Ringraziamenti	iii
1 Introduction and overview of the thesis	1
1.1 Introduction	3
1.1.1 The goals of asteroseismology	5
1.2 Strategies for asteroseismic inferences	6
1.2.1 Inferences from excitation	6
1.2.2 Inferences on stellar cores through gravity modes	8
1.2.3 Inferences from solar-like oscillations in visual binaries	9
I Scientific framework	13
2 Stellar models: input physics and uncertainties	15
2.1 Introduction	17
2.2 Basic equations of stellar structure and evolution	17
2.3 Microphysics	19
2.3.1 Nuclear reactions	19
2.3.2 Equation of state	24
2.3.3 Opacity	26
2.3.4 Metal mixture	28
2.4 Macrophysics	34
3 Stellar oscillations: a general introduction	37
3.1 Introduction	39
3.2 Hydrodynamics equations	39
3.2.1 Basic equations	39
3.2.2 Perturbation analysis	40
3.2.3 Pressure waves	41
3.2.4 Surface gravity waves	41
3.2.5 Internal gravity waves	42
3.3 Equations of stellar linear oscillations	43
3.3.1 Equations of stellar linear adiabatic oscillations	43
3.3.2 Separation of variables	44
3.3.3 Boundary conditions	46

3.4	Functional analysis	47
3.4.1	Effects of a small change in the oscillation equations . . .	47
3.5	Properties of oscillation modes	47
3.5.1	Physical nature of the modes	48
3.5.1.1	p modes	49
3.5.1.2	g modes	50
3.5.1.3	Mixed modes	51
3.6	Asymptotic approximation of stellar oscillations	52
3.6.1	The JWKB approximation	54
3.6.2	Asymptotic expression of p-mode frequencies	54
3.6.3	Asymptotic expression of g-mode periods	55
3.7	Excitation and damping of stellar oscillations	56
3.7.1	Stochastically excited pulsators	57
3.7.2	Self-excited pulsators: the case of β Cephei and SPB stars	57
3.8	Pulsating stars on the main sequence	62
II Probing stellar interiors through asteroseismology		67
4	Revised instability domains of SPB and β Cephei stars	69
4.1	Introduction	71
4.2	Metal mixtures	72
4.2.1	Local accumulation of iron	72
4.2.2	Different global metal mixtures	73
4.3	Opacities: OPAL versus OP	76
4.4	Stellar models	78
4.5	Stability analysis	78
4.5.1	Effects of the metal mixture	78
4.5.2	Effects of OP vs. OPAL	81
4.5.3	Combined effects	84
4.6	Summary	87
5	Probing the properties of stellar cores through g modes	91
5.1	Introduction	93
5.2	The properties of trapped g modes	95
5.3	Approximated expression of g-modes periods	100
5.3.1	Variational principle	101
5.3.2	Considering the effects of the μ gradient on the eigenfunc-	
	tions	103
5.3.2.1	Further approximations	106
5.4	Application to stellar models	108
5.4.1	Convective core evolution: stellar mass dependence	109
5.4.1.1	Models with a radiative core	109
5.4.1.2	Models with a growing convective core on the	
	main-sequence.	110

5.4.1.3	Models with a receding convective core.	114
5.4.2	Effects of extra-mixing on high-order g modes	115
5.4.2.1	Overshooting	120
5.4.2.2	Effects of microscopic diffusion	124
5.4.2.3	Rotationally induced mixing	127
5.4.3	Modes of different degree and low radial order	129
5.5	Challenges for asteroseismology of SPB and γ Dor stars	136
5.6	The effect of turbulent mixing on mixed modes	139
5.6.1	Effects of turbulent mixing on the μ gradient near the core in $10 M_{\odot}$ models	139
5.6.2	Effects of turbulent mixing on low-order g modes and mixed modes	143
5.6.2.1	β Cephei stars	146
5.6.2.2	δ Scuti stars	152
5.6.2.3	Avoided crossings in solar-like oscillations	153
5.7	Summary	157
6	α Centauri AB	161
6.1	Introduction	163
6.2	Calibration method	167
6.2.1	Optimization algorithm	169
6.3	The choice of the observational constraints	170
6.3.1	Non-asteroseismic constraints	170
6.3.2	Seismic constraints	171
6.4	Stellar models	175
6.5	Results	175
6.5.1	Effect of classic and seismic observable quantities	181
6.5.2	Effect of the treatment of convection	184
6.5.2.1	MLT versus FST	185
6.5.2.2	One or two different values for the mixing length parameter?	186
6.5.3	Disentangling the physics	189
6.5.3.1	Equation of state	192
6.5.3.2	Microscopic diffusion	192
6.5.3.3	Solar mixture	193
6.5.3.4	Overshooting	194
6.6	Comparison with the latest observational data	197
6.6.1	α Cen A	197
6.6.2	α Cen B	200
6.7	Summary	203
7	12 Boötis	207
7.1	Introduction	209
7.2	12 Boötis: observational constraints	211
7.3	Modelling 12 Boötis	213

7.3.1	Overshooting	215
7.3.2	Effects of diffusion	218
7.3.3	Other sources of extra-mixing in the core	219
7.4	Asteroseismic properties	221
7.4.1	Probing the evolutionary status	222
7.4.1.1	Seismology of component B	227
7.4.2	Probing the chemical composition gradient in the core	229
7.5	Summary	234
8	Conclusions and future prospects	237
III	Addenda	245
A	Bibliography	247
B	List of publications	275
C	Effects of revised input physics on stellar models	281
C.1	Solar calibrations	281
C.2	Nuclear reaction rates & metal mixture	299
