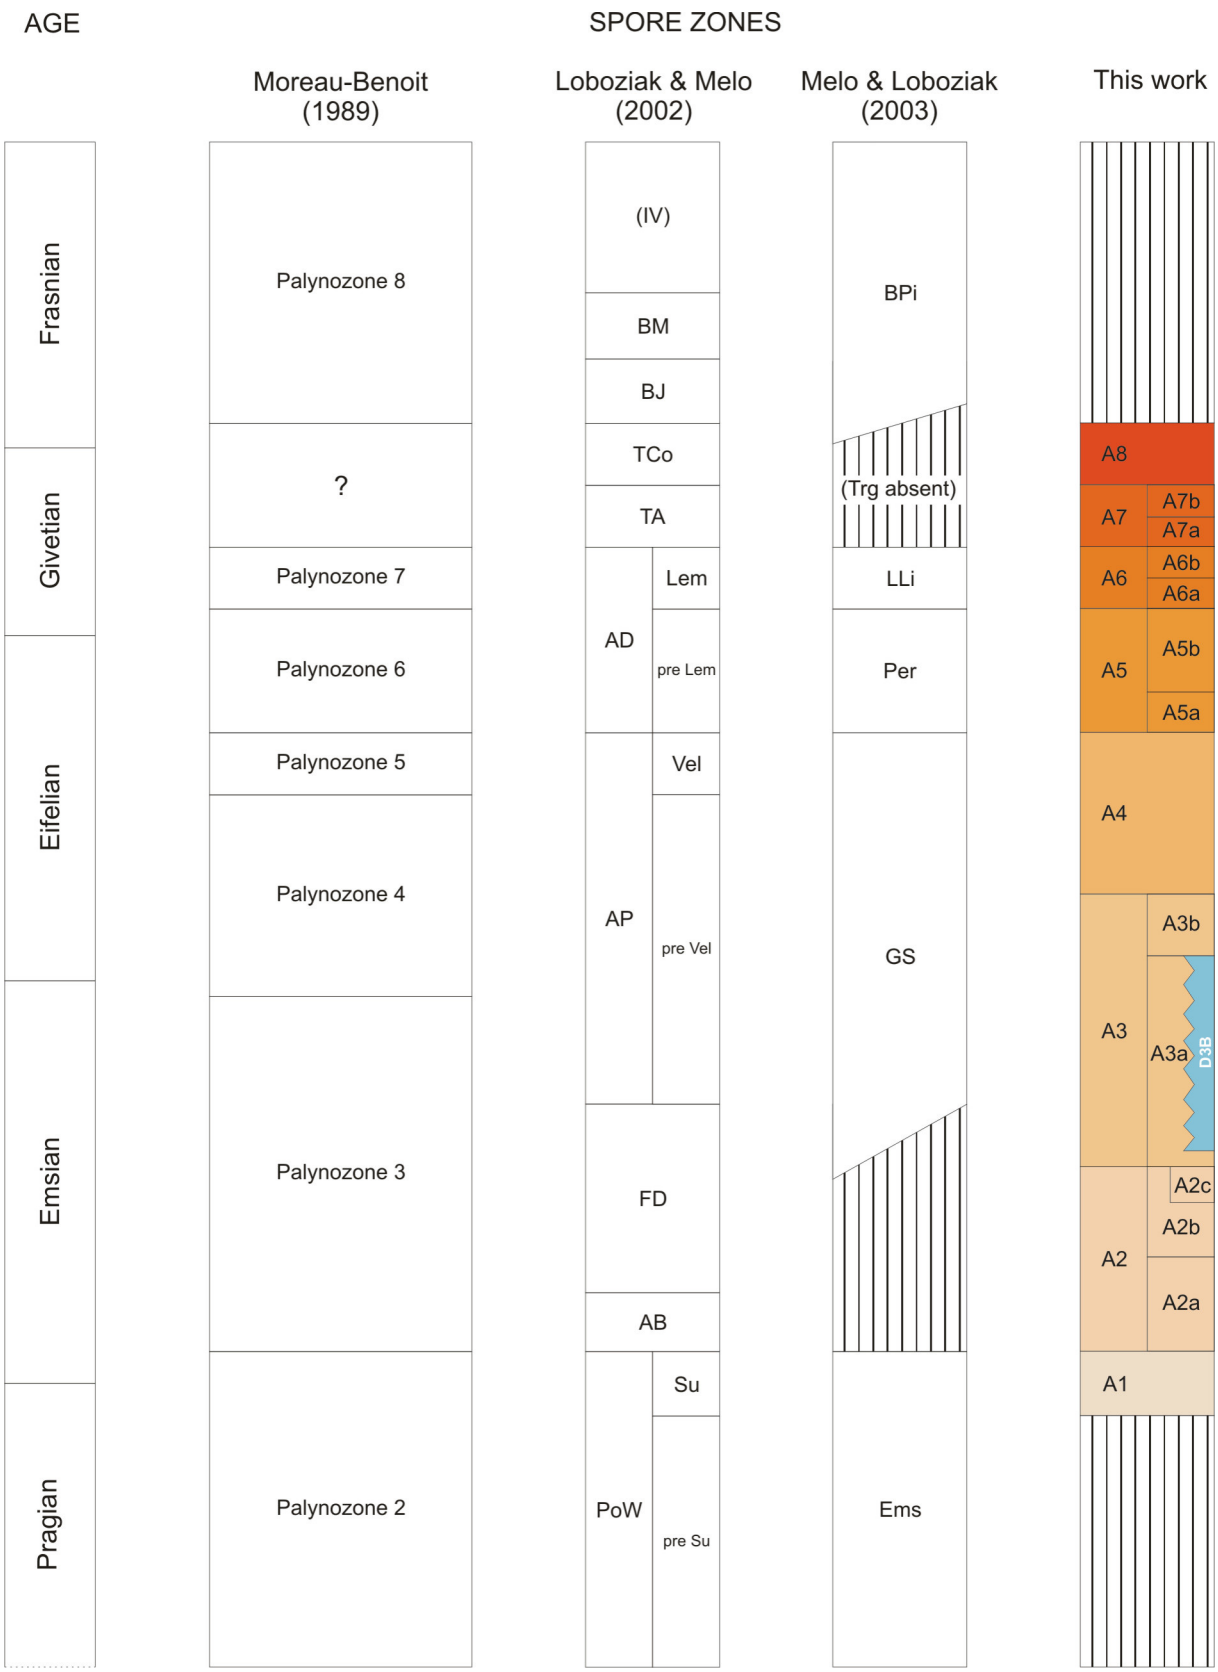

Fig. 4.7. Comparisons of the new biozonation from northwestern Gondwana with the most complete miospore zonations from western Gondwana (Moreau-Benoit, 1989; Loboziak & Melo, 2002; Melo & Loboziak, 2003).

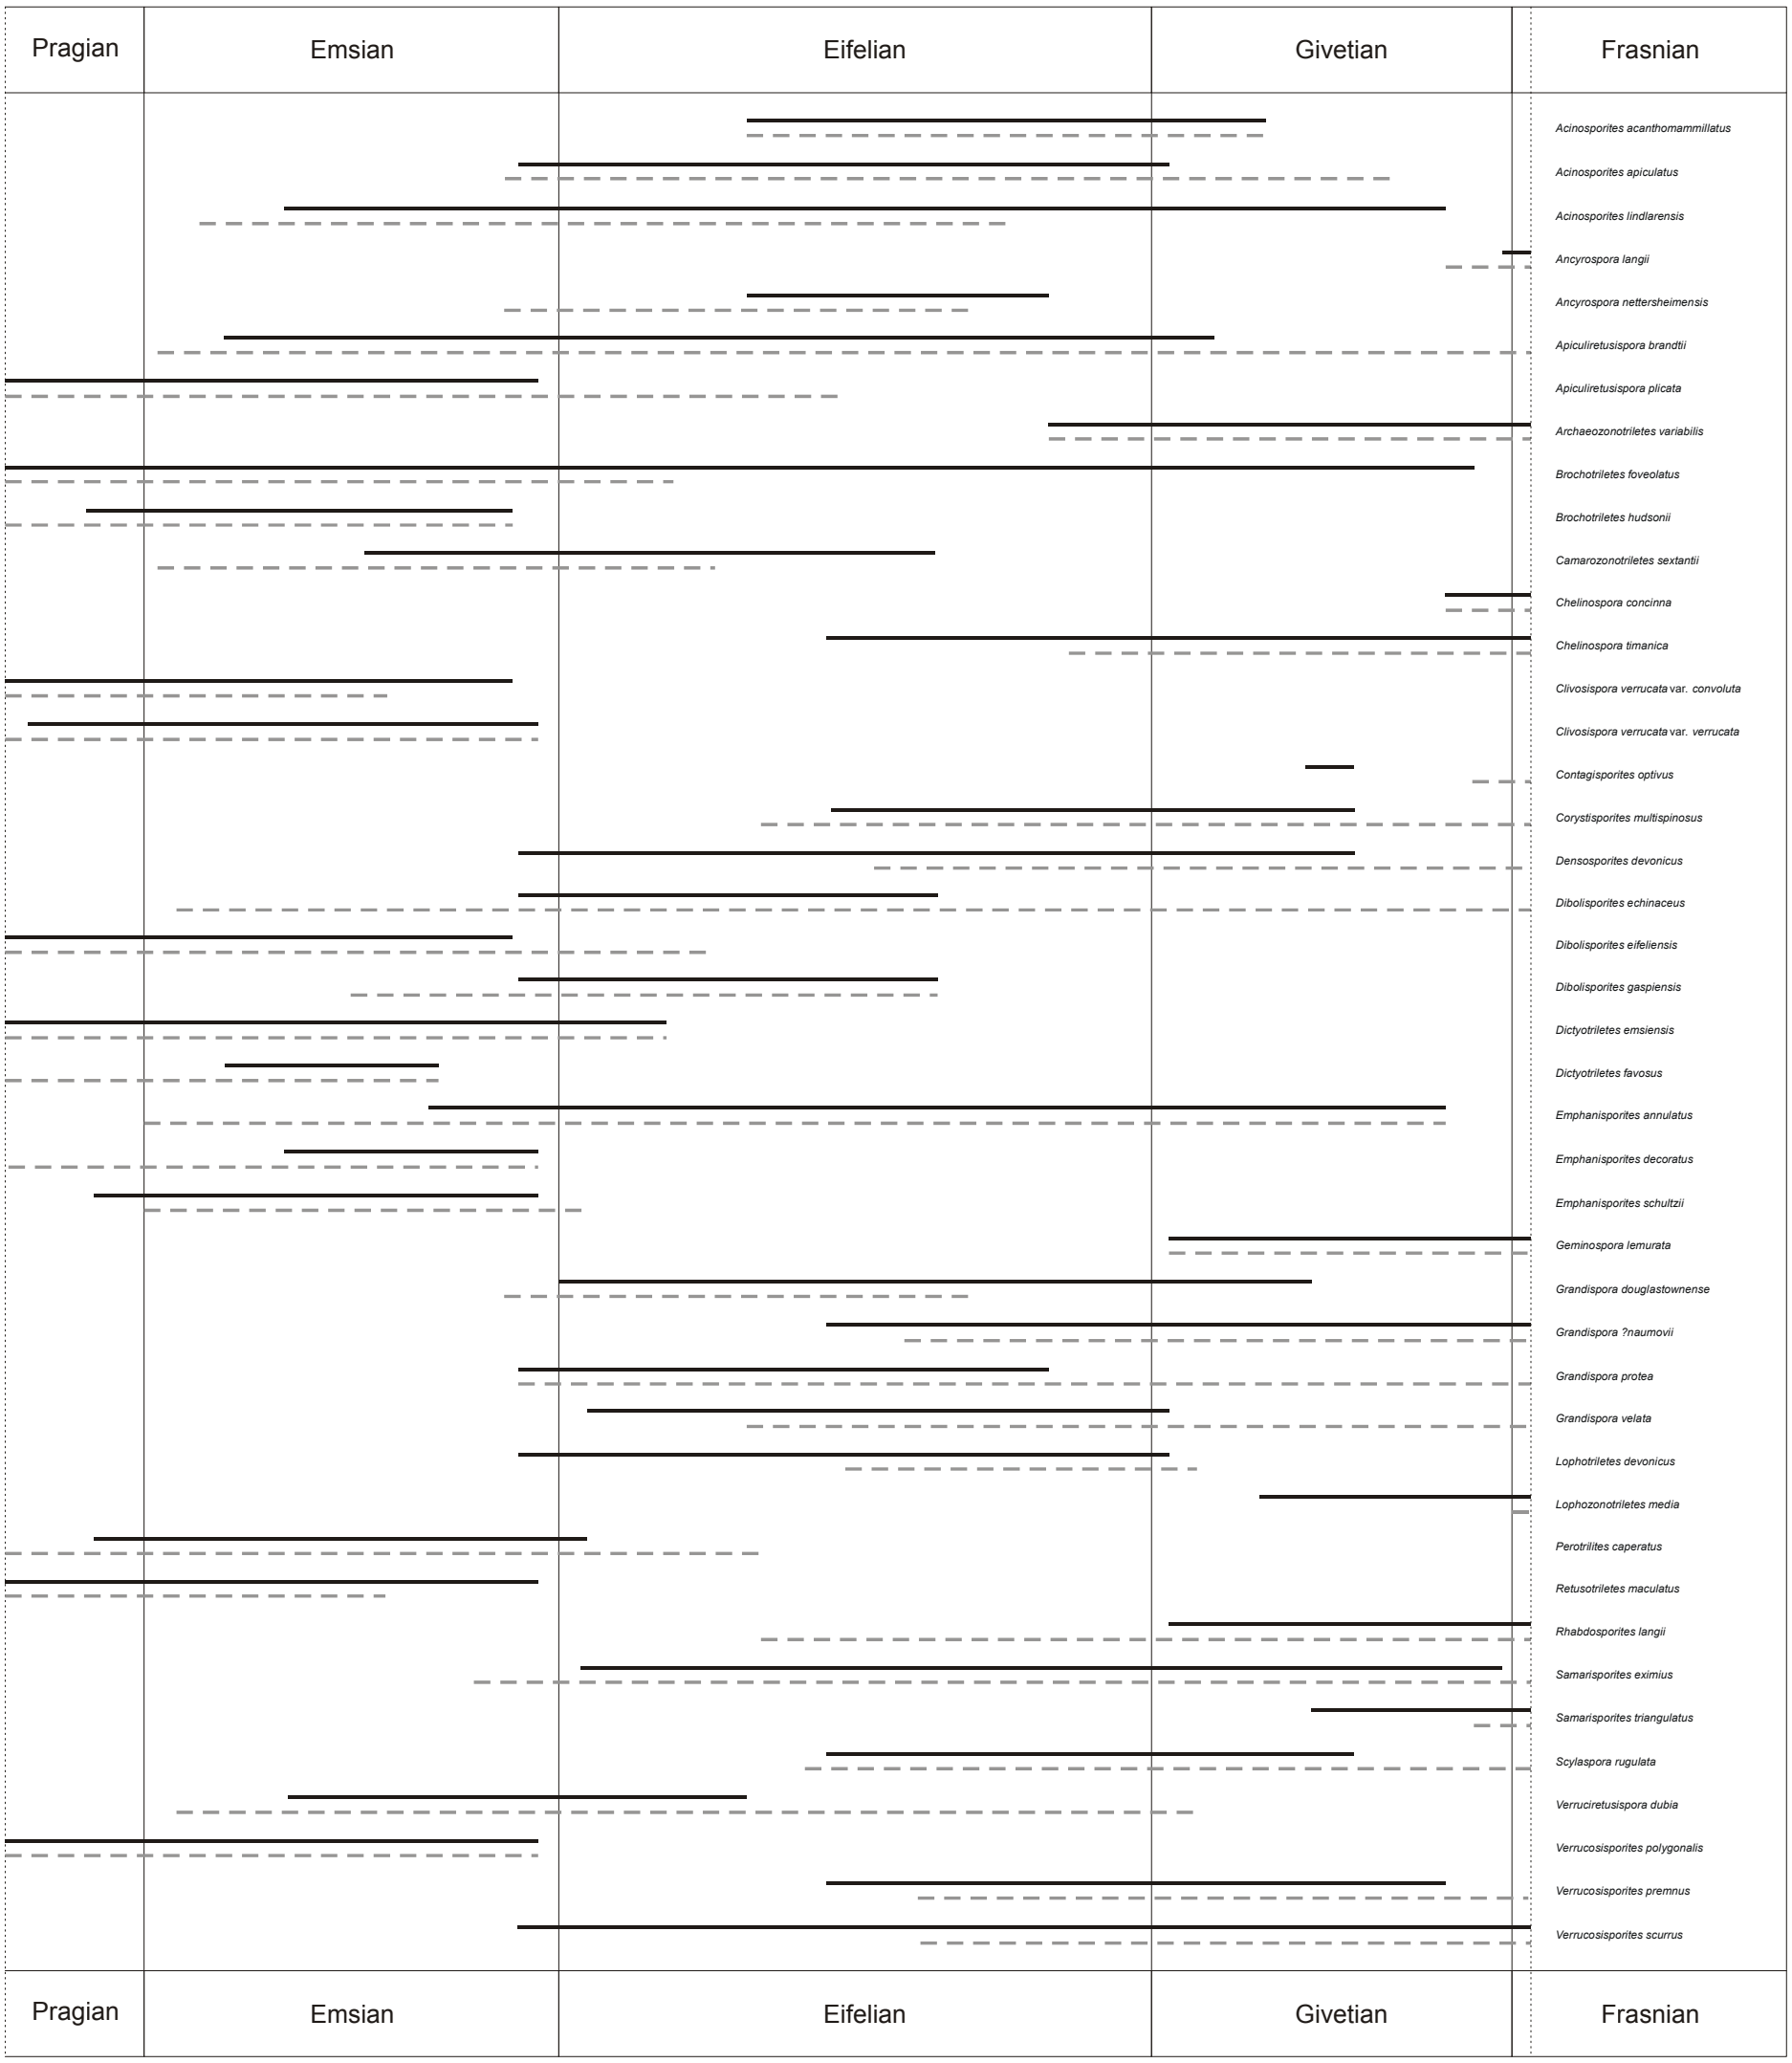

Fig. 4.8. Comparisons of ranges of some common species in northwestern Gondwana (continuous lines) and Euramerica (dotted lines). Stratigraphic ranges of species in Euramerica come from Richardson & McGregor (1986).

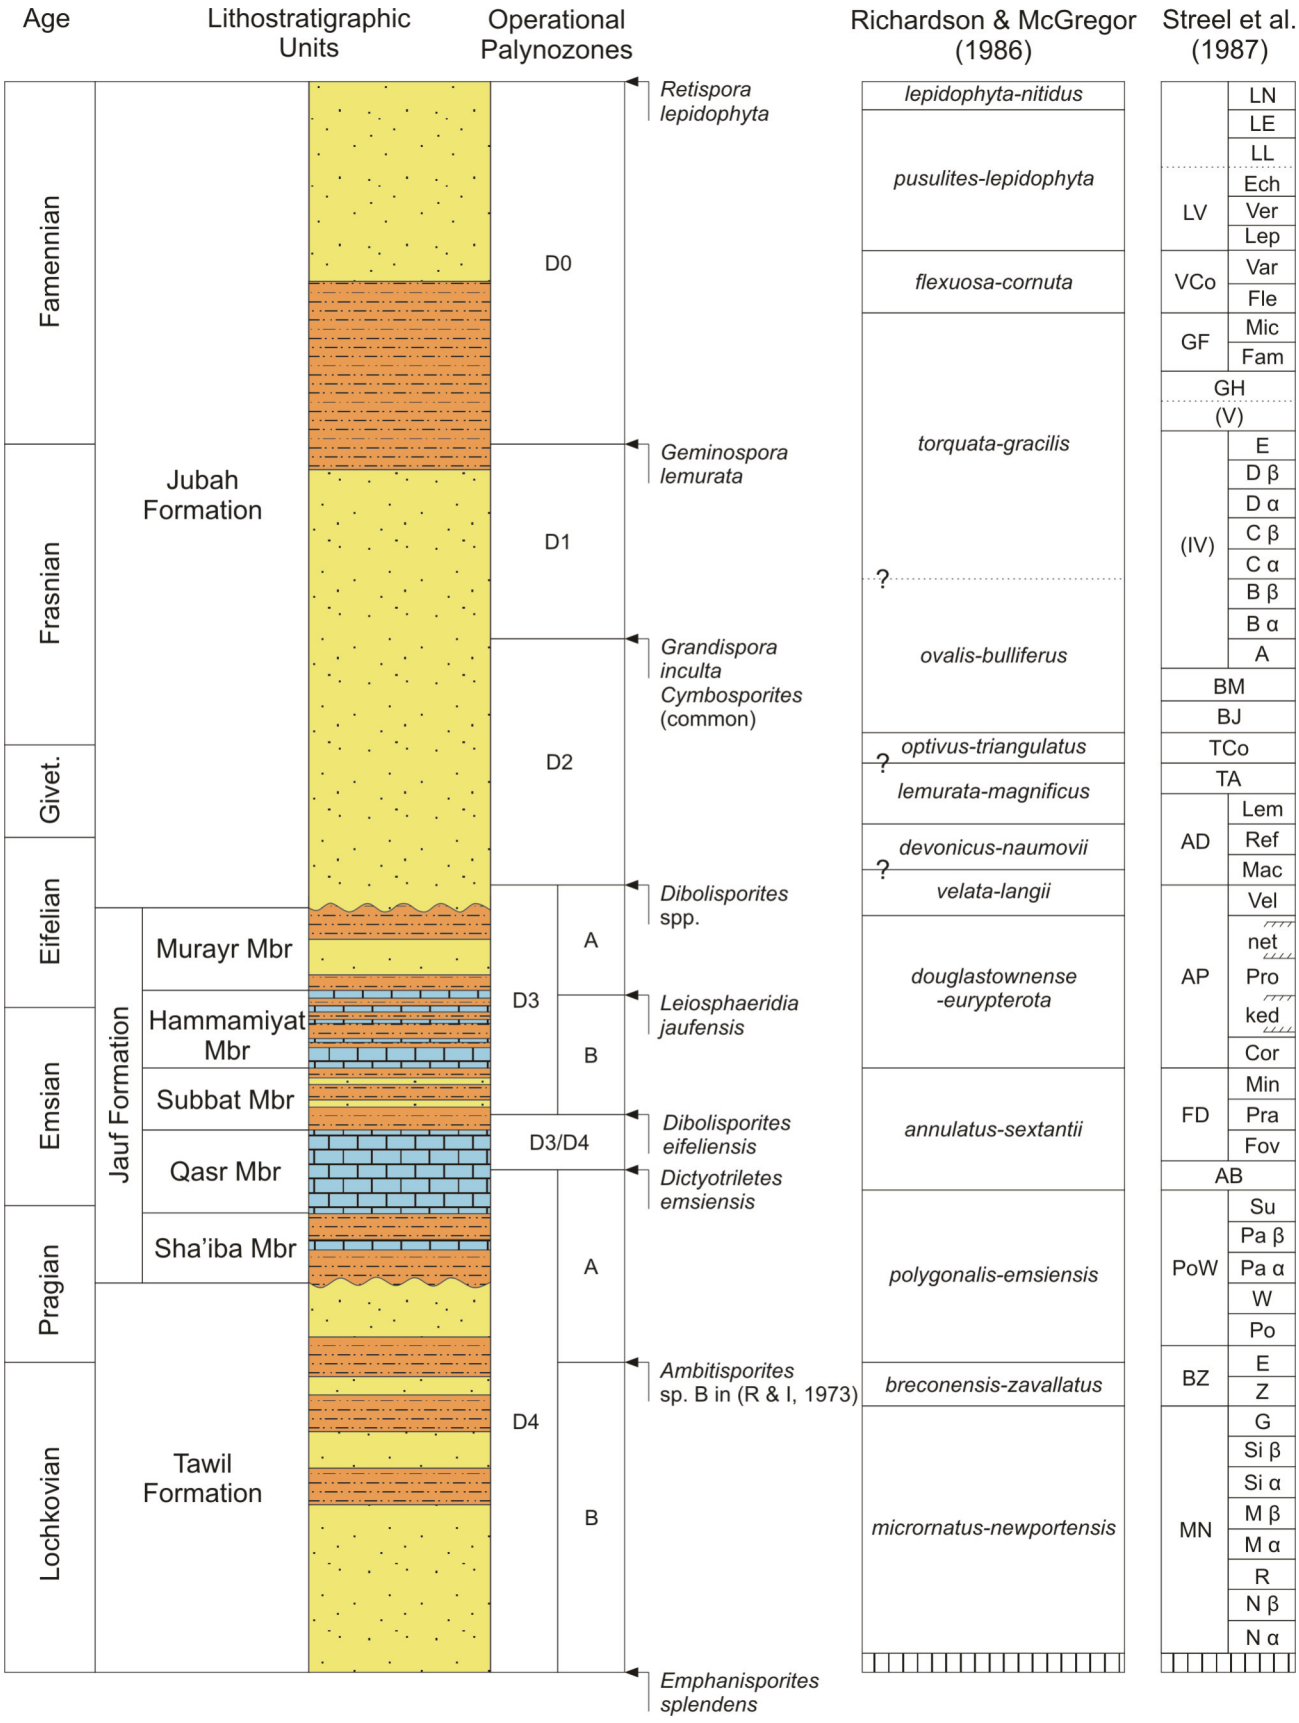

Fig. 5.1. Operational palynological zonation in Saudi Arabia compared with the standard Euramerican zonation of Richardson & McGregor (1986) and Streel et al. (1987) (modified after Al-Hajri et al., 1999).

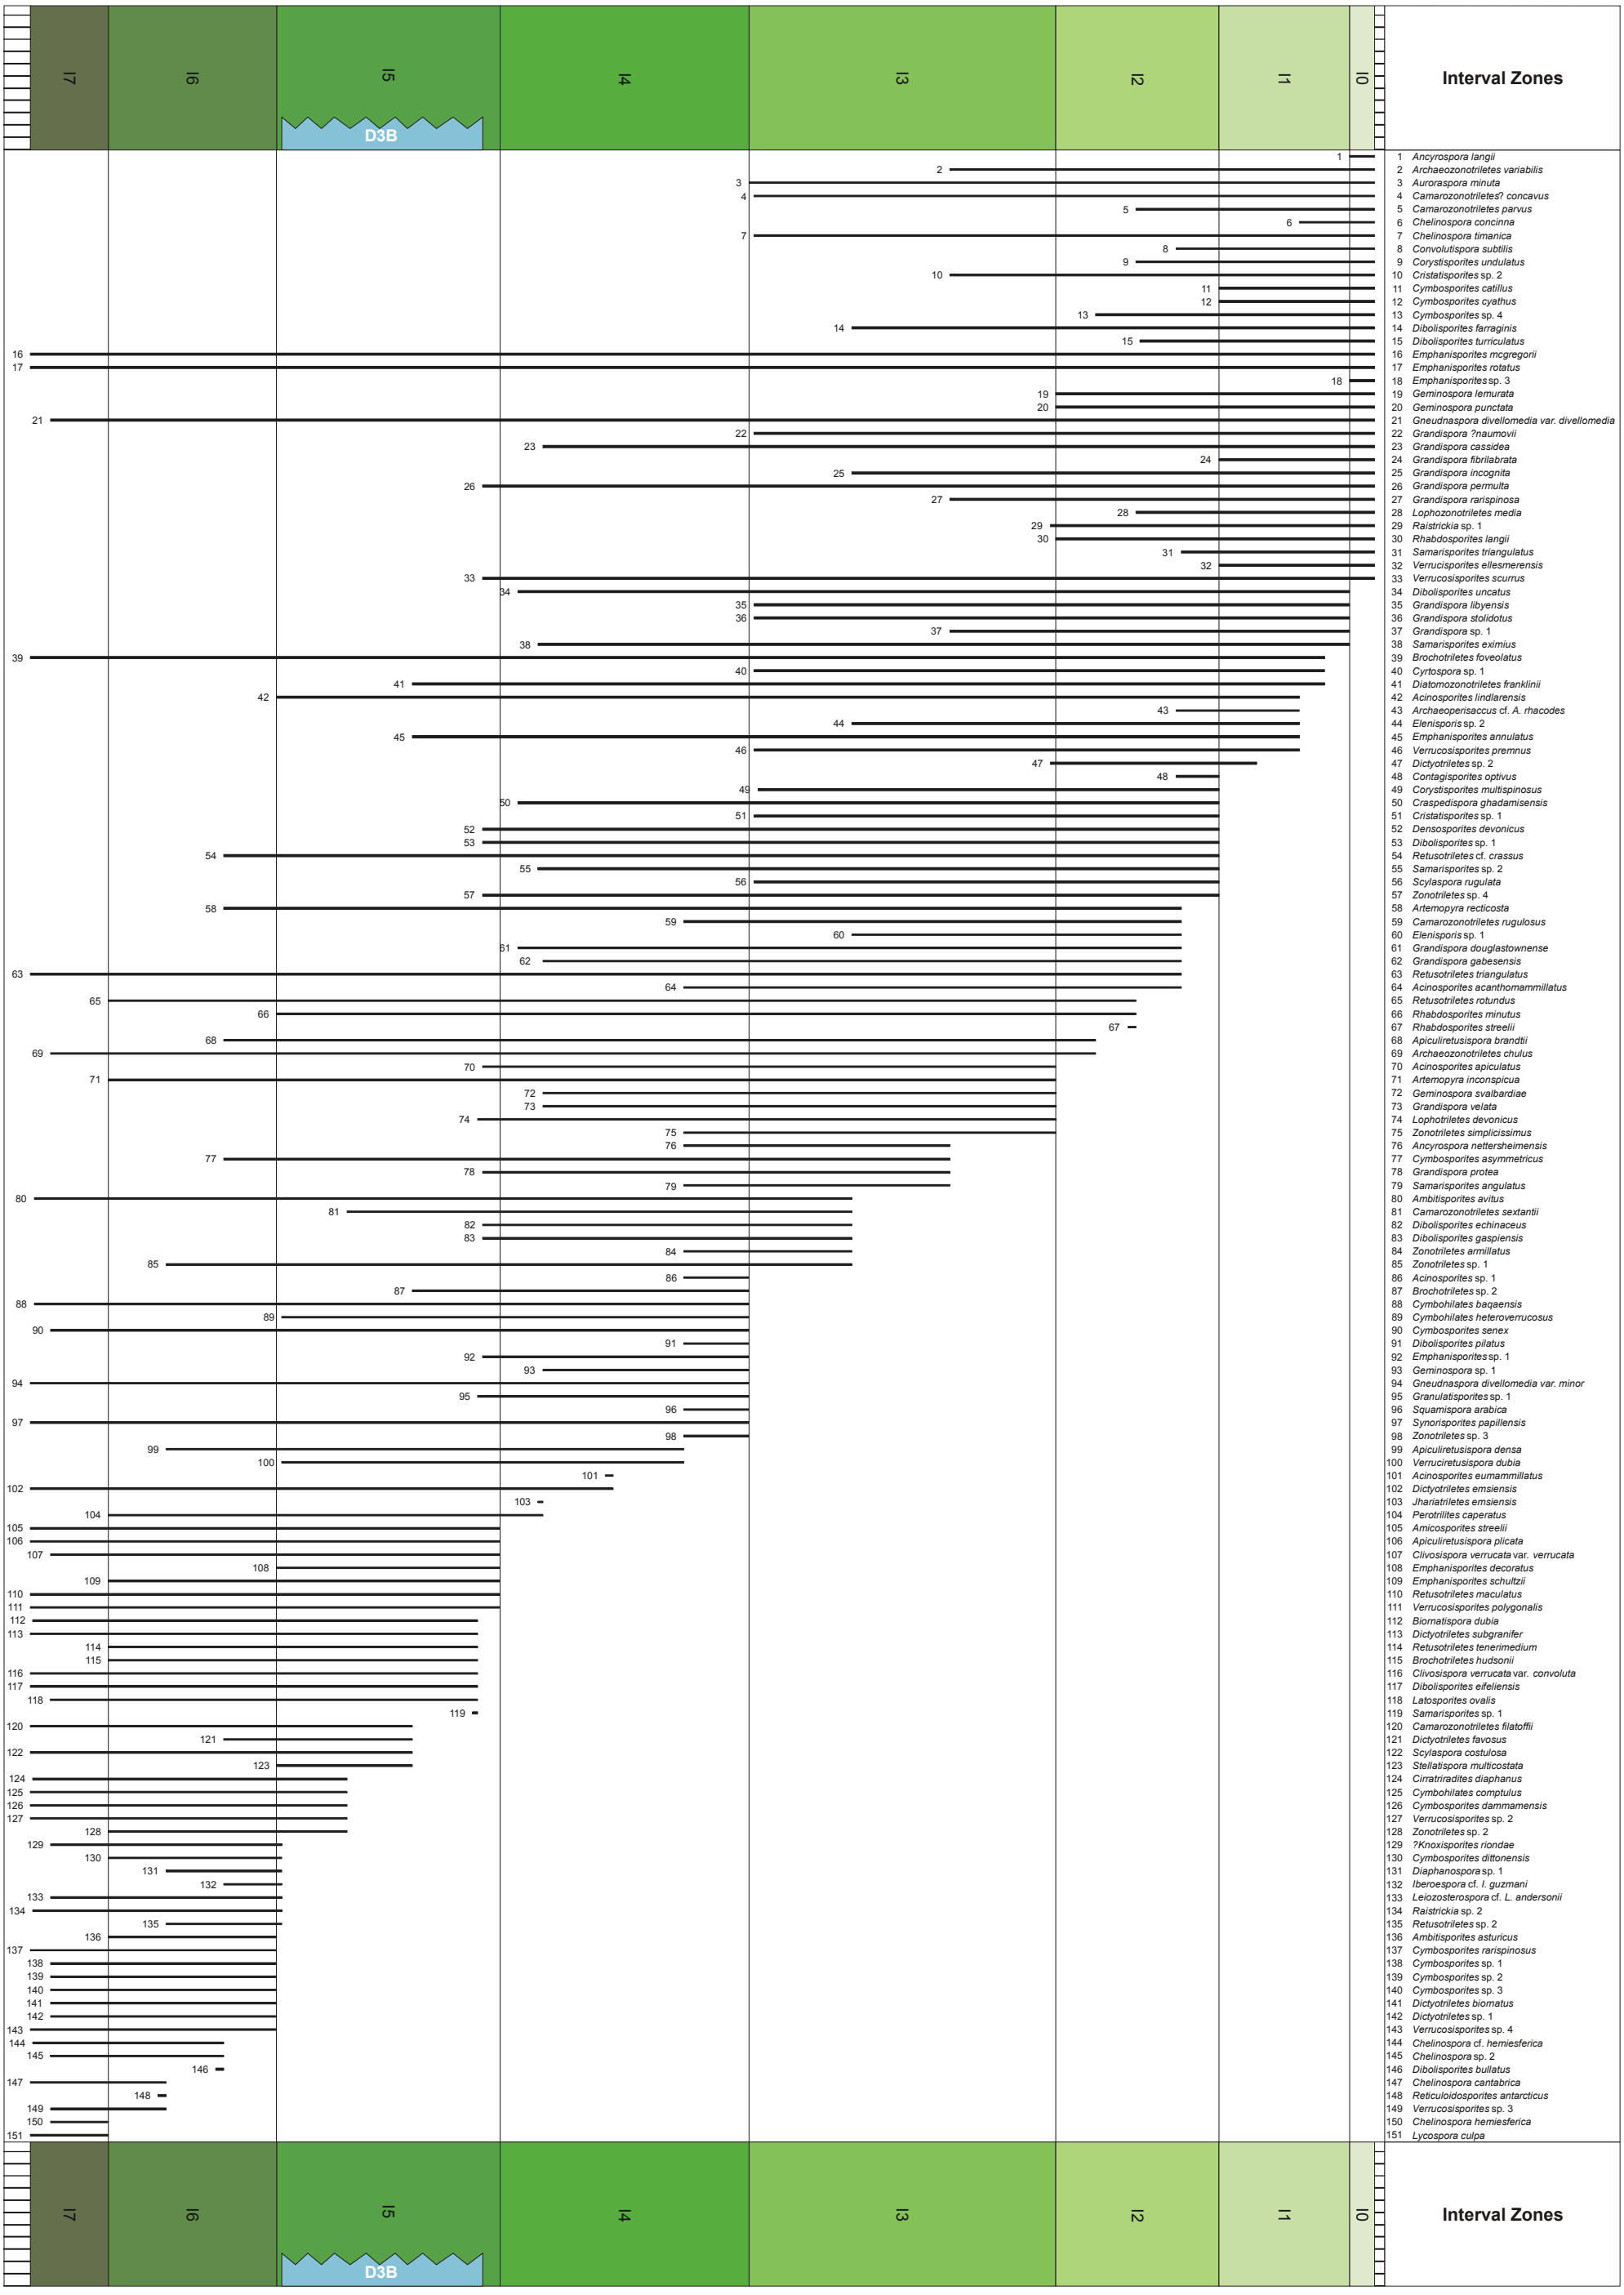

Fig. 5.2. Composite stratigraphic chart of the main miospore taxa for the new provisional downward biozonation. Stratigraphic ranges sorted according to their first-downhole occurrence.

Cymbosporites dammamensis
Cymbosporites dittonensis
Cymbosporites senex
Diaphanospora sp. 1
Dibolisporites eifeliensis
Dibolisporites spp.
Dictyotriletes emsiensis
Emphanisporites rotatus
Gneudnaspora divellomedia var. *divellomedia*
Latosporites ovalis
Retusotriletes maculatus
Retusotriletes tenerimedium
Retusotriletes triangulatus
Retusotriletes sp. 2
Retusotriletes spp.
Scylaspora costulosa
Synorisporites papillensis
Tetrahedraletes medinensis
Verrucosisporites polygonalis

Appendix 2.9. List of species encountered in well HWYH-956.

Acinosporites apiculatus
Acinosporites lindlarensis
Ambitisporites asturicus
Ambitisporites avitus
Amicosporites streelii
Aneurospora spp.
Apiculiretusispora brandtii
Apiculiretusispora plicata
Apiculiretusispora spp.
Archaeozonotriletes chulus
Artemopyra recticosta
Biornatispora dubia
Biornatispora spp.
Brochotriletes foveolatus
Brochotriletes robustus
Camarozonotriletes filatoffii
Chelinospora cf. *hemiespherica*
Cirratriradites diaphanus
Clivosispora verrucata var. *verrucata*
Cymbohilates baqaensis
Cymbohilates comptulus
Cymbosporites asymmetricus
Cymbosporites dammamensis
Cymbosporites senex
Dibolisporites eifeliensis
Dibolisporites gaspiensis
Dibolisporites spp.
Dictyotriletes emsiensis
Dyadospora murusattenuata
Emphanisporites rotatus
Emphanisporites schultzii
Gneudnaspora divellomedia var. *divellomedia*
Gneudnaspora divellomedia var. *minor*
?*Knoxisporites riondae*
Latosporites ovalis
Retusotriletes goensis
Retusotriletes maculatus
Retusotriletes rotundus
Retusotriletes tenerimedium
Retusotriletes triangulatus
Retusotriletes sp. 2
Retusotriletes spp.
Scylaspora costulosa
Synorisporites papillensis
Tetrahedraletes medinensis
Verrucosisporites polygonalis
Verrucosisporites spp.
Zonotriletes spp.

Appendix 2.10. List of species encountered in well KHRM-2.

Acinosporites lindlarensis
Ambitisporites avitus
Amicosporites streelii
Aneurospora spp.
Apiculiretusispora brandtii
Apiculiretusispora densa
Apiculiretusispora spp.
Archaeozonotriletes chulus
Artemopyra recticosta
Biornatispora dubia
Brochotriletes bellatulus
Brochotriletes foveolatus
Camarozonotriletes filatoffii
Camarozonotriletes sextantii
Chelinospora spp.
Cirratriradites diaphanus
Clivosispora verrucata var. *verrucata*
Cymbohilates baqaensis
Cymbohilates comptulus
Cymbosporites dammamensis
Cymbosporites rarispinosus
Cymbosporites senex
Cymbosporites sp. 1
Diaphanospora sp. 1
Dibolisporites eifeliensis
Dibolisporites spp.
Dictyotriletes emsiensis
Dictyotriletes ?gorgoneus
Dictyotriletes favosus
Dictyotriletes spp.
Dyadospora murusattenuata
Emphanisporites decoratus
Emphanisporites mcgregorii
Emphanisporites rotatus
Emphanisporites schultzii
Gneudnaspora divellomedia var. *divellomedia*
Gneudnaspora divellomedia var. *minor*
Iberoespora cf. *I. guzmani*
Latosporites ovalis
Raistrickia sp. 2
Retusotriletes cf. *R. crassus*
Retusotriletes maculatus
Retusotriletes rotundus
Retusotriletes triangulatus
Retusotriletes spp.
Rhabdosporites minutus
Scylaspora costulosa
Stellatispora multicostata
Synorisporites papillensis
Tetrahedraletes medinensis
Verrucosisporites polygonalis
Verrucosisporites sp. 1
Verrucosisporites sp. 2
Zonotriletes spp.

Appendix 2.11. List of species encountered in well NFLA-1.

Apiculiretusispora spp.
Biornatispora dubia (McGregor) Steemans, 1989
Cirratriradites diaphanus Steemans, 1989
Clivosispora verrucata var. *verrucata* McGregor, 1973
Cymbosporites asymmetricus Breuer et al., 2007
Cymbosporites senex McGregor & Camfield, 1976
Dibolisporites eifeliensis (Lanninger) McGregor, 1973
Dibolisporites spp.
Emphanisporites rotatus Mcgregor emend. McGregor, 1973
Gneudnaspora divellomedia var. *divellomedia* (Tchibrikova) Balme, 1988
Gneudnaspora divellomedia (Tchibrikova) Balme, 1988 var. *minor* Breuer et al., 2007
Latosporites ovalis Breuer et al., 2007
Leiozosterospora cf. *L. andersonii* Wellman, 2006
Retusotriletes tenerimedium Tchibrikova, 1959
Retusotriletes triangulatus (Streel) Streel, 1967
Retusotriletes spp.

Appendix 2.12. List of species encountered in well SDGM-462.

Acinosporites apiculatus
Acinosporites lindlarensis
Aneurospora spp.
Apiculiretusispora brandtii
Apiculiretusispora spp.
Archaeozonotriletes chulus
Biornatispora dubia
Brochotriletes foveolatus
Camarozonotriletes sextantii
Chelinospora spp.
Cirratriradites diaphanus
Clivosispora verrucata var. *verrucata*
Cymbohilates baqaensis
Cymbohilates comptulus
Cymbosporites asymmetricus
Cymbosporites senex
Dibolisporites eifeliensis
Dibolisporites spp.
Dictyotriletes spp.
Emphanisporites rotatus
Gneudnaspora divellomedia var. *divellomedia*
Gneudnaspora divellomedia var. *minor*
?*Knoxisporites riondae*
Latosporites ovalis
Retusotriletes tenerimedium
Retusotriletes triangulatus
Retusotriletes spp.
Scylaspora costulosa
Verrucosisporites polygonalis

Appendix 2.13. List of species encountered in well UTMN-1830.

Acinosporites lindlarensis
Ambitisporites avitus
Amicosporites streelii
Aneurospora cf. *A. bollandensis*
Aneurospora spp.
Apiculiretusispora brandtii
Apiculiretusispora spp.
Archaeozonotriletes chulus
Artemopyra recticosta
Biornatispora dubia
Brochotriletes foveolatus
Camarozonotriletes filatoffii
Camarozonotriletes sextantii
Chelinospora cantabrica
Chelinospora spp.
Cirratriradites diaphanus
Clivosispora verrucata
Clivosispora verrucata var. *verrucata*
Concentricosisporites sagittarius
Cymbohilates baqaensis
Cymbohilates comptulus
Cymbohilates heteroverrucosus
Cymbosporites asymmetricus
Cymbosporites dammamensis
Cymbosporites dittonensis
Cymbosporites senex
Diaphanospora sp. 1
Dibolisporites bullatus
Dibolisporites eifeliensis
Dibolisporites spp.
Dictyotriletes biornatus
Dictyotriletes emsiensis
Dictyotriletes favosus
Dictyotriletes spp.
Emphanisporites rotatus
Emphanisporites schultzii
Gneudnaspora divellomedia var. *divellomedia*
Gneudnaspora divellomedia var. *minor*
Iberoespora cf. *I. guzmani*
Latosporites ovalis
Retusotriletes cf. *R. crassus*
Retusotriletes maculatus
Retusotriletes rotundus
Retusotriletes tenerimedium
Retusotriletes triangulatus
Retusotriletes sp. 2
Retusotriletes spp.
Scylaspora costulosa
Stellatispora multicostata
Synorisporites papillensis
Tetrahedraletes medinensis
Verruciretusispora dubia
Verrucosisporites polygonalis
Verrucosisporites spp.
Zonotriletes sp. 1

Appendix 2.14. List of species encountered in well YBRN-1.

Acinosporites lindlarensis
Apiculiretusispora spp.
Archaeozonotriletes variabilis
Artemopyra recticosta
Auroraspora minuta
Brochotriletes bellatulus
Brochotriletes robustus
Camarozonotriletes parvus
Camarozonotriletes? *concavus*
Corystisporites undulatus
Cristatisporites sp. 1
Cymbosporites catillus
Cymbosporites cyathus
Dibolisporites uncatus
Dibolisporites spp.
Dictyotriletes sp. 2
Emphanisporites annulatus
Emphanisporites mcgregorii
Emphanisporites rotatus
Emphanisporites schultzii
Geminospora lemurata
Geminospora punctata
Gneudnaspora divellomedia var. *divellomedia*
Grandispora incognita
Grandispora permulta
Grandispora spp.
Retusotriletes cf. *R. crassus* Clayton
Retusotriletes goensis
Retusotriletes rotundus
Retusotriletes triangulatus
Retusotriletes spp.
Rhabdosporites langii
Samarisporites triangulatus
Scylaspora rugulata
Verrucisporites ellesmerensis
Verrucosisporites scurrus

Appendix 3.1. List of species encountered in borehole A1-69.

Acinosporites acanthomammillatus
Acinosporites apiculatus
Acinosporites lindlarensis
Acinosporites spp.
Ambitisporites avitus
Amicosporites jonkeri
Ancyrospora langii
Ancyrospora nettersheimensis
Apiculiretusispora brandtii
Apiculiretusispora spp.
Archaeozonotriletes chulus
Archaeozonotriletes variabilis
Artemopyra inconspicua
Artemopyra recticosta
Auroraspora minuta
Biornatispora dubia
Brochotriletes foveolatus
Brochotriletes hudsonii
Brochotriletes sp. 1
Brochotriletes sp. 2
Camarozonotriletes parvus
Camarozonotriletes rugulosus
Camarozonotriletes sextantii
Camarozonotriletes sp. 1
Camarozonotriletes? *concavus*
Chelinospora concinna
Chelinospora sp. 3
Chelinospora spp.
Chelinospora timanica
Clivosispora verrucata var. *convoluta*
Contagisporites optivus
Corystisporites collaris
Corystisporites multispinosus
Corystisporites undulatus
Craspedispora ghadamisensis
