DISCUSSION

...non-specific or unusual antigen-presenting cells. This has led to the development of alternative intervention strategies, including the use of specific antigen-presenting cells. These strategies have shown promise in preclinical studies, but further research is needed to evaluate their efficacy in clinical settings. A summary of the key findings from these studies is provided below:

- **Antigen-Presentation Strategies**
  - Intracellular delivery of antigen
  - Exogenous antigen presentation by dendritic cells
  -收取并将其带到特定区域，进行更深入的分析。
