

Interactive Digital Learning Tools

Enhancing Critical Thinking and Problem-Solving Skills in
First-Year Undergraduate Life Sciences Students

Outline

Imagine you are a first-year veterinary student ...
What would you think about your organic chemistry course?

You're probably not flocking into chemistry, thirsting for knowledge!

Background

Engaging students is challenging!

- Chemistry is difficult, less relevant
- A mandatory hurdle
- Thought to be unrelated to future healthcare careers

However ...

Analytical thinking, critical thinking, and problem-solving skills are crucial!

- ⇒ Train students with a chemistry-based subject that mimics diagnostic process.
- ⇒ Digital technologies can help enhance students' learning experiences, motivation, and soft skills

Aims

Develop & assess the impact of
innovative approaches to
teaching chemistry

Enhance ...

Motivation & autonomy

Make chemistry more engaging and relevant to students' future careers

Critical thinking & argumentation skills

Use interactive problem-solving tasks designed to promote deep procedural knowledge through more productive practice

Adaptability

Explore the role of digital tools in diversifying learning and assessment methods

Methods

Diagnosis

Construction of a claim
based on interpreting signs
(symptoms) and evidence
(e.g., blood test,
electrocardiograms,
imaging)

Molecular Structural
Analysis

Construction of a claim
based on interpreting
relevant information
from spectroscopic data

Replace traditional textbooks

- Static images
- Need to highlight some clues

Interactivity

- Zoom in on data
- Explore clues independently

Benefits

- Asynchronous
- Self-paced
- Flexibility
- Adaptability

⇒ Student can then focus on the entire reflexive process

Made by students ... For students ...

Welcome to the ULgSpectra Web Application

ULgSpectra is a spectra visualization tool of the Chemistry department of the University of Liège, Belgium. Its features include the display and the manipulation (integration, zoom, superpositon etc.) of the following types of spectra:

- Proton and carbon NMR (1-D NMR)
- HSQC, HMBC and COSY NMR (2-D NMR)
- Infrared
- EI-MS

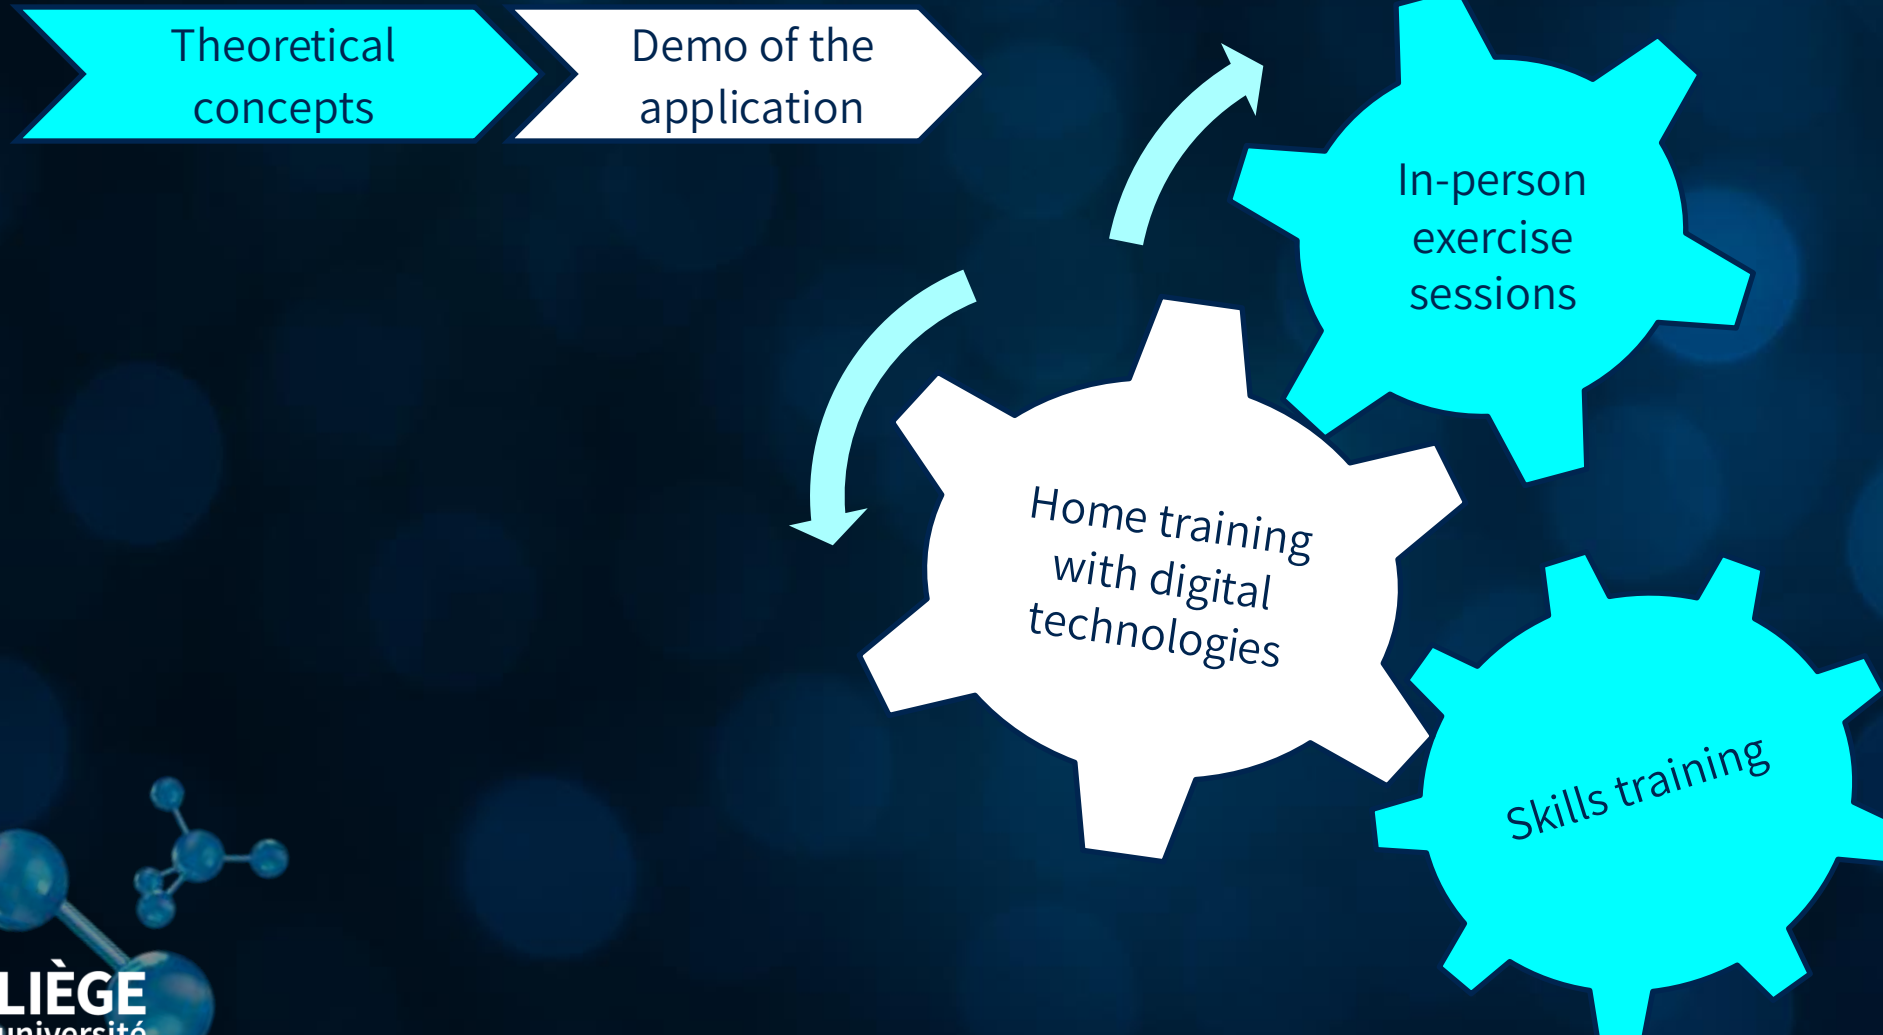

ULg Spectra

About

© University of Liège

New pedagogical engineering

Results

Positive student perceptions,
improved performance and
greater pedagogical flexibility

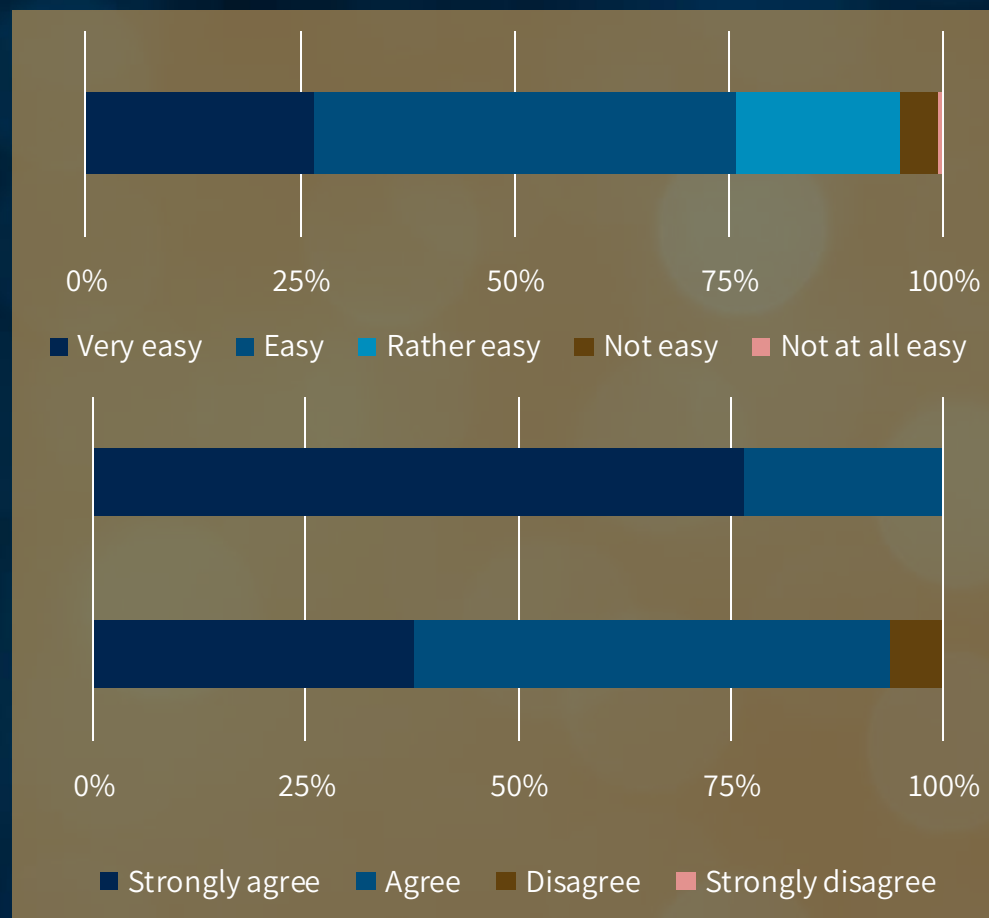

Positive students' perceptions

Is the interactive Web Application easy to use ?

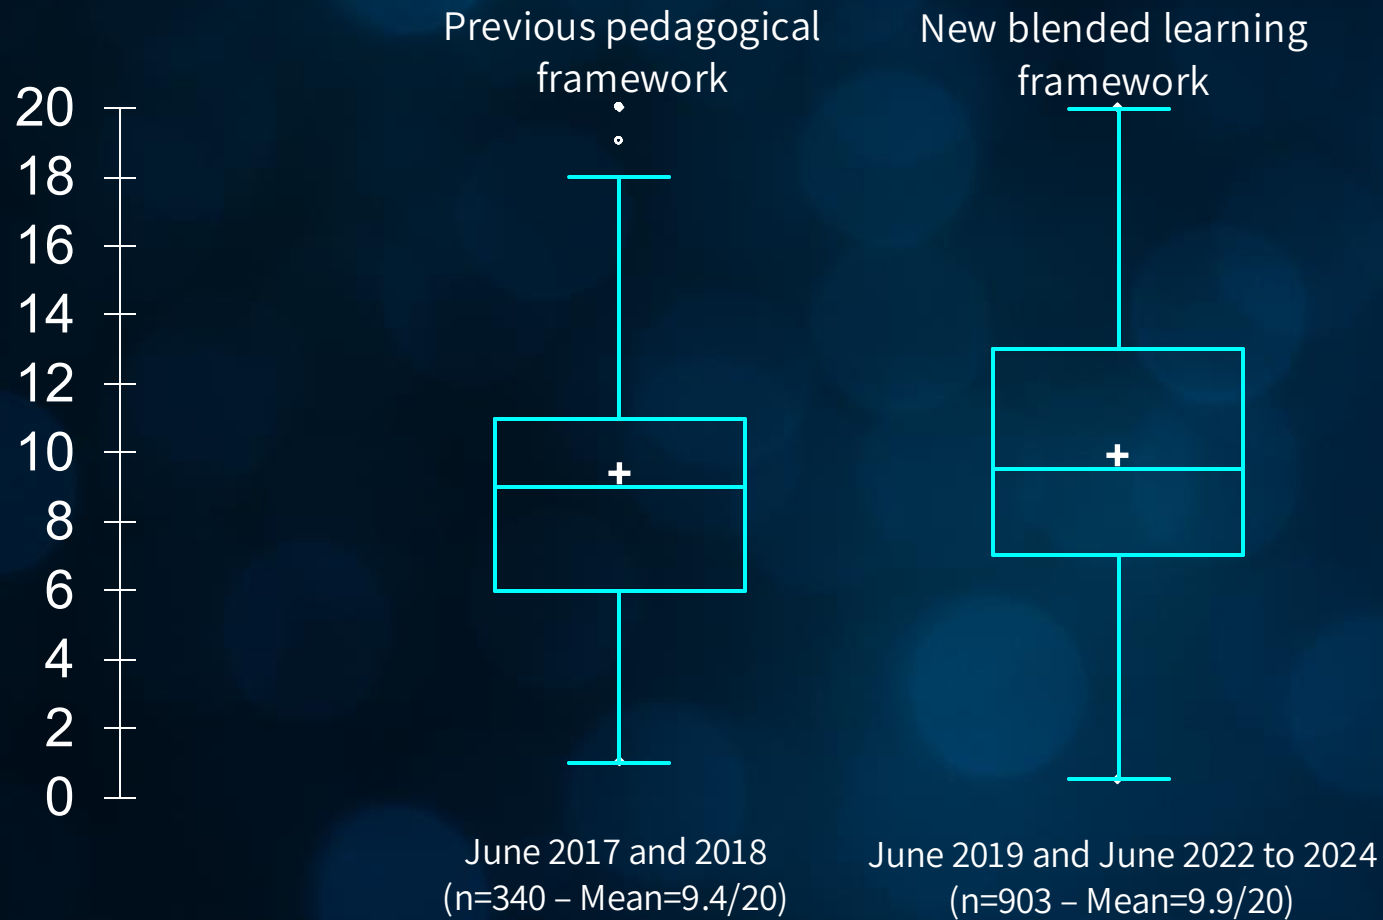

I think that online exercises are useful

ULg Spectra application help me read and handle the spectra

(n = 162)

Students' performance

Statistically significant increase of performance (Mann-Whitney U test, $p = 0,040$)

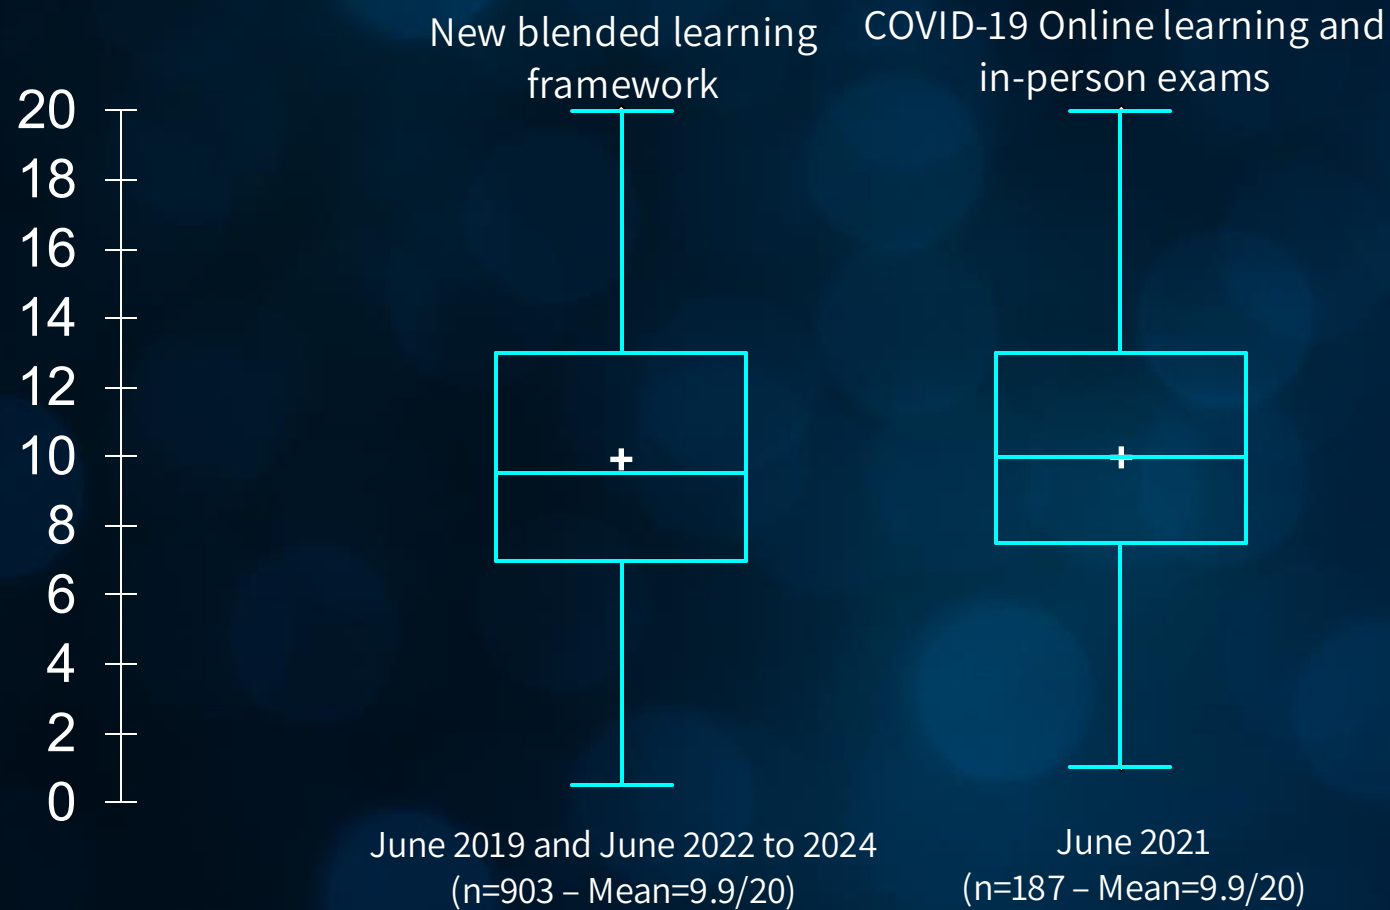

Box plot of students' exams performance illustrating mean grades (+) and first and third quartiles

Students' performance and pedagogical flexibility

Box plot of students' exams performance illustrating mean grades (+) and first and third quartiles

Students' performance and pedagogical flexibility

Successful
adaptation to a
synchronous online
format

Box plot of students' exams performance illustrating mean grades (+) and first and third quartiles

Future perspectives

Clarify and emphasize chemistry's
relevance to real-life healthcare tasks

More meaningful
feedback for students

Reasoning Across Disciplines

Diagnosis

Molecular Structural
Analysis

I brought a veterinarian into the classroom to help students draw clear parallels between diagnosing a patient and analyzing molecular structures.

Simone the dog is sick. How do you figure out what's wrong?
It's tricky — so many possible explanations.
Luckily, a vet is here to guide us through it in class.

Reasoning Across Disciplines

Diagnosis

Molecular Structural
Analysis

Both require careful interpretation of evidence – a shared logic,
reflected like a mirror

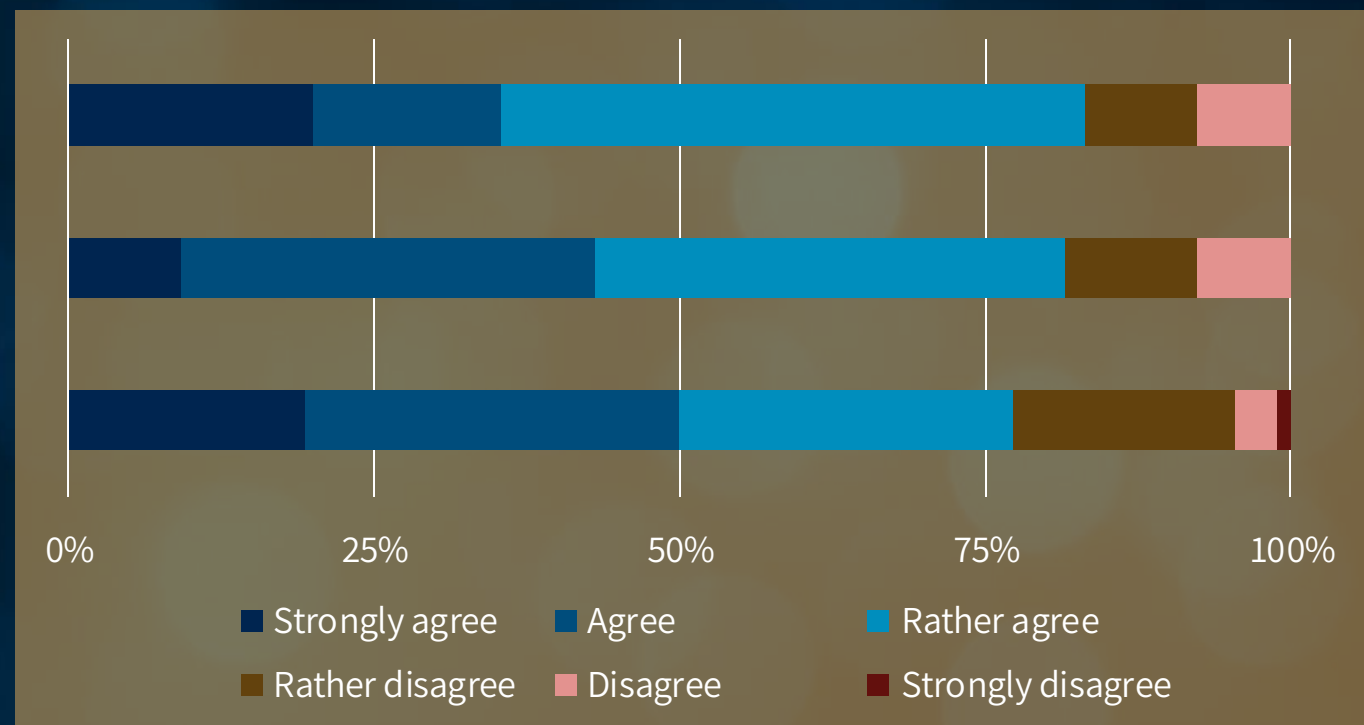

Positive students' perceptions

I think the veterinary surgeon's contribution to the organic chemistry course was useful

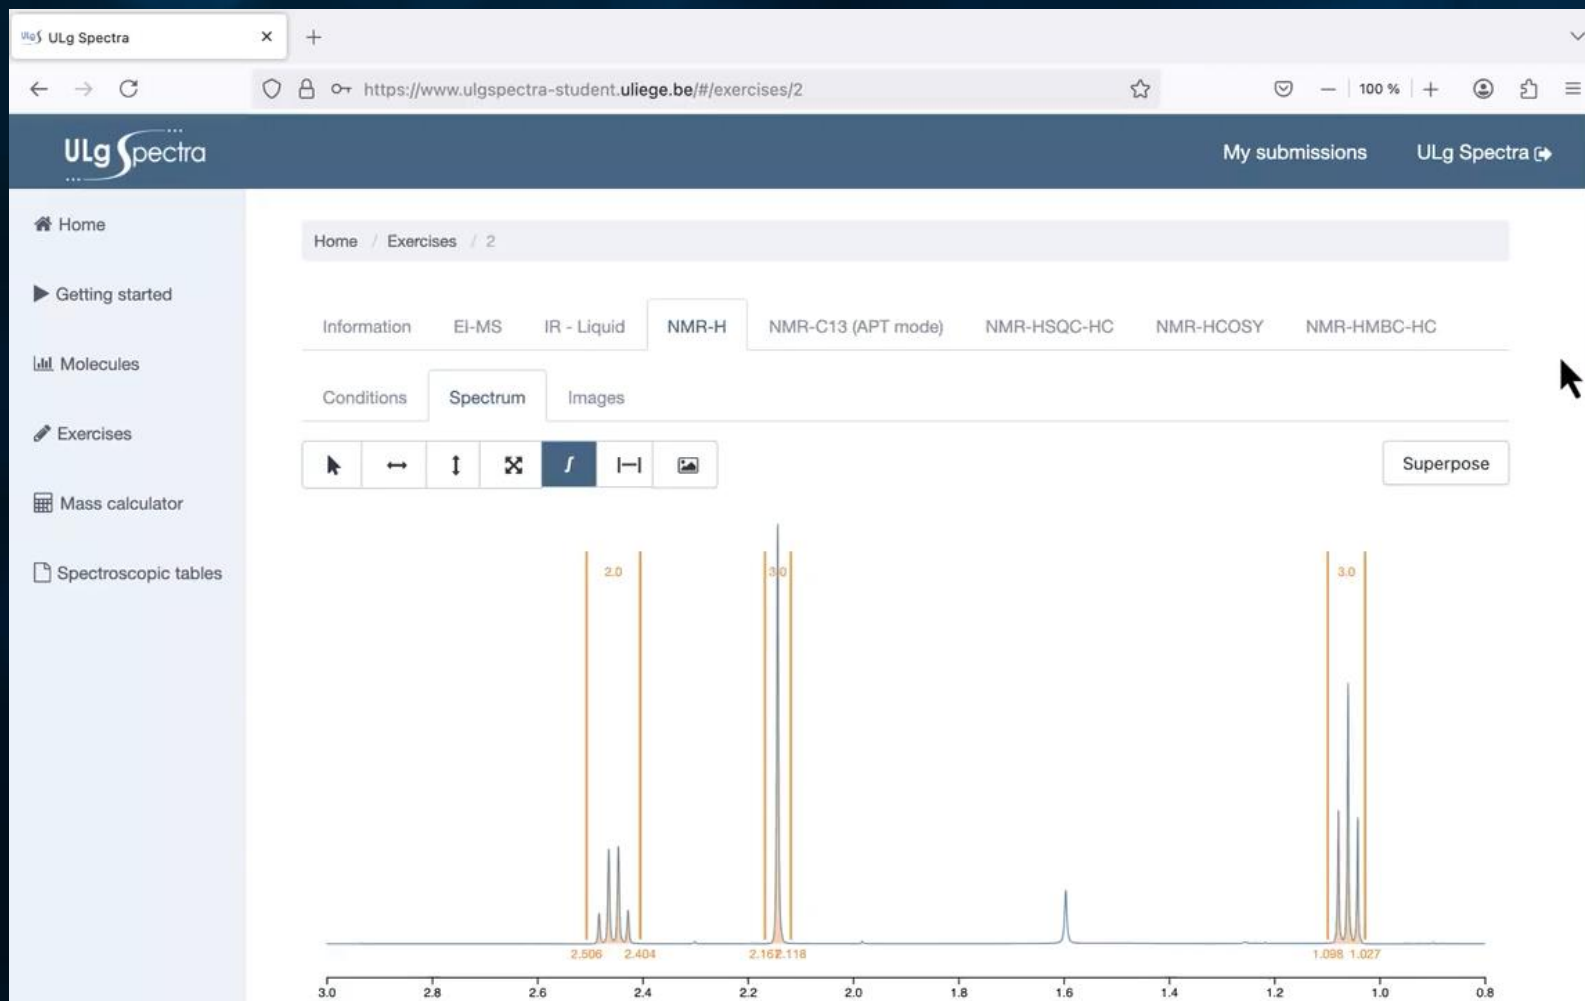

This contribution increased my motivation

I think that the reasoning skills developed in structural analysis will be useful to me

(n = 88)

More meaningful feedback for students

Preliminary students' perceptions

I think online exercises on the new ULg Spectra platform are useful

I think the new answer correction module integrated into ULg Spectra is useful

This new module motivated me to use ULg Spectra

(n = 88)

Conclusion

Diagnosis and molecular structural analysis are both based on evidence-based reasoning

- ⇒ We should consider explicitly drawing parallels between course content and the professional roles students are preparing for!
- ⇒ By aligning our teaching with students' professional aspirations, we help them find deeper meaning and motivation

Conclusion

Digital tools enhance

- Student engagement in evidence-based argumentation
- Problem-solving skills
- Motivation (semi-gamification)
- Adaptability to different teaching environments (face-to-face, blended, and distance learning), including successful online adaptation (with synchronous online exercises sessions) during pandemic

The background of the slide is a dark blue gradient with faint, stylized molecular structures in a lighter blue color. These structures are composed of spheres representing atoms and lines representing bonds, scattered across the corners and edges of the slide.

Thank you!
