

PREVENTION DE LA FIBRILLATION AURICULAIRE RECIDIVANTE ET
RESYNCHRONISATION BI-ATRIALE. Evrard P, Sakalihassan N, Garcia R, Van Laere A,
Patterson B Rev Med Liege 1999, 54(6),522-526 [Résumé français non disponible]
After conversion of atrial fibrillation, it is important to maintain sinus rhythm. In
addition antiarrhythmic drugs, biatrial resynchronization seems to prevent recurrences
of atrial fibrillation in patients with interatrial conduction block: local experience Aged,
Aged 80 and over, Anti-Arrhythmia Agents, therapeutic use, Atrial Fibrillation, diagnosis,
