# Information compression through between-item similarity: evidence from the visual domain

Benjamin Kowialiewski<sup>1</sup>, Benoît Lemaire<sup>2</sup>, Sophie Portrat<sup>2</sup>

<sup>1</sup>University of Zürich, Switzerland, <sup>2</sup>Université Grenoble Alpes

**University of  
Zurich**<sup>UZH</sup>

**UGA**  
Université  
Grenoble Alpes

Between-item similarity enhances WM performance

**Semantic relatedness.** Semantically related vs. unrelated words

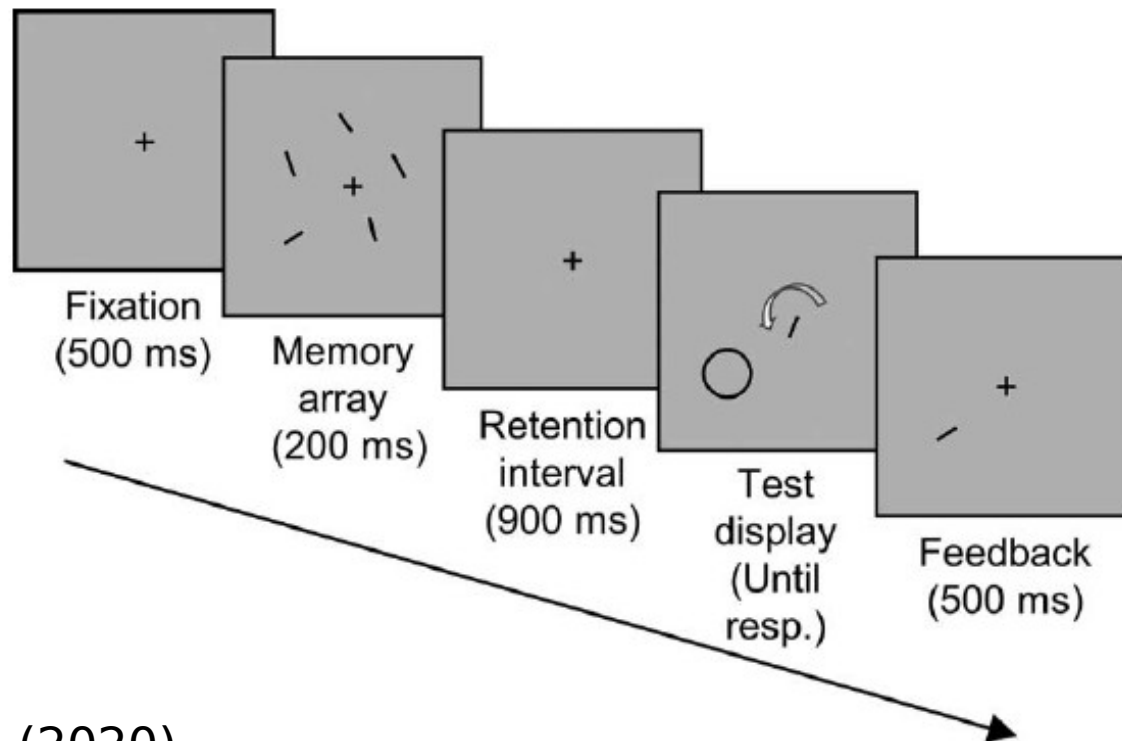

Between-item similarity enhances WM performance

Phonological similarity. Rhyming vs. non-rhyming words

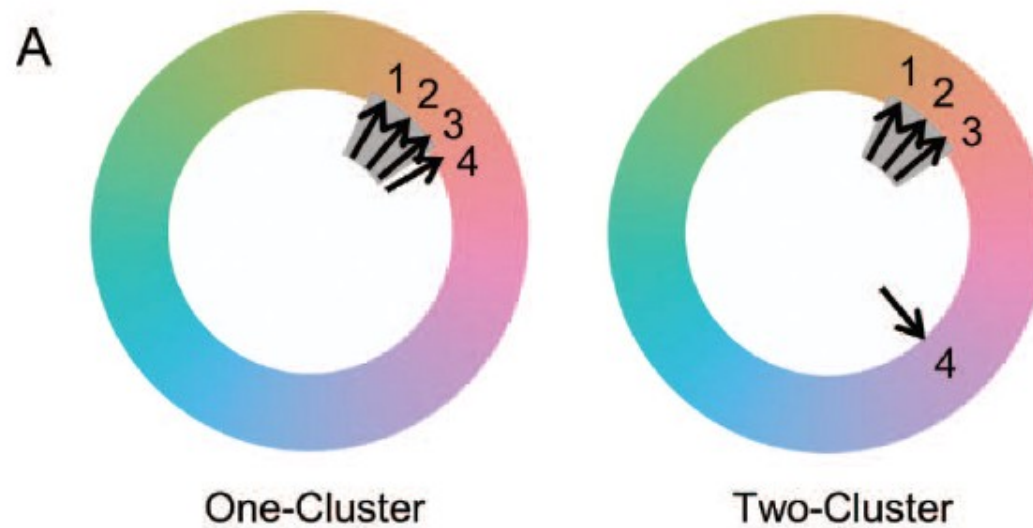

## Between-item similarity enhances WM performance

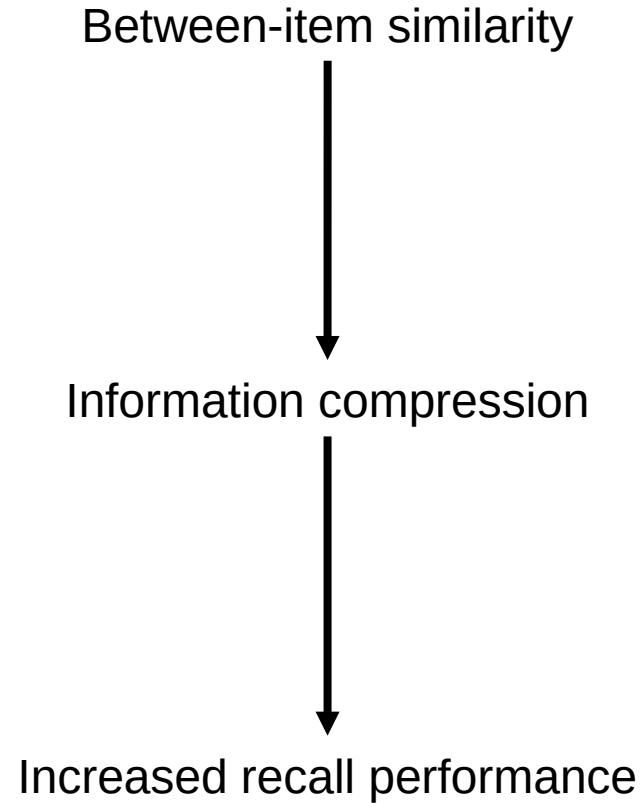

Son et al. (2020)

Between-item similarity enhances WM performance

Son et al. (2020)

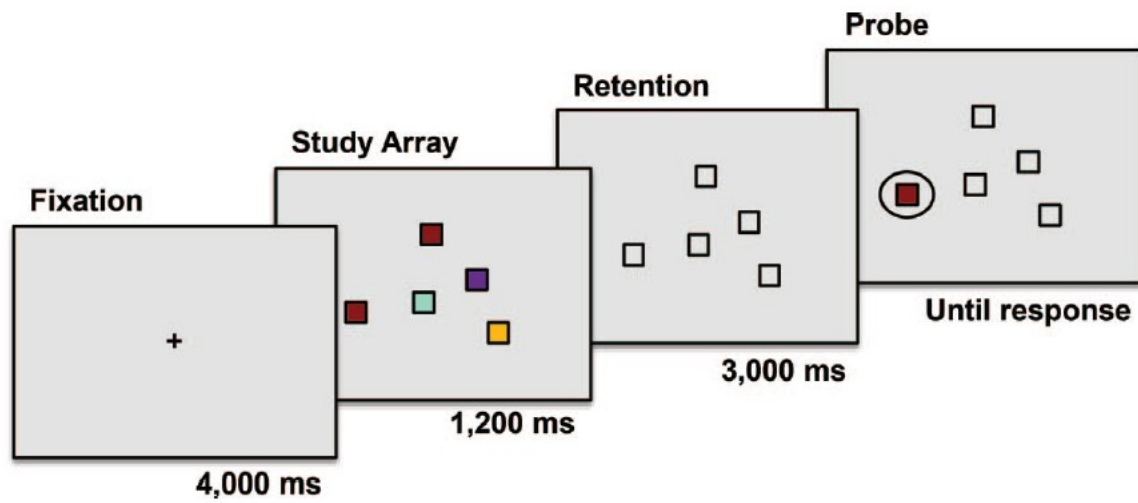

Chekaf et al. (2016)

Prediction:

Between-item similarity should enhance recall performance for other, dissimilar items.

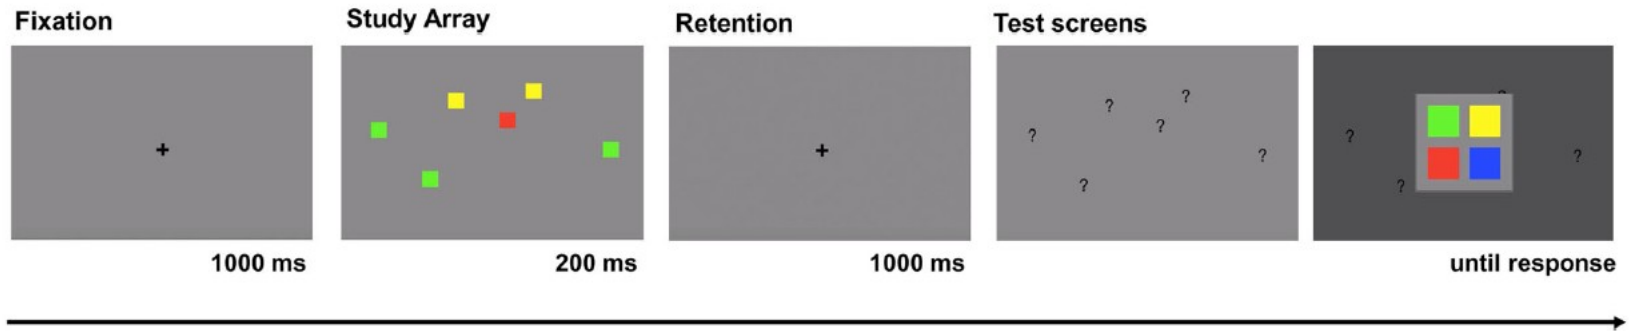

# Introduction

Morey et al. (2015)

# Introduction

Ramzaoui & Mathy (2021)

**But:**

Simultaneous presentation

Sequentiality?

## **Aim:**

Temporal dynamic

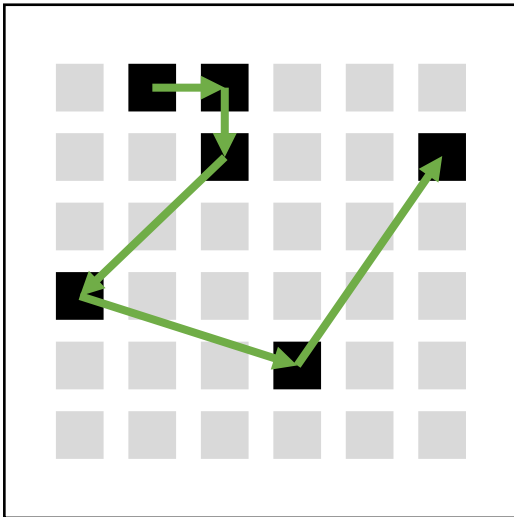

**Visuospatial** (Exp.1) and **visual** (Exp.2) domains

## Experiment 1

Similarity characterized by spatial proximity

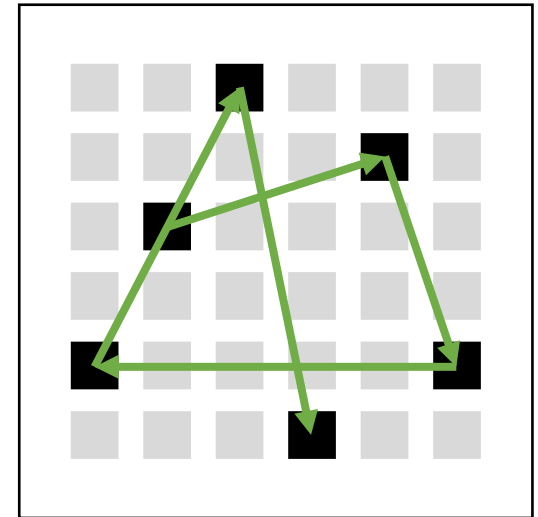

S1

S2

NS

20 trials / condition

## Experiment 2

Complex articulatory suppression throughout the task (encoding + recall)  
« Ba be bi bo bu »

# Methods: visual domain

**S1**

**S2**

**NS**

20 trials / condition

# Results: visuospatial domain

# Results: visuospatial domain

Proactive effect

Condition

- S1
- S2
- NS

# Results: visuospatial domain

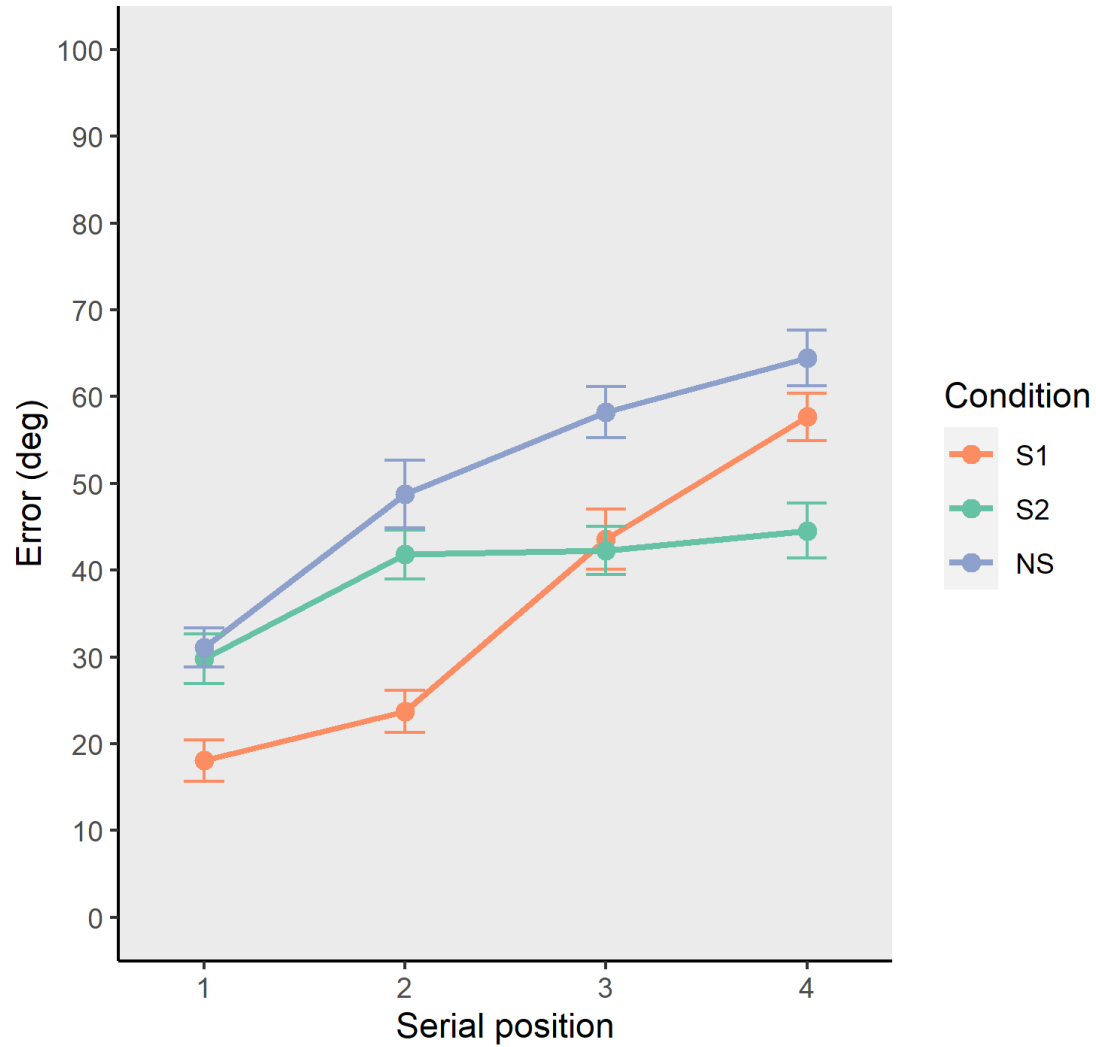

Proactive effect

No retroactive effect

- NS

Between-item similarity enhances WM performance.

**Critically**, it also enhances WM performance for other, dissimilar items.

 Free-up of WM capacity/resources

Between-item similarity enhances WM performance.

Compression  
Summary statistics (Alvarez, 2011)

## Critical role of the temporal dynamics

Proactive impact

No retroactive impact

# Discussion

Oberauer & Lewandowsky (2011)

## TBRS\*C architecture

## **Domain-general property**

**Chunks** (Thalman et al., 2019)

**Word frequency** (Miller & Roodenrys, 2012)

**Semantic relatedness** (Kowialiewski et al., 2021)

**Phonological similarity** (Kowialiewski et al., *submitted*)

**Time** (Mizrak & Oberauer, 2021)

**Encoding-resource mechanism** (Popov & Reder, 2020)

**Chunks** (Thalman et al., 2019)

**Word frequency** (Miller & Roodenrys, 2012)

**Semantic relatedness** (Kowialiewski et al., 2021)

**Phonological similarity** (Kowialiewski et al., *submitted*)

**Time** (Mizrak & Oberauer, 2021)

Between-item similarity frees up WM capacity

Critical role of the temporal factors

The origin of this free-up effect remains to be formally established

Thank you for your attention

Dr. Sophie Portrat

Dr. Benoît Lemaire
