PIANC WORKSHOP – Innovation in Navigation Lock Design –

15th & 17th October 2009
in Brussels

(25th Anniversary of PIANC Belgian Section)

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

LOCK INNOVATIONS

The PIANC report n°106 (2009):

- Complement to PIANC 1986 report.
- **Targets: innovations and changes occurring since 1986**

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

NEW LOCK INNOVATIVE TOPICS

- Hydraulics (filling and emptying),
- Operations and Maintenance,
- Environmental,
- Design (concrete, foundation, gate,...),
- Construction Modes,
- Equipments,
-
- Design concept : Cost-Effective, Reliable,.....

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

WG29 – Navigation Locks

- Locks are key structures for the development of commercial and leisure navigation in rivers and canals.
- Locks are also strategic infrastructure for port development.
- In low-lying countries, locks have an important function in flood defence.

Workshop 15-17 Oct 2009, Brussels

WG29 - LOCK INNOVATIONS

Major changes in design since 1986 concern:

- **Maintenance and Operation aspects,**
- **New goals** at the conceptual design stages of a lock
 - ➔ **RELIABILITY , LIVE CYCLE COST, ...**
- **Renovation and rehabilitation** of existing locks are also key issues for the future.

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

DESIGN AND OPTIMIZATION GOALS

Main design objectives governing the design of a lock are:

- **Reliability** - system, structures and operations,
 - Reduced duration of a lock cycle times,
 - Reduced water motions and mooring forces
 - Avoid water resource problems (minimise water use) → Water Saving Basins
 - Saltwater intrusion
- **Reduced life cycle cost**
 - Minimizing energy use
 - Avoid negative environmental impact
 - Minimize impacts to navigation and local community
- **Safety and Security**

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

Early design stage

Key points at Early Design Stage are:

- Lock layout & Lock dimensions ,
- Life cycle of a lock ,
- Construction Modes or Methods,
- Layout of the hydraulic system,
- Lock structure concepts ,
- Salt water intrusion, Ice Control, Communication, Security and Safety, ...

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

DESIGN PRINCIPLES

1. “**Risk based design**” versus “Deterministic approach”
2. “**Life cycle cost optimisation**” versus “Least construction cost”
3. Use of “**Numerical Modelling**” as design tool (combined with physical model)

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

LAYOUT OF HYDRAULIC SYSTEM

Hydraulic systems for filling and emptying locks can be divided into two types:

- ➔ *Through the heads*
- ➔ *Through longitudinal culverts*

Typical layouts of Longitudinal culvert system:

- *Wall culvert side port system*
- *Wall culvert bottom lateral system*
- *In-Chamber longitudinal culvert system (ILCS)*
- *Longitudinal culverts under the lock floor*
- *Dynamically balanced lock filling system*
- *Pressure chamber*

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

LAYOUT OF HYDRAULIC SYSTEM

**Lock with Water saving basins located on the side of the lock
- Standard concept**

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

NEW LAYOUTS OF HYDRAULIC SYSTEM

Connection of pressure chamber to WSBs basins (upper) and to main chamber (lower) → Germany

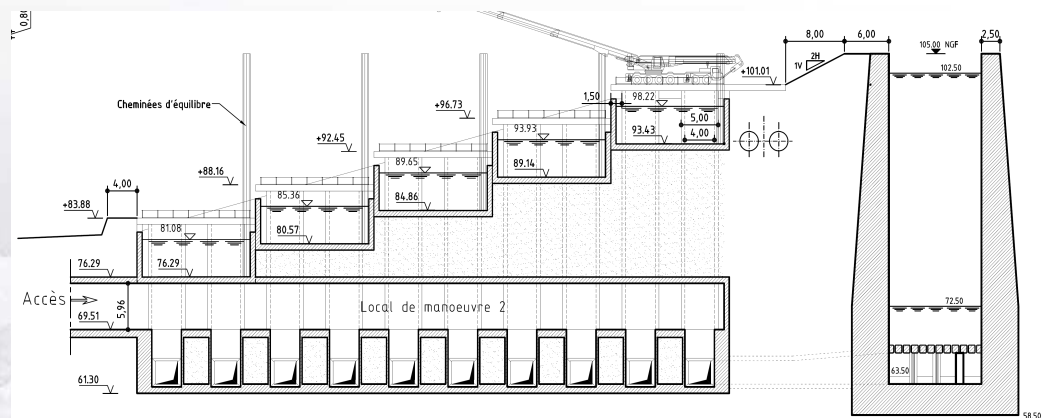

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

Water Saving Basins (WSBs)

Various types of Water Saving Basins.

Workshop 15-17 Oct 2009, Brussels

PIANC Setting the course

Water Saving Basin (WSB)

Locks with separated WSBs (located on one side or both sides of the lock, on a series of steps)

Workshop 15-17 Oct 2009, Brussels

PIANC Setting the course

Water Saving Basins (WSBs)

Cross-sections in a lock with 5 standard laterally located Water saving basins (filling through the pressure chamber in the lock floor)

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

Integrated WSBs

The integrated system which integrates the WSBs in the two side walls, and makes the lock structure more stiff, compact and less land consuming.

Lock sidewalls with integrated WSBs

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

Monolith LOCK

**Standard Concept
With dilatation joints**

No internal longitudinal stresses

**Monolith Concept
Without dilatation joints**

Internal longitudinal stresses

Workshop 15-17 Oct 2009, Brussels

Complementarities between modeling

STEP	PHYSICAL MODEL	NUMERICAL MODEL
1	Definition of the problem Identification of the essential acting forces	
2	Formulation of similarity requirements	Formulation of sets of equations
3	Formulation of boundary conditions	
4	Construction of a model	Development of a numerical solution scheme
5	Calibration of the model	
	Variation of roughness	Variation of coefficients
6	Measurements & solution	Calculation and solution
7	Optimization of the solution according to problem formulation	
	Model geometry variations	Variation of input data
8	Transfer of results from model to prototype and examination by field measurements

Mechanical devices

Actuator:

Sluice : Sliding vertical lift gate
UHMWPE : Ultra-high molecular weight polyethylene

WALL TRACK ARRANGEMENT

SCALE: 3" = 1'-0"

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

Construction Modes

The lock chamber is constructed on the ground surface.

When complete the soil is removed beneath the lock chamber and it is lowered into its final position.

→ Prefabrication

Workshop 15-17 Oct 2009, Brussels

PIANC
Setting the course

InCom WG 29 CONCLUSIONS

Current Trade off problems in Lock Design:

➔ “HIGH RELIABILITY” is often associated with “PROVEN TECHNOLOGIES” (in Lock Design)

If true ➔ Is it a the place for innovation in lock?

WG29 ➔ Yes. Innovation is required to reach highly reliable infrastructures, to reduce cost (construction mode), fulfil new requirements (fast locking), non standard dimension,...

Do not be afraid by innovation. ➔ Promote innovation.

➔ “RELIABILITY” versus “COST” (in lock design)

Lock design is highly “Project Dependant”.

Ex: “Panama Canal” versus the “Renovation of a small pleasure lock in Finland”
